Obtaining Updates

New release 4.8.3 firmware and documentation can be accessed at Raritan's Paragon II support page:
http://www.raritan.com/support/Paragon-II/.   Please download the compatibility matrix from this same location and review it before proceeding with your installation of release 4.8.3.

New Feature / New Part Number

New Paragon Equipment/Firmware with SIPRNet Card Support

The Secret Internet Protocol Router Network (SIPRNet) is a system of interconnected computer networks used by the United States Department of Defense and the U.S. Department of State to store and access classified information.

As per DoD directives, SIPRNet cards (also known as tokens) must be used to access SIPRNet systems in 2013.   In version 4.8.3, Paragon supports these SIPRNet cards/tokens via new firmware, and new hardware versions of the P2-EUST/C, P2CIM-AUSB-C, and P2ZCIM-USB-C.

Customers wanting to use SIPRNet cards/tokens to access classified systems via Paragon must purchase P2-EUST/C, P2CIM-AUSB-C or (P2ZCIM-USB-C) with the versions indicated above.

New Part Number: P2-EUST/NC, Paragon II video enhanced user station supports smart card and non-classified CAC.

For the customer who doesn't need the SIPRNet feature, we have created a new part number with a lower list price .   The part number below will be released on the next price list.

Part number	Description	US List Price
P2-EUST/NC	Paragon II Enhanced User Station with integrated Smart Card/Non-classified Common Access Card reader -- Analog access point providing enhanced video performance; for USB consoles. Limited stock for order.	US$1,295

Notice:

Please note. The P2-EUST/NC is a temporary model with limited stock. It will be terminated after the stock runs out.
