#### FCC Information

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a commercial installation. This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential environment may cause harmful interference.

#### VCCI Information (Japan)

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。

Raritan is not responsible for damage to this product resulting from accident, disaster, misuse, abuse, non-Raritan modification of the product, or other events outside of Raritan's reasonable control or not arising under normal operating conditions.

# Chapter 1 Introduction

CommandCenter Secure Gateway (CC-SG) provides a hardware-based management solution engineered to consolidate secure access and control of IT devices. It provides centralized management of serial, KVM and power control devices in multiple data centers, branch offices and remote locations via a single, secure browser-based access. Users can access target servers and systems (nodes) that are connected to Raritan devices, such as Dominion KX or IP-Reach.

In this guide, the term “Raritan devices” refers to the following equipment:

- Dominion KX
- Dominion KX II
- Dominion KX101
- Dominion KSX
- Dominion SX
- IP-Reach (all models)

---

**Within CC-SG, target servers and systems are called nodes.**

---

## In This Chapter

Prerequisites.....	5
Intended Audience.....	5
CC NOC Deployment and Paragon Integration .....	6

---

## Prerequisites

This guide provides comprehensive instructions on deploying Raritan devices that are managed by CC-SG.

Additional installation information on Raritan devices and CC-SG is available on the User Manuals & Quick Setup Guides CD-ROM, or online in the Support section of the Raritan website.

---

## Intended Audience

This guide is written for installation engineers and technicians installing Raritan devices and provides installation procedures and all relevant information that is needed to install CC-SG and its managed devices for a typical environment. Please read all pertinent information in this guide before starting installation of any products.

---

## CC NOC Deployment and Paragon Integration

CommandCenter NOC (CC NOC) and integration with Paragon II systems (P2-SC) are NOT covered in this guide. See the **Deployment Guide** that came with your CC NOC or P2-SC unit.

## Chapter 2 Pre-Deployment Planning

### In This Chapter

Prepare Infrastructure.....	8
Prepare Network.....	9
Prepare Target Servers .....	10
Prepare User PC .....	10

---

## Prepare Infrastructure

Planning for the installation of your CC-SG and Raritan devices is very much like the planning for any other new systems in your datacenter. HVAC, power, physical access and mounting, network, cabling, and remote access must be considered.

- **Heating and Cooling.** It is essential to have adequate heating and cooling so that the equipment can operate in the temperature and humidity ranges for which it has been designed. Please refer to the specific product User Guide for additional information.
- **Power Supplies.** Raritan products have auto-ranging power supplies so they can function in most datacenter environments. Some products have dual power supplies for power redundancy such as CC-SG.
- **Serial Device Connectivity.** Uses either a straight through Ethernet cable or a crossover cable. Sun and Cisco serial interfaces typically use a crossover cable that connects directly to an RJ45 port. Other serial targets typically use a standard Ethernet cable attached to a DB9 or DB25 serial connector.
- **Cabling Requirements.** Depends on the specific products deployed as well as datacenter distances and structured cabling design. Cables should be tested and within distance limitation guidelines for each device. IP-Reach, Dominion KSX, and Dominion KX101 devices should use Raritan-supplied KVM cabling.
- **LAN Ports.** All Raritan devices covered in this guide have an auto-sensing 10/100 Base-T network port for attachment to your LAN. Some devices, including CC-SG, have dual-LAN ports for redundancy. Some Raritan devices also have gigabit Ethernet.
- **Remote Access for Raritan Devices.** External remote access for some devices, in an emergency situation, can be accommodated via modem. Appropriate phone lines and modems should be obtained prior to installation.
- **Rack Mounts.** Most Raritan devices include rack mounts for installation into datacenter cabinets and racks. Some devices, such as the Dominion SX4 and SX8, have optional rack-mount kits available. Please refer to the specific product User Guide or Deployment Guide for additional information.

---

### Basic Requirements for Dominion Products

All Dominion products include rack mounts for installation in standard 19 inch cabinets. Standard included power cables are for 110 VAC/15 amp receptacles. Power supplies are 110/220 auto switching.

- Dominion KX devices use standard CAT 5 or better cabling for connecting between the target and Dominion KX. The standard supported distance is 150 feet. Each target requires a CIM.
- Dominion SX serial devices use standard CAT 5 or better cabling for connecting to serial devices. Raritan DB9/DB25-RJ45 adapters need to be connected to the device serial port for connection to the CAT 5 cable. Serial devices that use a RJ45 rollover interface should be connected directly to the Dominion SX with a rollover cable. This applies to most Cisco and Sun products. Use a 1 foot Raritan rollover adapter cable to allow the use of standard CAT 5 or better cabling for these type devices.

---

## Prepare Network

Network preparation is essential for Raritan devices and CC-SG to function properly over your LAN/WAN.

---

### Allocate IP Addresses for Raritan Devices

IP addresses must be allocated and statically assigned for all Raritan devices. To eliminate any possible address conflicts, first test any allocated IP address to make sure it is not currently being used. See **Installation Template** (on page 53) to document the IP addresses, default gateway, subnet mask, and administrative username and password for each device. This information is needed during setup and configuration.

---

**Note:** *Dominion devices support 10/100 Ethernet. It is strongly recommended that all Dominion KX devices be hard coded on both the Dominion KX and Ethernet switch to eliminate auto negotiation problems.*

---

---

### Open Ports for Firewall or IP Port Filters

Raritan devices are accessed from a standard web browser. If a firewall or IP port filter is enabled between the user PC, CC-SG, and Raritan devices, ports must be opened to allow connectivity. See **CC-SG and Network Configuration** (on page 62).

---

## Prepare Target Servers

Target servers and systems that attach to KVM over IP Raritan devices, for example, Dominion KX, Dominion KX II, Dominion KX101, Dominion KX2-101, Dominion KSX, Dominion KSX II, and IP-Reach, must have mouse and video settings adjusted for optimal performance and responsiveness over an IP network. This allows CC-SG to remotely control the target systems.

Adjust the mouse and video settings before connecting the target to the Raritan device.

---

### Target Server Video Resolution

Ensure that each target server's video resolution and refresh rate is supported and that the signal is non-interlaced. Please refer to the specific Raritan product's User Guide for supported video resolutions. All Raritan devices support at least the following video resolutions:

640 x 480 @ 60Hz	800 x 600 @ 56Hz	1152 x 864 @ 60Hz
640 x 480 @ 72Hz	800 x 600 @ 60Hz	1152 x 864 @ 70Hz
640 x 480 @ 75Hz	800 x 600 @ 72Hz	1152 x 864 @ 75Hz
640 x 480 @ 85Hz	800 x 600 @ 75Hz	1152 x 900 @ 66Hz
	800 x 600 @ 85Hz	
720 x 400 @ 70Hz		1280 x 960 @ 60Hz
720 x 400 @ 85Hz	1024 x 768 @ 60Hz	1280 x 1024 @ 60Hz
	1024 x 768 @ 70Hz	
	1024 x 768 @ 75Hz	
	1024 x 768 @ 77Hz	
	1024 x 768 @ 85Hz	

---

## Prepare User PC

Raritan devices and CC-SG are accessed via a web browser from a user's PC. The browser must have the correct version of Java Runtime Environment (JRE) installed to function correctly with Raritan devices. You must also disable all pop-up blockers and any firewall software that is enabled by default.

---

### **Install Java Runtime Environment**

Install the currently approved version of Java on all PCs that are using CC-SG. You can download Java from

**<http://java.sun.com/j2se/index.jsp>** <http://java.sun.com/j2se/index.jsp>.

For the most current listing of compatible browsers, PC platforms, and JRE versions, please refer to the Compatibility Matrix for your version of CC-SG in the Support section of the Raritan website.

# Chapter 3 Prepare Raritan Devices

The Raritan devices must be configured and installed on the network prior to adding the devices to CC-SG.

Basic installation and configuration consists of the following steps:

1. Attach power cord and local access method, such as KVM drawer or laptop.
2. Set device IP address.
3. Connect devices to network.
4. Attach CIMs to targets, and then attach targets to devices. Target servers should be powered on and connected to CIMs and CIMs should be connected to the Raritan device before configuring the ports in CC-SG. Otherwise, the blank CIM name overwrites the CC-SG port name. Servers may need to be rebooted after you connect the CIM, depending on the type of CIM.

---

*Note: The Dominion KX101 and KX2-101 are attached directly to one target and therefore, does not require a CIM.*

---

5. Document the device IP address, device name, administrative username and password, device location, and attached servers and systems (port number, system name, system type). You can use the form provided in **Installation Template** (on page 53) as a guide. You will need this information when you add the devices to CC-SG.

## In This Chapter

Local Console or Web Browser Access.....	12
Default IP Address and Logins .....	13
Direct Access is Restricted .....	13
Fall Back to Stand-alone Mode.....	13
Minimum Firmware Version .....	14
Preparing Dominion Devices for CC-SG Management .....	14
Preparing Dominion PX Devices for CC-SG Management .....	39
Preparing IP-Reach Devices for CC-SG Management.....	46

---

## Local Console or Web Browser Access

Most Raritan devices allow direct access via a local console to which you can attach a keyboard, video, and mouse, or via a web browser when operating in standalone mode (without CC-SG). You can use either of these mechanisms to access administrative functions for configuration of the Raritan device.

---

## Default IP Address and Logins

- All Raritan IP-based products use the default IP address: **192.168.0.192**.
- The default IP address to access CC-SG administrative functions is **192.168.0.192/admin**.
- Most Raritan products use the default username **admin** and password **raritan**.
- CC-SG's default login for versions 3.1 and higher is username **admin** and password **raritan**. CC-SG versions prior to 3.1 use the default username **ccroot** and password **raritan0**.

---

## Direct Access is Restricted

Once a device is added to CC-SG, direct access to that device is prevented (except for Dominion SX devices, which you can configure to allow local access even while under CC-SG control). Restricting direct access helps keep your devices secure.

Because of this security feature, it is very important to configure any options and settings appropriately before adding devices to CC-SG.

► **To gain direct access to a device under CC-SG management:**

Use CC-SG's Pause Management feature to release a device from CC-SG management temporarily.

See Raritan's *CommandCenter Secure Gateway Administrator Guide* for additional information.

---

## Fall Back to Stand-alone Mode

Should CC-SG become unreachable from a device for the amount of time configured as the heartbeat timeout (loss of connectivity by either a network or CC-SG failure), the device automatically falls back to stand-alone mode. This feature allows the device to continue functioning even during network outages. This feature also allows you to access the device from the console port or a browser to perform administrative functions if needed (disconnect the device from the network and use the console or a crossover network cable for browser access). Make sure all devices have a suitable configuration for stand-alone mode should you need to access them during a network outage.

## Minimum Firmware Version

Raritan devices managed by CC-SG must have the current minimum firmware version to work correctly with CC-SG. Once you add Raritan devices to CC-SG, you can perform firmware upgrades from the CC-SG interface. See the Compatibility Matrix for CC-SG in the Support section of the Raritan website.

## Preparing Dominion Devices for CC-SG Management

Prior to installation, please read the entire section for each device that will be managed by CC-SG.

*Note: Consult the Quick Setup Guides for Dominion KX, Dominion KX II, Dominion KX101, Dominion KX2-101, Dominion SX, Dominion KSX, and Dominion KSX2 for additional information on configuration.*

### Dominion KX Devices

The following section provides you with the necessary background information and steps to install and configure Raritan Dominion KX units to conform to CC-SG's requirements.

*Note: Be sure to document the device name, IP address, administrative username and password, and attached systems (port number, type, system name) in **Installation Template** (on page 53).*

Diagram Key	
1	AC Power Cord
2	Modem Port (optional)
3	LAN 1 Network Port

4	Local Access Console Ports
5	Server Ports

► **Attach Power Cord and Local Console**

1. Connect the included AC power cord to the Dominion KX unit and plug into an AC Power Outlet.
2. Attach a multisync VGA monitor, mouse, and keyboard to the ports labeled Local User using either a PS/2 keyboard and mouse or a USB keyboard and mouse.
3. Power ON the Dominion KX unit. The device powers up and begins the boot process.

► **Set Dominion KX IP Address**

After completing the boot process, you will see the Dominion KX's local access On Screen Display (OSD).

1. Log in with the default username (admin) and password (raritan).
2. Press the F5 key to activate the Administrative Menu.
3. Select option 3 Network Settings, and then press ENTER to display the screen.
4. Specify the IP address, subnet mask and default gateway for this Dominion KX unit.

```

Raritan
Network Settings

IP Address: 192.168.000.192
SubnetMask: 255.255.255.000
Gateway:    000.000.000.000
MAC Layer Parameters
Autonegotiate [Yes]

↑/↓ to move up/down. S to
save. Enter to select.
F1 for other help

```

5. Press the S key to save the settings. The Dominion KX unit will automatically reboot.

▶ **Connect to Network and Attach Servers**

1. [Optional] Use a straight-through serial cable to connect an external modem.
2. Connect one end of a straight-through Ethernet cable (included) to the port labeled LAN1 on the Dominion KX, and the other end to a network switch or router.
3. [Optional] For Ethernet redundancy, use a straight-through Ethernet cable to connect the LAN2 port to another network switch or router. Should the Ethernet connectivity on LAN1 become unavailable, Dominion KX will failover to this port with the same TCP/IP settings - at all other times, this port will be disabled.
4. [Optional] Attach a keyboard and mouse (either PS/2 or USB), and a multi-sync monitor to the corresponding ports in the back of Dominion KX marked Local User. The Local User Console is used to access servers directly from the rack.
5. Connect one end of a standard, straight through UTP cable (Cat5 / 5e / 6) to an unoccupied server port; connect the other end to the RJ45 ports on a Dominion KX CIM.
6. Connect the remaining ports on the CIM to the corresponding KVM ports of a server that you want to manage using the Dominion KX.
7. Repeat these steps to connect all servers that you want to manage with this Dominion KX.

---

## Dominion KX II Devices

The following section provides you with the necessary background information and steps to install and configure Raritan Dominion KX II units to conform to CC-SG's requirements.

---

*Note: Be sure to document the device name, IP address, administrative username and password, and attached systems (port number, type, system name) in **Installation Template** (on page 53).*

---

### ▶ Attach Power Cord and Local Console

1. Attach the included AC power cord to the Dominion KX II and plug into an AC power outlet.
2. Attach a multi-sync VGA monitor, mouse, and keyboard to the respective Local User ports using either a PS/2 or USB keyboard and mouse.

### ▶ Set Dominion KX II IP Address

1. Power ON the Dominion KX II using the power switch at the back of the unit. Please wait for the Dominion KX II unit to boot. (A beep signals that the boot is complete.)
2. Once the unit has booted, the KX II Local Console is visible on the monitor attached to the Dominion KX II local port. Type the default username (admin) and password (raritan) and click Login. The Change Password screen is displayed.

3. Follow the prompts to change the default password. Please refer to Raritan's KX II User Guide for details. Be sure to make a note of the new password.
4. You will receive confirmation that the password was successfully changed. Click OK. The Port Access page is displayed.
5. Select Device Settings > Network Settings.
6. Specify a meaningful Device Name for your Dominion KX II unit; up to 16 alphanumeric characters, special characters, and no spaces.
7. Select None (Static IP) from the IP auto configuration drop-down list:
8. Type the TCP/IP parameters for your Dominion KX II unit: IP address, Subnet mask, Gateway IP address, Primary DNS server IP address, and (optional) Secondary DNS server IP address.
9. Click OK to save the settings. Restart the Dominion KX II unit.

► **Connect to Network and Attach Servers**

Dominion KX II uses standard UTP cabling (Cat5/5e/6) to connect to each target server.

1. Connect a standard Ethernet cable (included) from the network port labeled LAN1 to an Ethernet switch, hub, or router.
2. To connect a target server to Dominion KX II, connect the appropriate Computer Interface Module (CIM). Please refer to Raritan's Dominion KX II User Guide for details.
3. Attach the HD15 video connector of your CIM to the video port of your target server. Ensure that your target server's video has already been configured to a supported resolution and refresh rate. For Sun servers, also ensure that your target server's video card has been set to output standard VGA (H-and-V sync) and not composite sync.
4. Attach the keyboard/mouse connector of your CIM to the corresponding ports on your target server. Using a standard straight-through UTP (Cat5/5e/6) cable, connect the CIM to an available server port on the back of your Dominion KX II unit.

---

**Dominion KX II-101**

The following section provides you with the necessary background information and steps to install and configure Raritan Dominion KX II-101 units to conform to CC-SG's requirements.

---

*Note: Be sure to document the device name, IP address, administrative username and password, and attached systems (port number, type, system name) in **Installation Template** (on page 53).*

---

**Connecting the Dominion KX II-101**

The Dominion KX II-101 has the physical connections described in the diagram below:

- 1 Attached Monitor and PS/2 Cable (See item 3.).
- 2 Mini-USB Port. Use to connect the device to the target server with the included USB cable if not using the attached PS/2 cable. A USB connection must be used in order to utilize the Absolute Mouse Sync or Virtual Media features.
- 3 Attached Monitor and PS/2 Cable. Use to connect the device to a monitor and to a target server if not using the USB cable.
- 4 LOCAL USER port. Use to connect a local keyboard, video, and mouse directly to the target server using an optional PS/2 cable.
- 5 Ethernet LAN/PoE Port. Provides LAN connectivity and power if using a PoE LAN connection.
- 6 Power Connector. Connects the power supply if you are not using a PoE (power over Ethernet) LAN connection.
- 7 Backlit LED power ON and boot-up indicator. Provides feedback on the operating status of the device.
- 8 Admin Port. Use to do one of the following:
  - Configure and manage the device with a terminal emulation program on your PC.
  - Configure and manage a power strip.
  - Connect an external modem to dial into the device.

### Connecting to the Target Server

The Dominion KX II-101 can use either the integrated PS/2 cables or the included USB cable to connect to the target server. Before connecting, configure your target server's video to a supported resolution and refresh rate as described in Setting Server Video Resolution in Raritan's **Dominion KX II-101 User Guide**.

### PS/2 Configuration

#### ► To configure the Dominion KX II-101 for use with a PS/2 target server:

1. Use the attached PS/2 keyboard, video, and mouse cabling to connect the Dominion KX II-101 to the target server.
2. Use the optional PS/2 cabling to attach the local keyboard, video, and mouse to the Local User port of the Dominion KX II-101.

---

*Note: The Dominion KX II-101 must be powered for the Local User port to function.*

---

3. If you require Virtual Media (VM) connectivity, connect the mini-USB connector to the Dominion KX II-101 and the USB connector to any USB port on the target server.

- 1 Integrated PS/2 keyboard, video, and mouse connections from Dominion KX II-101 to target server.
- 2 Dominion KX II-101.
- 3 Video connection to local monitor (optional cable).
- 4 Local monitor.
- 5 PS/2 connection from Dominion KX II-101 to mouse (optional cable).
- 6 PS/2 connection from Dominion KX II-101 to keyboard (optional cable).
- 7 Target server.
- 8 Included mini-USB to USB connector from Dominion KX II-101 to target server for Virtual Media connectivity.

**USB Configuration**

► **To configure the Dominion KX II-101 for use with a USB target server:**

- 1. Connect the mini-USB connector to the Dominion KX II-101 and the USB connector to a USB port on the target server.
- 2. Use the included PS/2 DKX2-101-LPKVMC cabling to attach only the local video to the Local User port of the Dominion KX II-101.

---

*Note: The Dominion KX II-101 must be powered for the Local User port to function.*

---

- 3. Use USB cables to connect the keyboard and mouse directly to the target server.

- 1 Included mini-USB to USB cable from Dominion KX II-101 to target server.
- 2 Dominion KX II-101.

- 3 Video connection to local monitor (optional cable).
- 4 Local monitor.
- 5 USB connection from target server to mouse.
- 6 USB connection from target server to keyboard.
- 7 Target server.

### Connecting to the Network

Connect a standard Ethernet cable from the network port labeled LAN to an Ethernet switch, hub, or router. The LAN LEDs that appear above the Ethernet connection indicate Ethernet activity. The yellow one blinks while the Dominion KX II-101 is in use, indicating IP traffic at 10Mbps. The green light indicates a 100Mbps connection speed.

### Powering the Dominion KX II-101

The Dominion KX II-101 can be powered with either the included standard AC power pack or by PoE (Power over Ethernet).

- For standard AC power, plug the included AC power adaptor kit into the Power Port and plug the other end into a nearby AC power outlet.
- For PoE, attach a 10/100Mbps cable to the LAN port, and plug the other end into a PoE-provisioned LAN.

After Dominion KX II-101 is powered ON, it goes through a boot-up sequence, during which the blue Raritan-logo LED will blink for about 45 seconds. Upon successful boot-up, the back-lit LED remains lit.

### Using the Admin Port

The Admin port enables you to perform configuration and setup for the Dominion KX II-101 using a terminal emulation program like HyperTerminal. Plug the min-DIN end of the included serial cable into the Admin port of the Dominion KX II-101 and plug the DB9 end into a serial port on your PC or laptop. The serial port communication settings should be configured to: to 115,200 Baud, 8 data bits, 1 stop bit, no parity, and no flow control.

For information about configuring the Dominion KX II-101 using the ADMIN port, see Using a Terminal Emulation Program in Raritan's **Dominion KX II-101 User Guide**.

### Configuring the Dominion KX II-101

The Dominion KX II-101 can be configured in two ways:

- Using the web-based Dominion KX II-101 Remote Console, which requires the unit to have a network connection to your workstation.
- Using a terminal emulation program like HyperTerminal, which requires a direct connection from the unit's ADMIN port to your workstation. The cable for this connection is included with the Dominion KX II-101.

This section describes both ways of configuring the Dominion KX II-101.

#### *Using the Remote Console*

The Dominion KX II-101 Remote Console is a web-based application that enables you to configure the unit prior to use. Before configuring the Dominion KX II-101 using the Remote Console, you must have both your workstation and the unit connected to a network.

To configure the Dominion KX II-101, you:

- Set a new password to replace the default
- Assign an IP address

#### **Setting a New Password**

When you first log into the Remote Console, you are prompted to set a new password to replace the default. Then you can configure the Dominion KX II-101.

1. Log on to a workstation with network connectivity to your Dominion KX II-101 unit.
2. Launch a supported Web browser such as Internet Explorer (IE) or Firefox.
3. In the address field of the browser, enter the default IP address of the unit:

192.168.0.192

4. Press Enter. The login page opens.
5. Enter the user name `admin` and the password `raritan`.
6. Click Login.

The Change Password page is displayed.

7. Type `raritan` in the Old Password field.
8. Type a new password in the New Password field; retype the new password in the Confirm New Password field. Passwords can be up to 64 characters long and can consist of English alphanumeric and printable special characters.
9. Click Apply.

You will receive confirmation that the password was successfully changed.

10. Click OK. The Port Access page opens.

### Assigning an IP Address

1. In the Dominion KX II-101 Remote Console, choose Device Settings > Network Settings. The Network Basic Settings page opens.

Home > Device Settings > Network Settings

#### Network Basic Settings

Device Name <sup>\*</sup>  
DominionKX2-101

IP auto configuration  
DHCP

Preferred host name (DHCP only)

IP address  
192.168.50.241

Subnet mask  
255.255.255.0

Gateway IP address  
192.168.50.126

Primary DNS server IP address  
192.168.50.114

Secondary DNS server IP address  
192.168.50.112

OK Reset To Defaults Cancel

- In the Device Name field, specify a meaningful name for your Dominion KX II-101 unit; up to 16 alphanumeric and special characters, no spaces.
- Select the IP configuration from the IP auto configuration drop-down list:
  - None (Static IP). This is the default and recommended option because the Dominion Dominion KX II-101 is an infrastructure device and its IP Address should not change. This option requires that you manually specify the network parameters.
  - DHCP. With this option, network parameters are assigned by the DHCP server each time the Dominion KX II-101 is booted.

### **Using a Terminal Emulation Program**

You can use the Admin serial console with a terminal emulation program like HyperTerminal to set the following configuration parameters for the Dominion KX II-101:

- IP address
- Subnet mask address
- Gateway address
- IP access control
- LAN speed
- LAN interface mode

To use a terminal emulation program with the Dominion KX II-101, you must first connect the included RS-232 serial cable from the Admin port on the Dominion KX II-101 to the COM1 port on your PC. See **Using the Admin Port** (on page 24).

For demonstration purposes, the terminal emulation program described in this section is HyperTerminal. You can use any terminal emulation program.

#### ► **To use a terminal emulation program to configure the Dominion KX II-101:**

1. Connect the Dominion KX II-101 to a local PC using the included RS-232 serial cable.

Connect to the Admin port on the Dominion KX II-101 and the COM1 port on the PC.

2. Launch the terminal emulation program you want to use to configure the Dominion KX II-101.
3. Set the following port settings in the terminal emulation program:
  - Bits per second: 115200
  - Data bits: 8
  - Parity: None
  - Stop bits: 1

- Flow control: None

4. Connect to the Dominion KX II-101. The login screen appears.
5. Type the administrator user name and press Enter. You are prompted to enter your password.
6. Type your password and press Enter. The Admin Port prompt appears.

7. At the Admin Port > prompt, type `config` and press Enter.
8. At the Config > prompt, type `network` and press Enter.
9. To view the current interface settings, at the Interface > prompt, type `interface` and press Enter.
10. To configure new network settings, at the Network prompt, type `interface` followed by one of the following commands and its appropriate argument (option), then press Enter.

Command	Argument	Options
<code>ipauto</code>	<code>none dhcp</code>	<p><code>none</code> - Enables you to manually specify an IP address for the device. You must follow this option with the <code>ip</code> command and the IP address, as shown in the following example:</p> <pre>interface ipauto none ip 192.168.50.12</pre> <p><code>dhcp</code> - Automatically assign an IP address to the device on startup.</p>
<code>ip</code>	IP address	The IP address to assign to the device. To manually set an IP address for the first time, this command must be used with the <code>ipauto</code> command and the <code>none</code> option. See <code>ipauto</code> for information. After you have manually assigned an IP address once, you can use the <code>ip</code> command alone to change the IP address.
<code>mask</code>	<code>subnetmask</code>	The subnet mask IP address.
<code>gw</code>	IP address	The gateway IP address
<code>mode</code>	<code>mode</code>	<p>The Ethernet mode. You have the following choices:</p> <ul style="list-style-type: none"> <li>▪ <code>auto</code> - Automatically sets speed and interface mode based on the network.</li> <li>▪ <code>10hdx</code> - 10 Mbs, half duplex.</li> <li>▪ <code>10fdx</code> - 10 Mbs, full duplex</li> <li>▪ <code>100hdx</code> - 100 Mbs, half duplex</li> <li>▪ <code>100fdx</code> - 100 Mbs, full duplex</li> </ul>

When you have successfully changed a setting, you see a confirmation message like the following:

```
Admin Port > config
Admin Port > Config > network
Admin Port > Config > Network > interface ipauto none ip 192.168.50.126
Network interface configuration successful.
```

1. When you are finished configuring the Dominion KX II-101, type `logout` at the command prompt and press Enter.

You are logged out of the command line interface.

---

## Dominion SX Devices

The following section provides you with the necessary background information and steps to install and configure Raritan Dominion SX units to conform to CC-SG's requirements.

---

**Note:** Be sure to document the device name, IP address, administrative username and password, and attached systems (port number, type, system name) in **Installation Template** (on page 53).

---

### ► Attach Power Cord and Installation Computer

1. Obtain a computer with a network card and a crossover network cable. This computer will be referred to as the installation computer.
2. Connect the crossover network cable to the primary LAN connection on the rear panel of the unit. On models with two Ethernet interfaces, the primary LAN is LAN 1.
3. Connect the other end of the crossover network cable to the network port on the installation computer.
4. Connect the included AC power cord to the Dominion SX unit and plug into an AC Power Outlet.
5. Power ON the Dominion SX unit.

---

**Note:** The SX unit performs a hardware self-test, indicated by the green light on the back of the unit, and then starts the software boot sequence. The boot sequence is complete when the green light goes on and remains illuminated.

---

### ► Set Dominion SX IP Address

1. Access the SX unit through your installation computer's browser on the same subnet by typing the default URL <https://192.168.0.192> into the address field.
2. Log in with the default username (admin) and password (raritan).
3. Follow the prompts to change the default password. Be sure to make a note of the new password.
4. Click the Setup tab to display the Configuration and Logging topics.
5. Click the Network section of the Setup Configuration screen.
6. Type the data in the following fields: IP Address: Network address for this unit; Subnet Mask: Subnet mask for the network where this unit will reside; Gateway IP Gateway: Default gateway for this unit.
7. Accept all other default values or change as needed.
8. Click OK to save the settings. The SX unit reboots automatically once it has been configured.

► **Connect to Network and Attach Serial Devices**

1. Power OFF the SX unit.
2. Disconnect from the installation computer, and move the Dominion SX to the location where it will be added to CC-SG.
3. Connect one end of a straight-through Cat5 cable to the SX.
4. Connect the other end of the Cat5 cable to the network.
5. To attach a device with a standard DB9 or DB25 serial console port, connect one end of a standard Cat5 Ethernet cable to a serial console port on the Dominion SX.
6. Connect the other end to a Raritan Nulling Serial Adapter (p/n ASCSDB9F, ASCSDB9M, ASCSDB25F, ASCSDB25M) as appropriate.
7. Connect the adapter to the console port of the device.

### Dominion KSX Devices

The following section provides you with the necessary background information and steps to install and configure Raritan KSX units to conform to CC-SG's requirements.

*Note: Be sure to document the device name, IP address, administrative username and password, and attached systems (port number, type, system name) in **Installation Template** (on page 53).*

#### Diagram Key

1	AC Power Cord
2	Network Port, Standard Cat5 Ethernet Cable, included
3	Power Port for Raritan Power Control Unit (p/n PCR8, PCS12, PCS20), Standard Cat5 Ethernet Cable
4	Analog Telephone Line, Telephone Cable, included
5	Serial Console Ports, Standard Cat5 Ethernet Cable with Nulling Serial Adapter (p/n ASCSDBxxx)

Diagram Key	
	Serial Console Ports. Most Cisco RJ45 or Sun RJ45 Serial Ports require Rollover Cable (p/n CRLVR-15)
	KVM Console Ports, KVM Console Cable (p/n CCPTxxx)
*	<p>Connection to Local or Admin Port, depending on unit type.</p> <p>The local port and the Admin Port locations depend on the Dominion KSX model you purchased. Dominion KSX units have a label on the underside of the chassis identifying the hardware version. The models that read either: Chassis RX440-F/S-0B or -0D or Chassis RX880-F/S-0B or -0D have the Local Admin ports on the rear panel and Local Access Console ports on the front panel (behind the bezel). For those models with labels that read Chassis RX440-F/S-0F or Chassis RX880-F/S-0F; these locations are reversed: the Local Admin ports are found on the front panel (behind the bezel) and Local Access Console ports are on the rear panel. Please consult the labeling on your Dominion KSX unit to determine where the Local and Admin ports are located.</p>

▶ **Attach Power Cord and Local Console**

1. Connect the included AC power cord to the Dominion KSX unit and plug into an AC Power Outlet.
2. Attach a PS/2 keyboard and multi-sync monitor to the corresponding local Admin Console ports on the Dominion KSX. Depending on your KSX model, the local Admin Console ports may be on the front (remove the front bezel by pulling it towards you) or the rear panel of your KSX unit. The local Admin Console is used during initial setup, but may be removed after setup is complete.
3. Power ON the Dominion KSX.

▶ **Set Dominion KSX IP Address**

1. After booting, the Dominion KSX displays the Setup Wizard on the Admin Console screen. Press B on the Admin Console keyboard to begin the initial configuration.
2. On the Network Configuration Screen, assign a unique name (for example, "Atlanta Office") and IP Address parameters for this Dominion KSX unit. Please refer to Raritan's Dominion KSX User Guide for additional information on administrative parameters.
3. Press CTRL+S to save the settings. The Main Menu appears.
4. Press R to restart.
5. Press ENTER.
6. Press R again to reboot the Dominion KSX.

► **Connect to Network and Attach Serial Devices**

1. [Optional] Disconnect the PS/2 keyboard and multi-sync monitor from the Admin Console ports. Or leave them attached for future monitoring or configuration.
2. Connect a standard Ethernet cable (included) from the network port labeled LAN1 to an Ethernet switch, hub, or router.
3. To attach a device with a standard DB9 or DB25 serial console port to Dominion KSX, connect one end of a standard Cat5 Ethernet cable to a serial console port on the Dominion SX.
4. Connect the other end of the Cat5 Ethernet cable to a Raritan Nulling Serial Adapter (p/n ASCSDB9F, ASCSDB9M, ASCSDB25F, ASCSDB25M) as appropriate.

---

**Dominion KSX II Devices**

The following section provides you with the necessary background information and steps to install and configure Raritan Dominion KSX II units to conform to CC-SG's requirements.

*Note: Be sure to document the device name, IP address, administrative username and password, and attached systems (port number, type, system name) in **Installation Template** (on page 53).*

---

Connect the Dominion KSX II to the power supply, network, local PC, KVM target servers, and serial targets. The numbers in the diagram correspond to the sections describing the connection.

## 1. AC Power

### ▶ To connect the power supply:

1. Attach the included AC power cord to the Dominion KSX II and plug into an AC power outlet.

## 2. Network Ports

Dominion KSX II provides two Ethernet ports for failover purposes (not for load-balancing). By default, only LAN1 is active and the automatic failover is disabled. When enabled, if the Dominion KSX II internal network interface or the network switch to which it is connected becomes unavailable, LAN2 will be enabled using the same IP address.

### ▶ To connect the network:

1. Connect a standard Ethernet cable (included) from the network port labeled LAN1 to an Ethernet switch, hub, or router.
2. To make use of the optional Dominion KSX II Ethernet failover capabilities:
  - Connect a standard Ethernet cable from the network port labeled LAN2 to an Ethernet switch, hub, or router.
  - Enable Automatic Failover on the Network Configuration screen. See Network Settings, LAN Interface Settings in the Raritan **Dominion KSX II User Guide**.

---

*Use both network ports only if you want to use one as a failover port.*

---

## 3. Local User Port (local PC) and Local Admin Port

For convenient access to KVM target servers and serial devices while at the rack, use the KSX II Local Access port. While the local port is required for installation and setup, it is optional for subsequent use. The local port provides the Dominion KSX II Local Console graphical user interface for administration and target server access.

### ▶ To connect the Local User port:

Attach a multi-sync VGA monitor, mouse, and keyboard to the respective Local User ports (using either a PS/2 or USB keyboard and mouse).

You can use the Local Admin port to connect the Dominion KSX II directly to a workstation to manage your serial targets and configure the system with a terminal emulation program such as HyperTerminal. The Local Admin port requires the use of a standard null modem cable.

#### 4. KVM Target Server Ports

The Dominion KSX II uses standard UTP cabling (Cat5/5e/6) to connect to each target server. See Appendix A: Specifications in the Raritan **Dominion KSX II User Guide**.

► **To connect a KVM target server to the Dominion KSX II:**

1. Use the appropriate Computer Interface Module (CIM). Refer to Supported Operating Systems and CIMs in the Raritan Dominion KSX II User Guide for more information about the CIMs to use with each operating system.
2. Attach the HD15 video connector of your CIM to the video port of your KVM target server. Ensure that your target server's video has already been configured to a supported resolution and refresh rate. For Sun servers, also ensure that your target server's video card has been set to output standard VGA (H-and-V sync) and not composite sync.
3. Attach the keyboard/mouse connector of your CIM to the corresponding ports on your target server. Using a standard straight-through UTP (Cat5/5e/6) cable, connect the CIM to an available server port on the back of your Dominion KSX II unit.

---

*Note: The DCIM-USB G2 provides a small slide switch on the back of the CIM. Move the switch to P for PC-based USB target servers; move the switch to S for Sun USB target servers.*

*A new switch position takes effect only after the CIM is power-cycled. To power-cycle the CIM, remove the USB connector from the target server and plug it back in a few seconds later.*

---

#### 5. Power Strip

► **To connect the Dominion PX to the KSX II:**

1. Plug one end of a Cat5 cable into the Serial port on the front of the Dominion PX.
2. Connect the other end of the Cat5 cable to either the Power Ctrl. 1 or Power Ctrl. 2 ports on the back of the KSX II.
3. Attach an AC power cord to the target server and an available power strip outlet.
4. Connect the power strip to an AC power source.
5. Power ON the KSX II unit.

---

**Important: When using CC-SG, the power ports should be inactive before attaching power strips that were swapped between the power ports. If not, there is a possibility that the number of power**

**outlets will not be correctly detected, especially after swapping 8 and 20 outlet power strip models.**

---

## 6. Serial Target Ports

To connect a serial target to the KSX II, use a Cat5 cable with an appropriate serial adapter.

The following table lists the necessary Dominion KSX II hardware (adapters and/or cables) for connecting the Dominion KSX II to common Vendor/Model combinations.

Vendor	Device	Console Connector	Serial Connection
Checkpoint	Firewall	DB9M	ASCSD9F adapter and a CAT 5 cable
Cisco	PIX Firewall		
Cisco	Catalyst	RJ-45	CRLVR-15 rollover cable; or CRLVR-1 adapter cable and a CAT5 cable  CRLVR-1 cable for connecting a terminal port (RJ-45 Connector type) of CommandCenter Secure Gateway-48 models that have this connector to another CommandCenter Secure Gateway.
Cisco	Router	DB25F	ASCSD25M adapter and a CAT 5 cable
Hewlett Packard	UNIX Server	DB9M	ASCSD9F adapter and a CAT 5 cable
Silicon Graphics	Origin		
Sun	SPARCStation	DB25F	ASCSD25M adapter and a CAT 5 cable
Sun	Netra T1	RJ-45	CRLVR-15 cable; or CRLVR-1 adapter and a CAT5 cable
Sun	Cobalt	DB9M	ASCSD9F adapter and a CAT 5 cable
Various	Windows NT		
Raritan	RPCU	RJ-45	CSCSPCS-10 cable or CSCSPCS-1 adapter cable

Go to the following link to obtain a list of commonly used cables and adapters <http://www.raritan.com/support>  
<http://www.raritan.com/support>

### Dominion KSX II Initial Configuration

The first time you power up the Dominion KSX II unit, there is some initial configuration that you need to perform through the Dominion KSX II Local Console:

- Change the default password.
- Assign the IP Address.

#### Assign an IP Address

These procedures describe how to assign an IP Address using the Network Settings page. For complete information about all of the fields and the operation of this page, see Network Settings in the Raritan **Dominion KSX II User Guide**.

1. From the Dominion KSX II Local Console, select Device Settings > Network Settings. The Network Settings page opens.

Home > Device Settings > Network Settings

#### Network Basic Settings

Device Name \*  
PM\_KSX2

IP auto configuration  
None

Preferred host name (DHCP only)  
[ ]

IP address  
192.168.59.248

Subnet mask  
255.255.255.0

Gateway IP address  
192.168.59.126

Primary DNS server IP address  
[ ]

Secondary DNS server IP address  
[ ]

#### LAN Interface Settings

*Note: For reliable network communication, configure the Dominion KSX II and LAN Switch to the same LAN Interface Speed and Duplex. For example, configure both the Dominion KSX II and LAN Switch to Autodetect (recommended) or set both to a fixed speed/duplex such as 100Mbps/Full.*

Current LAN interface parameters:  
autonegotiation on, 100 Mbps, full duplex, link ok

LAN Interface Speed & Duplex  
Autodetect

Enable Automatic Failover

Ping Interval (seconds) \*  
30

Timeout (seconds) \*  
60

Bandwidth Limit  
No Limit

[Set System ACL](#)

2. Specify a meaningful Device Name for your Dominion KSX II unit; up to 16 alphanumeric characters, special characters, and no spaces.
3. Select the IP auto configuration from the drop-down list:
  - None (Static IP). This option requires that you manually specify the network parameters. This is the recommended option because the Dominion KSX II is an infrastructure device and its IP Address should not change.
  - DHCP. With this option, network parameters are assigned by the DHCP server.

4. If you specify an IP configuration of None, type the TCP/IP parameters for your Dominion KSX II unit: IP address, Subnet mask, Gateway IP address, Primary DNS server IP address, and (optional) Secondary DNS server IP address.
5. Click OK.

Your Dominion KSX II unit is now network accessible.

---

*Note: In some environments, the LAN Interface Speed & Duplex setting default of Autodetect (auto-negotiation) does not properly set the network parameters, resulting in network issues. In these instances, setting the Dominion KSX II LAN Interface Speed & Duplex field to 100 Mbps/Full Duplex (or whatever option is appropriate to your network) addresses the issue.*

---

---

## Preparing Dominion PX Devices for CC-SG Management

There are two ways to configure power control using powerstrips in CC-SG.

1. All supported Raritan-brand powerstrips can be connected to another Raritan device and added to CC-SG as a Powerstrip device. Raritan-brand powerstrips include Dominion PX and RPC powerstrips. Check the Compatibility Matrix for supported versions. To configure this type of managed powerstrip in CC-SG, you must know to which Raritan device the powerstrip is physically connected. See Configuring Powerstrips That Are Managed by Another Device in CC-SG.
2. Dominion PX powerstrips can be connected directly to the IP network and added to CC-SG as a PX device. If you have PX powerstrips connected directly to the IP network, they do not need to be connected to another Raritan device.

With both methods, you must add Managed Powerstrip interfaces to nodes to create power associations between the outlets and the nodes they power. See [Interfaces for Managed Powerstrip Connections](#).

► **Special Note about Dominion PX**

Regardless of which method you choose to configure a PX, you should configure all power associations using a single method, that is, as a powerstrip of the managed device or as a PX device, but not both.

In addition, you can connect the PX to a managing device and configure power associations, and also connect the same PX device to the IP network so that you can use the PX web client to view and collect power data. See the Raritan **Dominion PX User Guide**, located in the Support section of the Raritan website under Firmware and Documentation.

This section describes how to prepare a Dominion PX device for CC-SG management without being connected to another Raritan device.

See ***Remote Power Management*** (on page 59) for information on adding Dominion PX and other supported Raritan powerstrips that are connected to another Raritan device.

---

### Connecting the Dominion PX to a Computer

You must connect the Dominion PX to a computer to configure it, using a serial connection between the Dominion PX and the computer. If you plan to use this connection to log into the CLP command line interface, leave the cable connected after the configuration is complete.

The computer must have a communications program such as HyperTerminal or PuTTY. You will need the null-modem cable and connectors that were shipped with the Dominion PX.

1. Take the null-modem cable and connect the end with the RJ-45 connector to the port labeled **Serial** on the front of the Dominion PX. See the pictures for the location of this port on your Dominion PX.

Item #	Description
1	LAN Port
2	Serial Port
3	Network Port

2. Plug the other end of the null-modem cable with the DB9 connector into the serial port (COM) of the computer.

---

### Connecting the Dominion PX to Your Network

To use the Web interface to administer the Dominion PX, you must connect the Dominion PX to your local area network (LAN).

1. Take a standard Category 5e UTP cable and connect one end to the LAN port on the front of the Dominion PX. See **Connecting the Dominion PX to a Computer** (on page 41) for the location of this port on your size Dominion PX.
2. Connect the other end of the cable to your LAN.

---

### Configuring the Dominion PX for Network Connectivity

Once the Dominion PX is connected to your network, you must provide it with an IP address and some additional networking information.

1. Go to the computer that you connected to the Dominion PX and open a communications program such as HyperTerminal or PuTTY. Make sure its port settings are configured as follows:

- Bits per second = 9600
- Data bits = 8
- Stop bits = 1
- Parity = None
- Flow control = None

---

*Note: The “Flow control” parameter must be set to “None” to ensure that the communications program will work correctly with the Dominion PX.*

---

2. Point the communications program at the serial port connecting the Dominion PX, and open a terminal window.
3. Press the **Enter** key to display the opening configuration prompt.

```

Welcome!
At the prompt type one of the following commands:
- "clp"      : Enter Command Line Protocol
- "config"   : Perform initial IP configuration
- "unblock"  : Unblock currently blocked users
192.168.0.192 command:

```

4. Type **config** and press **Enter** to begin the configuration process. You are prompted to select an IP configuration method.

```

Welcome!
At the prompt type one of the following commands:
- "clp"      : Enter Command Line Protocol
- "config"   : Perform initial IP configuration
- "unblock"  : Unblock currently blocked users
192.168.0.192 command: config
IP autoconfiguration (none/dhcp/bootp) [none]:

```

5. You must assign the Dominion PX an IP address. There are two ways to do this:
  - **Auto configuration** - Select an autoconfiguration method such as **dhcp** or **bootp** and let the DHCP or BOOTP server provide the IP address.
  - **Static IP address** - Select **None** and assign the Dominion PX a static IP address. You will be prompted for the address, network mask, and gateway.

---

*Note: The Dominion PX's IP address is automatically displayed in the system prompt. The default IP address is 192.168.0.192. The default IP configuration method is DHCP, and the default IP address will be replaced by the address assigned by DHCP or BOOTP, or the static IP address you entered, as soon as the configuration process is complete. To use the factory default IP address, type in **none** as the IP autoconfiguration command, and accept the default value. The default IP address for static (none) configuration is 192.168.0.192.*

---

Type your selection and press Enter. You are prompted to enable IP access control.

```
Welcome!
At the prompt type one of the following commands:
- "clp"      : Enter Command Line Protocol
- "config"   : Perform initial IP configuration
- "unblock"  : Unblock currently blocked users
192.168.0.192 command: config
IP autoconfiguration (none/dhcp/bootp) [none]: dhcp
Enable IP Access Control (yes/no) [no]: _
```

6. By default, IP access control is NOT enabled. This disables the Dominion PX firewall. Leave the firewall disabled for the present; later you will enable the firewall from the Web interface and create firewall rules. See Configure the Firewall.

---

*Note: If you ever accidentally create a rule that locks you out of the Dominion PX, you can rerun the configuration program and reset this parameter to **disabled** to allow you to access the Dominion PX.*

---

7. Press Enter. You are prompted to set the LAN interface speed.

```
Welcome!
At the prompt type one of the following commands:
- "clp"      : Enter Command Line Protocol
- "config"   : Perform initial IP configuration
- "unblock"  : Unblock currently blocked users
192.168.0.192 command: config
IP autoconfiguration (none/dhcp/bootp) [none]: dhcp
Enable IP Access Control (yes/no) [no]: no
LAN interface speed (auto/10/100) [auto]:
```

8. By default, the LAN interface speed is set to Auto, which allows the system to select the optimum speed. To keep the default, press **Enter**. To set the speed to 10 or 100 Mbps, type the speed you want and press **Enter**. You are prompted to select the duplex mode for the LAN interface.

```

Welcome!
At the prompt type one of the following commands:
- "clp"      : Enter Command Line Protocol
- "config"   : Perform initial IP configuration
- "unblock"  : Unblock currently blocked users
192.168.0.192 command: config
IP autoconfiguration (none/dhcp/bootp) [none]: dhcp
Enable IP Access Control (yes/no) [no]: no
LAN interface speed (auto/10/100) [auto]: 100
LAN interface duplex mode (auto/half/full) [auto]:

```

9. By default, the LAN interface duplex mode is set to **Auto**, which allows the system to pick the optimum mode. Half duplex allows data to be transmitted to and from the Dominion PX, but not at the same time. Full duplex allows data to be transmitted in both directions at the same time.

To keep the default, press **Enter**. To specify half or full duplex, type **half** or **full** and press **Enter**. You are prompted to confirm the information you just entered.

```

Welcome!
At the prompt type one of the following commands:
- "clp"      : Enter Command Line Protocol
- "config"   : Perform initial IP configuration
- "unblock"  : Unblock currently blocked users
192.168.0.192 command: config
IP autoconfiguration (none/dhcp/bootp) [none]: dhcp
Enable IP Access Control (yes/no) [no]: no
LAN interface speed (auto/10/100) [auto]: 100
LAN interface duplex mode (auto/half/full) [auto]:
Are the entered values correct? Enter y for Yes, n for No or c to Cancel _

```

10. All the configuration parameters have now been entered. All the prompts are still displayed, so you can check the information you entered. Do one of the following:
  - If the information is correct, type **y** and press **Enter**. The system completes the configuration and displays a message when the configuration is done.
  - If one or more parameters are not correct, type **n** and press **Enter**. You are returned to the IP configuration prompt as shown in the screenshot of Step 4, and given the opportunity to correct each piece of information. When the information is correct, type **y** and press **Enter** to complete the configuration and return to the opening prompt.

- If you want to terminate the configuration process, type **c** and press **Enter**. The configuration is cancelled and you are returned to the opening prompt.
11. If you entered **y** to confirm the configuration, a message appears when the configuration is complete. You will be returned to the opening prompt. You are now ready to begin using your Dominion PX.

```
Welcome!
At the prompt type one of the following commands:
- "clp" : Enter Command Line Protocol
- "config" : Perform initial IP configuration
- "unblock" : Unblock currently blocked users
192.168.0.192 command: config
IP autoconfiguration (none/dhcp/bootp) [none]: dhcp
Enable IP Access Control (yes/no) [no]: no
LAN interface speed (auto/10/100) [auto]: 100
LAN interface duplex mode (auto/half/full) [auto]:
Are the entered values correct? Enter y for Yes, n for No or c to Cancel y

Configuring device ...
Done.
```

---

*Note: The IP address configured takes about 15 seconds to take effect for the device connected via serial line, or even longer if configured over DHCP.*

---

---

## Preparing IP-Reach Devices for CC-SG Management

The following section provides you with the necessary background information and steps to install and configure Raritan IP-Reach units to conform to CC-SG's requirements.

---

*Note: Be sure to document the device name, IP address, administrative username and password, and attached systems (port number, type, system name) in **Installation Template** (on page 53).*

*Please refer to Raritan's IP-Reach Quick Setup Guide for additional information.*

---

---

### IP Reach TR or M Series

► **Attach Power Cord and Local Console**

1. Connect the included AC power cord to the IP-Reach unit.
2. Attach a PS/2 keyboard and multi-sync monitor to the corresponding ports in the back of the IP-Reach marked Admin Console.

3. Power ON the IP-Reach.

► Set IP Reach IP Address:

1. After the system boots, IP-Reach displays the Setup Wizard on the Admin Console screen.

---

*Note: During initial configuration, the IP-Reach Setup Wizard helps you quickly set up IP-Reach for the first time. The IP-Reach Setup Wizard appears only when accessing the Administrative Menus on a non-configured IP-Reach.*

---

Welcome to IP-Reach

IP-Reach has not been configured. Minimal configuration requirements to make IP-Reach operational include entry of named-user software key codes and assignment of an IP address or enabling the modem interface.

Following the IP-Reach Setup Wizard is the simplest way to perform the configuration requirements needed to start working with IP-Reach. Additional configuration options may be set at a later time through the main menu - See Local Administrative Functions in your IP-Reach User Manual.

Press B to begin the IPReach Setup Wizard.

Press X to bypass the Setup Wizard and proceed to the Main Menu.

- Press B on the Admin Console keyboard to begin configuring IP-Reach.

```

IP-Reach v3.20.59      Name [IPR-Joel      ]      IP Address [192.168. 51.150]

- Network Configuration -

Name                  [IPR-Joel      ]

Enable Ethernet Interface [YES]
  Line Speed & Duplex    [Auto Detect   ]
  Obtain IP address automatically (DHCP) [NO ]
  IP Address             [192.168. 51.150]
  Subnet Mask            [255.255.255. 0 ]
  Default Gateway        [ 0 . 0 . 0 . 0 ]

Enable Modem Interface [NO ]
Enable Web Browser Interface [YES]
Use Default TCP Port 5000 [YES]

Enable IP Failover     [NO ]

CTRL+S - Save Changes   ESC - Cancel Changes   TAB - Next Field

```

- Based on your configuration, type the requested information.

---

*Note: Do not obtain the IP-Address via DHCP. Obtain the IP-Address, the subnet mask, and default gateway from your network system administrator.*

---

- Press CTRL+S to save the settings.
- On the Network Configuration Screen, assign a unique name (e.g. Server\_Room) and IP Address parameters for IP-Reach.
- The Main Menu appears. Browse through the Admin Console options to configure IP-Reach as appropriate to your environment. Please refer to Raritan's IP-Reach User Guide for additional information.

► **Connect to Network and Attach Servers or Switches:**

- Connect a standard Ethernet cable from the network port to an Ethernet switch, hub, or router.
- Connect the included CCP20 cable(s) from the KVM In port on the IP Reach unit to the KVM console of server or KVM switch to be accessed remotely.

# Chapter 4 Install CC-SG

Basic installation of CC-SG comprises 3 steps:

1. Rack-mount the CC-SG unit.
2. Physically connect all cables. Each CC-SG model has a different setup. Follow the instructions for your CC-SG model number.
3. Set the CC-SG IP address.

Next Steps: When you have completed the installation, please refer to Raritan's CC-SG Administrators Guide for additional information on configuring your CC-SG. Use Guided Setup to easily set up your CC-SG environment.

### In This Chapter

1. Rack Mount the CC-SG Unit .....	50
2. Physical Connections .....	50
3. Set IP Address of CC-SG .....	52

---

## 1. Rack Mount the CC-SG Unit

Follow the instructions on the Quick Setup Guide that came with your CC-SG unit.

---

## 2. Physical Connections

### ► Physical Connections for CC-SG E1 Units

Numbers on the diagram below correspond to the step numbers in this procedure.

1. Connect the CAT 5 network LAN cable to the LAN 1 port on the rear panel of the CC-SG unit. Connect the other end of the cable to the network.

2. Attach the 2 included AC power cords to the power ports on the rear panel of the CC-SG unit. Plug the other ends of the AC power cords into independent UPS protected outlets.
3. Connect a video monitor and keyboard using KVM cables to the corresponding ports on the rear panel of the CC-SG unit.

#### ► Physical Connections for CC-SG V1 Units

Numbers on the diagram below correspond to the step numbers in this procedure.

1. Connect the network LAN cable to the LAN 1 port on the rear panel of the CC-SG unit. Connect other end of cable to the network.
2. Attach the included AC power cord to the port on rear panel of the CC-SG unit. Plug the other end of the cord into an AC power outlet.
3. Power ON CC-SG by popping off front bezel and pressing the POWER button.
4. Connect a video monitor and keyboard using KVM cables to the corresponding ports on the rear panel of the CC-SG unit.

---

**Note:** The CC-SG V1 hardware ships with Gigabit Ethernet NIC adaptors. As long as the NIC interfaces are using the default **auto-negotiation** setting, practically any cable can successfully be used between the interfaces and an Ethernet port. Depending on the cable, full 1000Mbps connectivity may not be possible, but minimally you should get 100Mbps.

---

► **Physical Connections for CC-SG G1 Units**

Numbers on the diagram correspond to the step numbers in this procedure.

1. Connect the network LAN cable to the LAN 0 port on the rear panel of the CC-SG unit. Connect the other end of cable to the network.
2. Attach an included AC power cord to the power port 1 on the rear panel of the CC-SG unit. Plug the other end of the cord into an AC power outlet.
3. Connect a video monitor and keyboard using KVM cables to the corresponding ports on the rear panel of the CC-SG unit.

---

### 3. Set IP Address of CC-SG

1. When you see the CommandCenter login prompt on the video output, log in with the default username/password of admin/raritan. Usernames and passwords are case-sensitive. You will be prompted to change the local console password. You can still use admin/raritan the first time you access CC-SG via a browser or other client.
2. Press CTRL+X.
3. On the Operation menu, click Network Interfaces and then select Network Interface Config.
4. The Administrator Console appears. In the Configuration field, select DHCP or Static.
5. If you select Static, type a static IP address.
6. [Optional] Specify DNS servers, netmask, and gateway address.
7. Select Save. Please wait a few minutes as CC-SG restarts.

# Appendix A Installation Template

You can use the installation template to assist you in documenting your network configuration.

# Appendix B Remote Power Management

In CC-SG, you can implement remote power management for nodes using supported Raritan powerstrips and Dominion series products. Check the Compatibility Matrix for supported powerstrips and devices. You can find the Compatibility Matrix on the Raritan web site under Firmware and Documentation in the CommandCenter Secure Gateway section.

This section shows examples of configuring powerstrips that are connected to other Raritan devices. See **Preparing Dominion PX Devices for CC-SG Management** (on page 39) for details on CC-SG management of Dominion PX devices connected directly to the IP network.

## In This Chapter

Device Configurations for Power Control in CC-SG.....	59
Example: Remote Power Management Using SX, KX, and Powerstrip .	60
Example: Remote Power Management for Multiple Power Connections	61

---

## Device Configurations for Power Control in CC-SG

When you connect a powerstrip to a Dominion SX, you can use CC-SG to manage power to nodes connected to the same SX or any other SX, KX, KX II or KSX device.

When you connect a powerstrip to a Dominion KX or KX II device, you can use CC-SG to manage power only to nodes that are connected to the same KX or KX II device to which the powerstrip is connected.

Some examples of acceptable configurations include:

- Connect a powerstrip to Dominion SX to power nodes connected to the same Dominion SX.
- Connect a powerstrip to Dominion SX to power nodes connected to a Dominion KX.
- Connect a powerstrip to Dominion KX to power nodes connected to the same Dominion KX.
- Connect multiple powerstrips to a Dominion KX to provide power failover to nodes with redundant power supplies connected to the same KX.
- Connect one powerstrip to a Dominion SX, connect a second powerstrip to another Dominion SX to provide power failover to nodes with redundant power supplies connected to any other device.

---

## Example: Remote Power Management Using SX, KX, and Powerstrip

The following diagram illustrates the physical connections for managing remote power control.

1. Connect the red RJ45 connector end of the CSCSPCS-10 cable to the RJ45 port on the powerstrip.
2. Connect the other end of the CSCSPCS-10 power control cable to any serial port on the Dominion SX.
3. Connect the node to a Dominion KX with standard CAT5 cable with a DCIM-PS2 attached. Please refer to Chapter 3, or the Dominion KX User Guide for details.
4. Plug the power cord of the node into an outlet port of the powerstrip.
5. Plug the power cord of the powerstrip into an AC outlet. Please refer to the powerstrip's documentation for details.

---

### CC-SG Configuration

Please refer to the CC-SG Administrators Guide for details on adding the remote power management configuration to CC-SG.

## Example: Remote Power Management for Multiple Power Connections

Many data center devices, network routers, switches, and servers are equipped with redundant power or multiple power supplies requiring several AC electrical connections. In the following scenario two separate power strips are provided for the node. A fully redundant configuration would include an additional Dominion SX with PowerStrip02 connected, thereby providing a separate and redundant control of the power strips. This example is limited to the simpler configuration of a single Dominion SX managing two powerstrips.

### CC-SG Configuration

Please refer to the CC-SG Administrators Guide for details on adding the remote power management configuration to CC-SG.

# Appendix C CC-SG and Network Configuration

This appendix contains network requirements, including addresses, protocols, and ports, of a typical CC-SG deployment. It includes information about how to configure your network for both external access and internal security and routing policy enforcement. Details are provided for the benefit of a TCP/IP network administrator. The TCP/IP administrator's role and responsibilities may extend beyond that of a CC-SG administrator. This appendix will assist the administrator in incorporating CC-SG and its components into a site's security access and routing policies.

The tables contain the protocols and ports that are needed by CC-SG and its associated components.

## In This Chapter

Required Open Ports for CC-SG Networks: Executive Summary.....62  
 CC-SG Communication Channels.....63

---

### Required Open Ports for CC-SG Networks: Executive Summary

The following ports should be opened:

Port Number	Protocol	Purpose	Details
80	TCP	HTTP Access to CC-SG	Not encrypted.
443	TCP	HTTPS (SSL) Access to CC-SG	SSL/AES128 encrypted.
8080	TCP	CC-SG to PC Client	SSL/AES128 encrypted if configured.
2400	TCP	Node Access (Proxy Mode)	SSL/AES128 encrypted if configured.
5000	TCP	Node Access (Direct Mode)	These ports need to be opened per Raritan device that will be externally accessed. The other ports in the table need to be opened only for accessing CC-SG. AES128 encrypted if configured.
80 and 443 for Control System nodes 80, 443, 902, and 903 for Virtual Host and Virtual Machine Nodes	TCP	Virtual Node Access	N/A

Port Number	Protocol	Purpose	Details
51000	TCP	SX Target Access (Direct Mode)	AES128 encrypted if configured.

► **Possible exceptions to the required open ports:**

Port 80 can be closed if all access to the CC-SG is via HTTPS addresses.

Ports 5000 and 51000 can be closed if CC-SG Proxy mode is used for any connections from the firewall(s).

---

## CC-SG Communication Channels

Each communication channel is documented. For each communication channel, the table includes:

- The symbolic IP Addresses used by the communicating parties. These addresses must be allowed over any communication path between the entities.
- The Direction in which the communication is initiated. This may be important for your particular site policies. For a given CC-SG role, the path between the corresponding communicating parties must be available and for any alternate re-route paths that might be used in the case of a network outage.
- The Port Number and Protocol used by CC-SG.
- Whether the port is Configurable, which means the Admin Client or Diagnostic Console provides a field where you can change the port number to a different value from the default listed if there are conflicts with other applications on the network or for security reasons.
- Details about the method of communication, the message that is passed via the communication channel, or its encryption.

---

### CC-SG and Raritan Devices

A main role of CC-SG is to manage and control Raritan devices, such as Dominion KX II. Typically, CC-SG communicates with these devices over a TCP/IP network (local, WAN, or VPN) and both TCP and UDP protocols are used as follows:

Communication Direction	Port Number	Protocol	Configurable?	Details
CC-SG to Local Broadcast	5000	UDP	yes	heartbeat
CC-SG to Remote LAN IP	5000	UDP	yes	heartbeat

Communication Direction	Port Number	Protocol	Configurable?	Details
CC-SG to Raritan Device	5000	TCP	yes	RDM protocol RC4/AES128 encrypted
Raritan Device to CC-SG	5001	UDP	no	heartbeat
CC-SG to Dominion PX	623	UDP	no	

### CC-SG Clustering

When the optional CC-SG clustering feature is used, the following ports must be available for the inter-connecting sub-networks. If the optional clustering feature is not used, none of these ports has to be open.

Each CC-SG in the cluster may be on a separate LAN. However, the inter-connection between the units should be very reliable and not prone to periods of congestion.

Communication Direction	Port Number	Protocol	Configurable?	Details
CC-SG to Local Broadcast	10000	UDP	no	heartbeat
CC-SG to Remote LAN IP	10000	UDP	no	heartbeat
CC-SG to CC-SG	5432	TCP	no	From HA-JDBC on Primary to Backup PostgreSQL DB server. Not encrypted.
CC-SG to CC-SG	8732	TCP	no	Primary-Backup server synch clustering control data exchange. MD5 encrypted.
CC-SG to CC-SG	3232	TCP	no	Primary-Backup SNMP synch configuration changes forwarding. Not encrypted.

---

### Access to Infrastructure Services

The CC-SG can be configured to use several industry-standard services like DHCP, DNS, and NTP. These ports and protocols are used to allow CC-SG to communicate with these optional servers.

Communication Direction	Port Number	Protocol	Configurable?	Details
DHCP server to CC-SG	68	UDP	no	IPv4 DHCP standard
CC-SG to DHCP server	67	UDP	no	IPv4 DHCP standard
NTP server to CC-SG	123	UDP	no	NTP standard
CC-SG to DNS	53	UDP	no	DNS standard

---

### PC Clients to CC-SG

PC Clients connect to the CC-SG in one of three modes:

- Admin or Access Client via a web browser. CC-SG supports SSL v2, SSL v3, and TLS v1 for browser connections. You can configure these encryption methods in your browser
- Command Line Interface (CLI) via SSH
- Diagnostic Console

Communication Direction	Port Number	Protocol	Configurable?	Details
PC Client to CC-SG	443	TCP	no	Client-server communication. SSL/AES128 encrypted if configured.
PC Client to CC-SG	80	TCP	no	Client-server communication. SSL/AES128 encrypted if configured.
PC Client to CC-SG	8080	TCP	no	Client-server communication. SSL/AES128 encrypted if configured.
PC Client to CLI SSH	22	TCP	yes	Client-server communication. SSL/AES128 encrypted if configured.
PC Client to Diagnostic Console	23	TCP	yes	Client-server communication. SSL/AES128 encrypted if configured.

### PC Clients to Nodes

Another significant role of CC-SG is to connect PC clients to various nodes. These nodes can be serial or KVM console connections to Raritan devices (called Out-of-Band connections). Another mode is to use In-Band access methods such as VNC, RDP, or SSH.

Another facet of PC client to node communication is whether:

- The PC client connects directly to the node either via a Raritan device or In-Band access. This is called Direct Mode.
- The PC client connects to the node through CC-SG, which acts as an application firewall. This is called Proxy Mode.

Communication Direction	Port Number	Protocol	Configurable?	Details
Client to CC-SG via Proxy to Node	2400 (on CC-SG)	TCP	no	Client-server communication. SSL/AES128 encrypted if configured.
Client to Raritan Device to Out-of-Band KVM Node (Direct Mode)	5000 (on Raritan Device)	TCP	yes	Client-server communication. SSL/AES128 encrypted if configured.
Client to Raritan Dominion SX Device to Out-of-Band Serial Node (Direct Mode)	51000 (on Raritan Device)	TCP	yes	Client-server communication. SSL/AES128 encrypted if configured.

### CC-SG and Client for IPMI, iLO/RILOE, DRAC, RSA

Another significant role of CC-SG is to manage third-party devices, such as iLO/RILOE, Hewlett Packard's Integrated Lights Out/Remote Insight Lights Out servers. Targets of an iLO/RILOE device are powered on/off and recycled directly. Intelligent Platform Management Interface (IPMI) servers can also be controlled by CC-SG. Dell DRAC and RSA targets can also be managed by CC-SG.

Communication Direction	Port Number	Protocol	Configurable?	Details
CC-SG to IPMI	623	TCP	no	IPMI standard
CC-SG to iLO/RILOE (uses HTTP ports)	80 or 443	TCP	no	Vendor standard

Communication Direction	Port Number	Protocol	Configurable?	Details
CC-SG to DRAC	80 or 443	TCP	no	Vendor standard
CC-SG to RSA	80 or 443	TCP	no	Vendor standard

---

### CC-SG and SNMP

Simple Network Management Protocol (SNMP) allows CC-SG to push SNMP traps (event notifications) to an existing SNMP manager on the network. CC-SG also supports SNMP GET/SET operations with third-party Enterprise Management Solutions such as HP OpenView.

Communication Direction	Port Number	Protocol	Configurable?	Details
SNMP Manager to CC-SG	161	UDP	yes	SNMP standard
CC-SG to SNMP Manager	162	UDP	yes	SNMP standard

---

### CC-SG and CC-NOC

CC-NOC is an optional appliance that can be deployed in conjunction with CC-SG. CC-NOC is a Raritan network-monitoring appliance that audits and monitors the status of servers, equipment, and Raritan devices that CC-SG manages.

Communication Direction	Port Number	Protocol	Configurable?	Details
CC-SG to CC-NOC	9443	TCP	no	NOC web services. SSL/AES128 encrypted.

---

### CC-SG Internal Ports

CC-SG uses several ports for internal functions, and its local firewall function blocks access to these ports. However, some external scanners may detect these as “blocked” or “filtered.” External access to these ports is not required and can be further blocked. The ports currently in use are:

- 1088
- 1098
- 2222
- 4444
- 4445
- 8009
- 8083
- 8093

In addition to these ports, CC-SG may use TCP and UDP ports in the 32xxx (or higher) range. External access to these ports is not required and can be blocked.

---

### CC-SG Access via NAT-enabled Firewall

If the firewall is using NAT (Network Address Translation) along with PAT (Port Address Translation), then Proxy mode should be used for all connections that use this firewall. The firewall must be configured for external connections to ports 80 (non-SSL) or 443 (SSL), 8080 and 2400 to be forwarded to CC-SG (since the PC Client will initiate sessions on these ports).

---

*Note: It is not recommended to run non-SSL traffic through a firewall.*

---

Connections using the firewall must be configured to use Proxy mode. See Connection Modes: Direct and Proxy. CC-SG will connect to the various targets on behalf of the PC Client requests. However, the CC-SG will terminate the PC Client to Target TCP/IP connection that comes through the firewall.
