FCC Information

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a commercial installation. This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential environment may cause harmful interference.

VCCI Information (Japan)

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。

Raritan is not responsible for damage to this product resulting from accident, disaster, misuse, abuse, non-Raritan modification of the product, or other events outside of Raritan's reasonable control or not arising under normal operating conditions.

Chapter 1 Introduction

Raritan Multi-Platform Client (MPC), Raritan Remote Client (RRC), and the Virtual KVM Client (VKC) are graphical user interfaces for the Raritan Dominion and IP-Reach product lines, providing remote access to target servers connected to Raritan KVM over IP devices.

By default, generation 2 Raritan devices use VKC. However, generation 2 devices will not work using RRC. Non-Windows users must use Raritan Multi-Platform Client and Windows® users connecting to a generation 1 Raritan device must use RRC.

The standalone Raritan Serial Console (RSC) is used to make direct connections to a serial target without going through the device. The user specifies the device address and the port number (target), and is then connected.

In This Chapter

Use with Raritan Products 1

Use with Raritan Products

The following table lists Raritan products and the client applications with which they work:

Product	Works with...			
	MPC	RRC	VKC	RSC
KX 1 G1	✓	✓		
KX II G2	✓		✓	
KX II-101	✓		✓	
KX 101 G1	✓	✓		
KSX G1	✓	✓		
KSX II G2	✓		✓	✓
SX				✓
IP Reach G1	✓	✓		
UST-IP G1	✓	✓		

Legend:

G1	Generation 1
G2	Generation 2

Note: There are some differences in MPC when used with the Dominion KX I, Dominion KX II, and Dominion KSX II devices; these differences are noted in the user guide.

Chapter 2 Virtual KVM Client (VKC)

In This Chapter

Help Options	23

Overview

Whenever you access a target server using the Remote Console, a Virtual KVM Client (VKC) window opens. There is one Virtual KVM Client for each target server connected. These windows can be accessed via the Windows task bar.

Virtual KVM Client windows can be minimized, maximized, and moved around your computer desktop.

Note: Refreshing your HTML browser will close the Virtual KVM Client connection, so exercise caution.

VKC Toolbar

	Single mouse cursor

Button	Description
	Full screen
	Resize video to fit screen

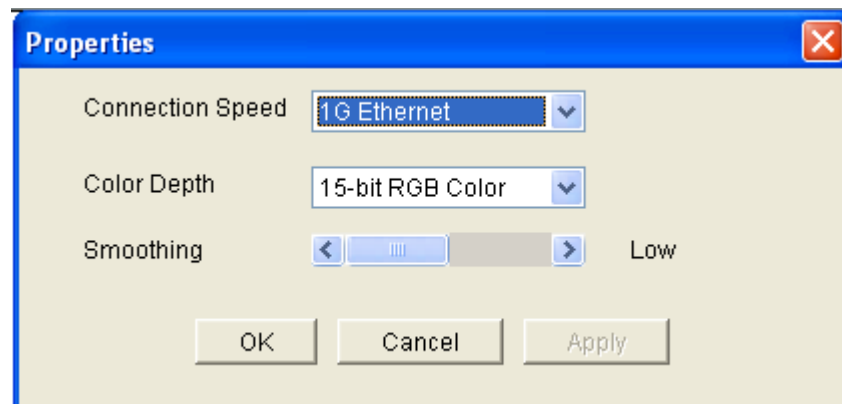

Connection Properties

The dynamic video compression algorithms maintain KVM console usability under varying bandwidth constraints. The devices optimize KVM output not only for LAN use, but also for WAN use. These devices can also control color depth and limit video output, offering an optimal balance between video quality and system responsiveness for any bandwidth.

The parameters in the Properties dialog can be optimized to suit your needs for different operating environments.

► To set the connection properties:

1. Choose Connection > Properties or click the Connection Properties button  in the toolbar. The Properties dialog appears.

Note: KX II-101 does not support 1G Ethernet.

2. Choose the Connection Speed from the drop-down list. The device can automatically detect available bandwidth and not limit bandwidth use. However, you can also adjust this usage according to bandwidth limitations.
 - Auto
 - 1G Ethernet
 - 100 Mb Ethernet

- 10 Mb Ethernet
- 1.5 Mb (MAX DSL/T1)
- 1 Mb (Fast DSL/T1)
- 512 Kb (Medium DSL/T1)
- 384 Kb (Slow DSL/T1)
- 256 Kb (Cable)
- 128 Kb (Dual ISDN)
- 56 kb (ISP Modem)
- 33 kb (Fast Modem)
- 24 kb (Slow Modem)

Note that these settings are an optimization for specific conditions rather than an exact speed. The client and server always attempt to deliver video as quickly as possible on the network regardless of the current network speed and encoding setting. But the system will be most responsive when the settings match the real world environment.

3. Choose the Color Depth from the drop-down list. The device can dynamically adapt the color depth transmitted to remote users in order to maximize usability in all bandwidths.
 - 15-bit RGB Color
 - 8-bit RGB Color
 - 4-bit Color
 - 4-bit Gray
 - 3-bit Gray
 - 2-bit Gray
 - Black and White

Important: For most administrative tasks (server monitoring, reconfiguring, and so on), the full 24-bit or 32-bit color spectrum made available by most modern video graphics cards is not necessary. Attempting to transmit such high color depths wastes network bandwidth.

4. Use the slider to select the desired level of Smoothing (15-bit color mode only). The level of smoothing determines how aggressively to blend screen regions with small color variation into a single smooth color. Smoothing improves the appearance of target video by reducing displayed video noise.
5. Click OK to set these properties.

Connection Information

► **To obtain information about your Virtual KVM Client connection:**

- Choose Connection > Connection Info. The Connection Info window opens.

The following information is displayed about the current connection:

- Device Name - The name of the device.
- IP Address - The IP address of the device.
- Port - The KVM communication TCP/IP port used to access the target device.
- Data In/Second - Data rate in.
- Data Out/Second - Data rate out.
- Connect Time - The duration of the connect time.
- FPS - The frames per second transmitted for video.
- Horizontal Resolution - The screen resolution horizontally.
- Vertical Resolution - The screen resolution vertically.
- Refresh Rate - How often the screen is refreshed.
- Protocol Version - RFB Protocol version.

► **To copy this information:**

- Click Copy to Clipboard. The information is available to be pasted into the program of your choice.

Keyboard Options

Keyboard Macros

Keyboard macros ensure that keystroke combinations intended for the target server are sent to and interpreted only by the target server. Otherwise, they might be interpreted by the computer on which the Virtual KVM Client is running (your client PC).

Macros are stored on the client PC and are PC-specific. Therefore, if you use another PC, you will not see your macros. In addition, if another person uses your PC and logs in under a different name, that user will see your macros since they are computer-wide. Keyboard macros created in the Virtual KVM Client are available in MPC and vice versa.

Building a Keyboard Macro

► To build a macro:

1. Click Keyboard > Keyboard Macros. The Keyboard Macros dialog appears.
2. Click Add. The Add Keyboard Macro dialog then appears.
3. Type a name for the macro in the Keyboard Macro Name field. This name will appear in the Keyboard menu after it is created.
4. From the Hot-Key Combination field, select a keyboard combination from the drop-down list. This allows you to execute the macro with a predefined keystroke. **Optional**
5. In the Keys to Press drop-down list:
 - a. Select each key you would like to use to emulate keystrokes. Select the keys in the order by which they are to be pressed.
 - b. After each selection, select Press Key. As each key is selected, it will appear in the Keys to Release field.

For example, select the Windows key and the letter D key. When these keys are selected in the client, the macro will be executed. Add a key release attribute to the macro if needed (see next step).
6. In the Keys to Release field:
 - a. Choose each key for which you would like to emulate a key release. Define the keys you want released in order to run the macro.

For example, specify that the keys to be pressed must also be released in order for the macro to be executed. Select the keys in the order by which they are to be released.
 - b. Click Release Key after each selection.
7. Review the Macro Sequence field to be sure the macro sequence is defined correctly.

The contents of this field are automatically generated and are based on the selections made in the Keys to Press and Keys to Release fields.
 - a. To remove a step in the sequence, select it and click Remove.
 - b. To change the order of steps in the sequence, click the step and then click the up or down arrow buttons to reorder them as needed.

8. Click OK to save the macro. Click Clear to clear all field and start over. When you click OK, the Keyboard Macros dialog appears and lists the new keyboard macro.

Add Keyboard Macro

Keyboard Macro Name:

Hot-Key Combination:

Keys to Press	Keys to Release	Macro Sequence
<div><div>All Keys</div><div>Left Ctrl Right Ctrl Left Alt Right Alt Left Shift Right Shift Scroll Lock Caps Lock</div></div>		<div>Press Left Ctrl Release Left Ctrl</div>

9. Click Close to close the Keyboard Macros dialog. The macro will now appear on the Keyboard menu in the application. Select the new macro on the menu to run it or use the keystrokes you assigned to the macro.

Running a Keyboard Macro

Once you have created a keyboard macro, execute it using the keyboard macro you assigned to it or by choosing it from the Keyboard menu.

Run a Macro from the Menu Bar

When you create a macro, it appears under the Keyboard menu. Execute the keyboard macro by clicking on it in the Keyboard menu.

Run a Macro Using a Keyboard Combination

If you assigned a keyboard combination to a macro when building it, you can execute the macro by pressing its assigned keystrokes. For example, press the keys Ctrl+Alt+0 simultaneously to minimize all windows on a Windows target server.

Modifying and Removing Keyboard Macros

► **To modify a macro:**

1. Choose Keyboard > Keyboard Macros. The Keyboard Macros dialog appears.
2. Choose the macro from among those listed.
3. Click Modify. The Add/Edit Macro dialog appears.
4. Make your changes.
5. Click OK.

► **To remove a macro:**

1. Choose Keyboard > Keyboard Macros. The Keyboard Macros dialog appears.
2. Choose the macro from among those listed.
3. Click Remove. The macro is deleted.

Ctrl+Alt+Del Macro

Due to its frequent use, a Ctrl+Alt+Delete macro, used to reboot the target computer, has been preprogrammed. Clicking on the

Ctrl+Alt+Delete button  in the toolbar sends this key sequence to the server or to the KVM switch to which you are currently connected.

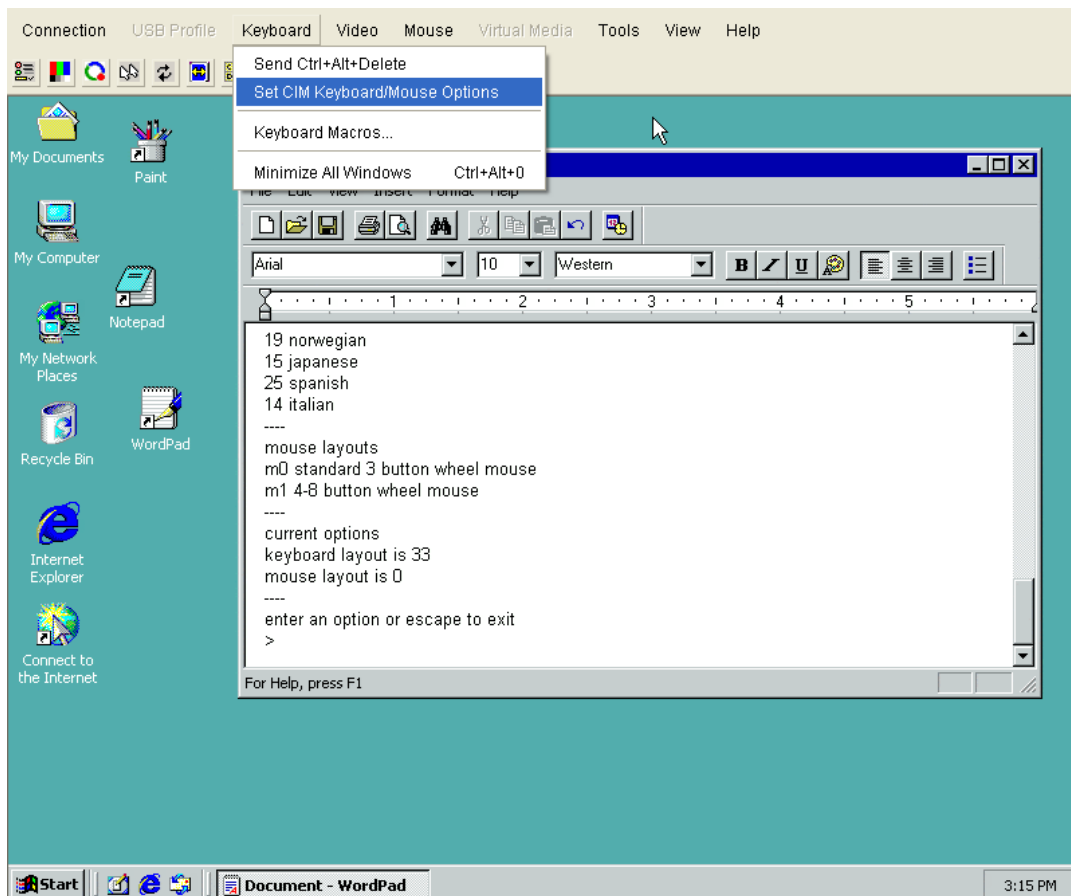

In contrast, if you were to physically press the Ctrl+Alt+Del keys, the command would first be intercepted by your own PC due to the structure of the Windows operating system, instead of sending the key sequence to the target server as intended.

Set CIM Keyboard/Mouse Options

► **To access the DCIM-USBG2 setup menu:**

1. Put the mouse focus on a window such as Note Pad (Windows) or an equivalent.
2. Press Left-Control and Num Lock simultaneously. The CIM setup menu will appear in the active window.
3. Set the language and mouse settings.

4. Exit the menu to return to normal CIM functionality.

Video Properties

Refresh Screen

The Refresh Screen command forces a refresh of the video screen. Video settings can be refreshed automatically in several ways:

- The Refresh Screen command forces a refresh of the video screen.
- The Auto-sense Video Settings command automatically detects the target server's video settings.
- The Calibrate Color command calibrates the video to enhance the colors being displayed.

In addition, you can manually adjust the settings using the Video Settings command.

► **To refresh the video settings, do one of the following:**

- Choose Video > Refresh Screen or click the Refresh Screen button  from toolbar.

Auto-Sense Video Settings

The Auto-sense Video Settings command forces a re-sensing of the video settings (resolution, refresh rate) and redraws the video screen.

► **To automatically detect the video settings, do the following:**

- Choose Video > Auto-sense Video Settings or click the Auto-Sense Video Settings button  in the toolbar. A message stating that the auto adjustment is in progress appears.

Calibrate Color

Use the Calibrate Color command to optimize the color levels (hue, brightness, saturation) of the transmitted video images. The color settings are on a target server-basis.

Note: The Calibrate Color command applies to the current connection only.

► **To calibrate the color, do the following:**

- Choose Video > Calibrate Color or click the Calibrate Color button  in the toolbar. The target device screen updates its color calibration.

Video Settings

Use the Video Settings command to manually adjust the video settings.

► To change the video settings:

1. Choose Video > Video Settings or click the Video Settings button  in the toolbar to open the Video Settings dialog.
2. Adjust the following settings as required. As you adjust the settings the effects are immediately visible:
 - a. Noise Filter

The device can filter out the electrical interference of video output from graphics cards. This feature optimizes picture quality and reduces bandwidth. Higher settings transmit variant pixels only if a large color variation exists in comparison to the neighboring pixels. However, setting the threshold too high can result in the unintentional filtering of desired screen changes. Lower settings transmit most pixel changes. Setting this threshold too low can result in higher bandwidth use.
 - b. Brightness: Use this setting to adjust the brightness of the target server display.
 - c. Brightness Red - Controls the brightness of the target server display for the red signal.
 - d. Brightness Green - Controls the brightness of the green signal.
 - e. Brightness Blue - Controls the brightness of the blue signal.
 - f. Contrast Red - Controls the red signal contrast.
 - g. Contrast Green - Controls the green signal.
 - h. Contrast Blue - Controls the blue signal.

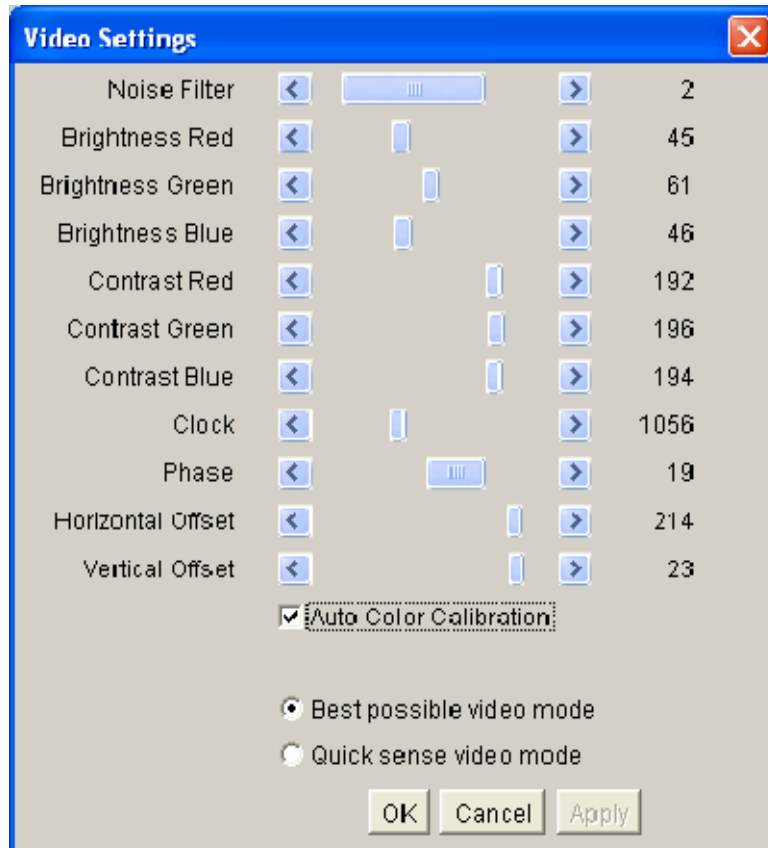

If the video image looks extremely blurry or unfocused, the settings for clock and phase can be adjusted until a better image appears on the active target server.

Warning: Exercise caution when changing the Clock and Phase settings. Doing so may result in lost or distorted video and you may not be able to return to the previous state. Contact Raritan Technical Support before making any changes.

- i. Clock - Controls how quickly video pixels are displayed across the video screen. Changes made to clock settings cause the video image to stretch or shrink horizontally. Odd number settings are recommended. Under most circumstances this setting should not be changed because the autodetect is usually quite accurate.

- j. Phase - Phase values range from 0 to 31 and will wrap around. Stop at the phase value that produces the best video image for the active target server.
 - k. Horizontal Offset - Controls the horizontal positioning of the target server display on your monitor.
 - l. Vertical Offset - Controls the vertical positioning of the target server display on your monitor.
3. Select Auto Color Calibration to enable this feature.
 4. Select the video sensing mode:
 - Best possible video mode
The device will perform the full Auto Sense process when switching targets or target resolutions. Selecting this option calibrates the video for the best image quality.
 - Quick sense video mode
With this option, the device will use a quick video Auto Sense in order to show the target's video sooner. This option is especially useful for entering a target server's BIOS configuration right after a reboot.
 5. Click OK to apply the settings and close the dialog. Click Apply to apply the settings without closing the dialog.

Note: Some Sun background screens, such as screens with very dark borders, may not center precisely on certain Sun servers. Use a different background or place a lighter colored icon in the upper left corner of the screen.

Mouse Options

When controlling a target server, the Remote Console displays two mouse cursors: one belonging to your client workstation and the other belonging to the target server.

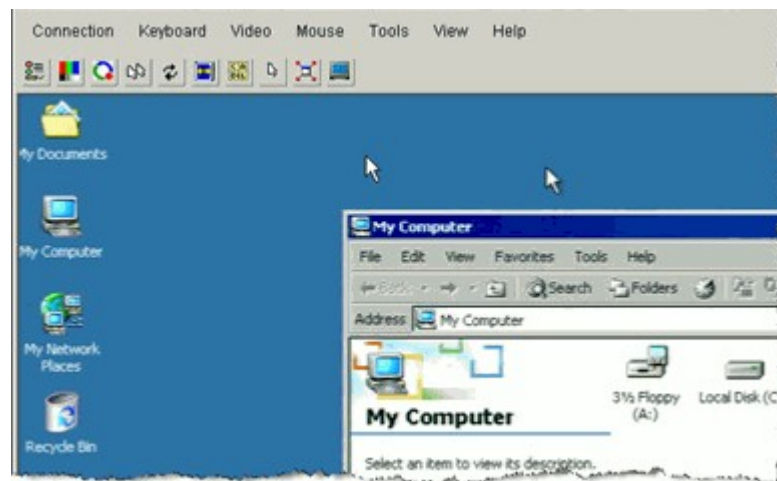

You can operate in either single mouse mode or dual mouse mode. When in dual mouse mode, and provided the option is properly configured, the mouse cursors will align.

When there are two mouse cursors, the device offers several mouse modes:

- Absolute (Mouse Synchronization)
- Intelligent (Mouse Mode)
- Standard (Mouse Mode)

Mouse Pointer Synchronization

When remotely viewing a target server that uses a mouse, you will see two mouse cursors: one belonging to your remote client workstation and the other belonging to the target server. When the mouse pointer lies within the Virtual KVM Client target server window, mouse movements and clicks are directly transmitted to the connected target server. While in motion, the client mouse pointer slightly leads the target mouse pointer due to mouse acceleration settings.

On fast LAN connections, you may want to disable the Virtual KVM Client mouse pointer and view only the target server's pointer. You can toggle between these two modes (single mouse and dual mouse).

Mouse Synchronization Tips

Be sure to follow these steps when configuring mouse synchronization:

1. Verify that the selected video resolution and refresh rate are among those supported by the device. The Virtual KVM Client Connection Info dialog displays the actual values that the is seeing.
2. Verify that the cable length is within the specified limits for the selected video resolution.
3. Verify that the mouse and video have been properly configured during the installation process.
4. Force an auto-sense by clicking the Virtual KVM Client auto-sense button.
5. If that does not improve the mouse synchronization (for Linux, UNIX, and Solaris KVM target servers):
 - a. Open a terminal window.
 - b. Enter the `xset mouse 1 1` command.
 - c. Close the terminal window.

6. Click the "Virtual KVM Client mouse synchronization" button .

Additional Notes for Intelligent Mouse Mode

- Be sure that there are no icons or applications in the upper left section of the screen since that is where the synchronization routine takes place.
- Do not use an animated mouse.
- Disable active desktop on KVM target servers.

Synchronize Mouse

In dual mouse mode, the Synchronize Mouse command forces realignment of the target server mouse pointer with Virtual KVM Client mouse pointer.

► **To synchronize the mouse, do one of the following:**

- Choose Mouse > Synchronize Mouse or click the Synchronize Mouse button  in the toolbar.

Standard Mouse Mode

Standard Mouse mode uses a standard mouse synchronization algorithm using relative mouse positions. Standard Mouse mode requires that mouse acceleration is disabled and other mouse parameters are set correctly in order for the client and server mouse to stay synchronized. Standard Mouse mode is the default.

► **To enter standard mouse mode:**

- Choose Mouse > Standard.

Intelligent Mouse Mode

In Intelligent Mouse mode, the device can detect the target mouse settings and synchronize the mouse cursors accordingly, allowing mouse acceleration on the target. In this mode, the mouse cursor does a “dance” in the top left corner of the screen and calculates the acceleration. For this mode to work properly, certain conditions must be met.

► To enter intelligent mouse mode:

- Choose Mouse > Intelligent.

Intelligent Mouse Synchronization Conditions

The Intelligent Mouse Synchronization command, available on the Mouse menu, automatically synchronizes mouse cursors during moments of inactivity. For this to work properly, however, the following conditions must be met:

- The active desktop should be disabled on the target.
- No windows should appear in the top left corner of the target page.
- There should not be an animated background in the top left corner of the target page.
- The target mouse cursor shape should be normal and not animated.
- The target mouse speeds should not be set to very slow or very high values.
- Advanced mouse properties such as “Enhanced pointer precision” or “Snap mouse to default button in dialogs” should be disabled.
- Choose “Best Possible Video Mode” in the Video Settings window.
- The edges of the target video should be clearly visible (that is, a black border should be visible between the target desktop and the remote KVM console window when you scroll to an edge of the target video image).
- When using the intelligent mouse synchronization function, having a file icon or folder icon located in the upper left corner of your desktop may cause the function not to work properly. To be sure to avoid any problems with this function, Raritan recommends you do not have file icons or folder icons in the upper left corner of your desktop.

After autosensing the target video, manually initiate mouse synchronization by clicking the Synchronize Mouse button on the toolbar. This also applies when the resolution of the target changes if the mouse cursors start to desync from each other.

If intelligent mouse synchronization fails, this mode will revert to standard mouse synchronization behavior.

Please note that mouse configurations will vary on different target operating systems. Consult your OS guidelines for further details. Also note that intelligent mouse synchronization does not work with UNIX targets.

Absolute Mouse Mode

In this mode, absolute coordinates are used to keep the client and target cursors in sync, even when the target mouse is set to a different acceleration or speed. This mode is supported on servers with USB ports.

► To enter absolute mouse mode:

- Choose Mouse > Absolute.

Note: The absolute mouse setting requires a USB target system and is the recommended mouse setting for KX II-101.

Note: Absolute Mouse Synchronization is available for use with the virtual media-enabled USB CIM (D2CIM-VUSB and D2CIM-DVUSB) only.

Single Mouse Cursor

Single Mouse mode uses only the target server mouse cursor and the local mouse pointer no longer appears onscreen. While in single mouse mode, the Synchronize Mouse command is not available (there is no need to synchronize a single mouse cursor).

► To enter single mouse mode, do the following:

1. Choose Mouse > Single Mouse Cursor.
2. Click the Single/Double Mouse Cursor button  in the toolbar.

► **To exit single mouse mode:**

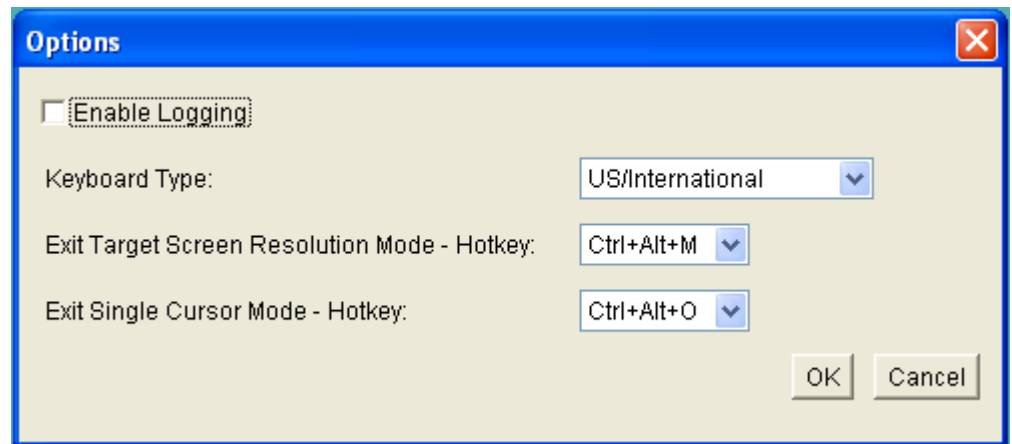

1. Press Ctrl+Alt+O on your keyboard to exit single mouse mode.

Tool Options

From the Tools menu, you can specify certain options for use with the Virtual KVM Client, including logging, setting the keyboard type, and defining hot keys for exiting target screen resolution mode and single cursor mode.

► **To set the tools options:**

1. Choose Tools > Options. The Options dialog appears.

2. Select the Enable Logging checkbox only if directed to by Technical Support. This option creates a log file in your home directory.
3. Choose the Keyboard Type from the drop-down list (if necessary). The options include:
 - US/International
 - French (France)
 - German (Germany)
 - Japanese
 - United Kingdom
 - Korean (Korea)
 - Belgian (Belgium)
 - Norwegian (Norway)
 - Danish (Denmark)
 - Swedish (Sweden)

- German (Switzerland)
 - Hungarian (Hungary)
 - Spanish (Spain)
 - Italian (Italy)
 - Slovenian
4. Exit Target Screen Resolution Mode - Hotkey. When you enter target screen resolution mode, the display of the target server becomes full screen and acquires the same resolution as the target server. This is the hot key used for exiting this mode.
 5. Exit Single Cursor Mode - Hotkey. When you enter single cursor mode, only the target server mouse cursor is visible. This is the hot key used to exit single cursor mode and bring back the client mouse cursor.
 6. Click OK.

Keyboard Limitations

Slovenian Keyboards

The < key does not work on Slovenian keyboards due to a JRE limitation.

Language Configuration on Linux

Because the Sun JRE on Linux has problems generating the correct Key Events for foreign-language keyboards configured using System Preferences, Raritan recommends that you configure foreign keyboards using the methods described in the following table.

Language	Configuration method
US Intl	Default
French	Keyboard Indicator
German	System Settings (Control Center)
Japanese	System Settings (Control Center)
UK	System Settings (Control Center)
Korean	System Settings (Control Center)
Belgian	Keyboard Indicator
Norwegian	Keyboard Indicator
Danish	Keyboard Indicator
Swedish	Keyboard Indicator
Hungarian	System Settings (Control Center)
Spanish	System Settings (Control Center)

Language	Configuration method
Italian	System Settings (Control Center)
Slovenian	System Settings (Control Center)

Note: The Keyboard Indicator should be used on Linux systems using Gnome as a desktop environment.

View Options

View Toolbar

You can use the Virtual KVM client with or without the toolbar display.

► **To toggle the display of the toolbar (on and off):**

- Choose View > View Toolbar.

Scaling

Scaling your target window allows you to view the entire contents of the target server window. This feature increases or reduces the size of the target video to fit the Virtual KVM Client window size, and maintains the aspect ratio so that you see the entire target server desktop without using the scroll bar.

► **To toggle scaling (on and off):**

- Choose View > Scaling.

Target Screen Resolution

When you enter target screen resolution mode, the display of the target server becomes full screen and acquires the same resolution as the target server. The hot key used for exiting this mode is specified in the Options dialog (the default is Ctrl+Alt+M).

► **To enter target screen resolution:**

- Choose View > Target Screen Resolution.

► **To exit target screen resolution mode:**

Press the hot key configured in the Tools Options dialog. The default is Ctrl+Alt+M.

Help Options

About Raritan Virtual KVM Client

This menu command provides version information about the Virtual KVM Client, in case you require assistance from Raritan Technical Support.

► **To obtain version information:**

- Choose Help > About Raritan Virtual KVM Client.

Chapter 3 Multi-Platform Client and Raritan Remote Client

Raritan Multi-Platform Client (MPC) and Raritan Remote Console are graphical user interfaces for the Raritan product lines, providing remote access to target servers connected to Raritan KVM over IP devices. Non-Windows users must use Raritan Multi-Platform Client and Windows® users running Internet Explorer must use Raritan Remote Client.

In This Chapter

Requirements and Installation	24
Operation	51
Administrative Functions	120

Requirements and Installation

MPC Requirements and Installation Instructions

Note to CC-SG Users

If you are using Dominion KX II in a CC-SG configuration, do not use the CC-SG proxy mode if you are also planning to use the Multi-Platform Client (MPC).

MPC Minimum System Requirements

The minimum system requirements for the Multi-Platform Client are:

- CPU Speed: 1.0 GHz
- RAM: 512 Mbytes

Note: Running the client software on system configurations below either of these specifications may impact performance and result in errors.

MPC Supported Operating Systems and Browsers

Operating Systems

When launched as a web applet or as a standalone application, MPC allows you to reach target servers via different Raritan Dominion devices and IP Reach models.

Raritan MPC is compatible with the following platforms:

- Windows XP
- Windows 2000 SP4
- Windows Vista
- Red Hat Linux® 9.0
- Red Hat Enterprise Workstation 3.0 and 4.0
- SUSE Linux Professional 9.2 and 10
- Fedora Core 5 and above
- Mac®
- Solaris™

Note: If you are using a Mac 10.5, use Java 1.4.2.x in order to avoid possible text length issues in the MPC interface. Specifically, IP addresses in the MPC Navigator and menu text may be cut off if you are not using Java 1.4.2.x with 10.5.

Browsers

MPC supports the following browsers:

- Internet Explorer 6 and 7
- Firefox® 1.5 and 2.0
- Mozilla® 1.7
- Safari 2.0

Note: If you are using IE 7, you may run into permission issues when trying to connect to a target server. To avoid this, do the following:

- 1. In IE7, click Tools > Internet Options to open the Internet Options dialog.*
 - 2. In the "Temporary Internet files" section, click the Settings button. The Settings dialog opens.*
 - 3. In the "Check for newer versions of stored pages" section, select Automatically.*
 - 4. Click OK to apply the settings.*
-

Note to IPv6 Users

Due to a browser limitation, MPC cannot be downloaded via the KX IPv6 address from Mozilla 1.7 if Pop-up Manager is enabled. Do one of the following to avoid this issue:

- Use the hostname of the device for the MPC browser download.
- Set Mozilla to not block Pop-up windows via edit\Preferences\Privacy and Security.
- Use IPV4 address.
- Use standalone MPC.
- Use the latest version of Firefox.

Special Characters in MPC

The following table identifies the special characters that can be used in MPC:

Character	Description	Character	Description
!	Exclamation point	:	Colon
"	Double quote	;	Semi-colon
#	Pound sign	=	Equal sign
\$	Dollar sign	>	Greater than sign
%	Percent sign	?	Question mark
&	Ampersand	@	At sign
'	Single quote	[Left bracket
(Left parenthesis	\	Backward slash
)	Right parenthesis]	Right bracket
*	Asterisk	^	Caret
+	Plus sign	_	Underscore
,	Comma	`	Grave accent
-	Dash	{	Left brace
.	Period		Pipe sign
/	Forward slash	}	Right brace
<	Less than sign	~	Tilde

Installing and Opening Standalone MPC

Raritan recommends that you open only one standalone MPC session at a time. Opening more than one standalone MPC session on the same client at the same time may cause performance problems and system errors.

Important: MPC modem connectivity is supported on Windows, Linux, and Sun Solaris but not Macintosh. When working in Windows, use Standalone MPC.

You must have the MPC JAR file to install MPC for any of these operating systems.

► **To check for the MPC JAR file:**

1. Download the installation file, MPC-installer.jar from the Raritan website (www.raritan.com) on the Support - Firmware Upgrades page. Click Dominion Family and scroll to the Standalone Multi-Platform Client link.
2. If copying MPC-installer.jar from a known location, double-click the file to start installation.

Windows

► **To check the JRE version in Windows:**

1. Do one of the following to check the JRE version in Windows:
 - Determine your version of the JRE from the Java website: <http://www.java.com/en/download/help/testvm.xml>.
 - Click the Windows Start button at the bottom left of your page and click Control Panel.

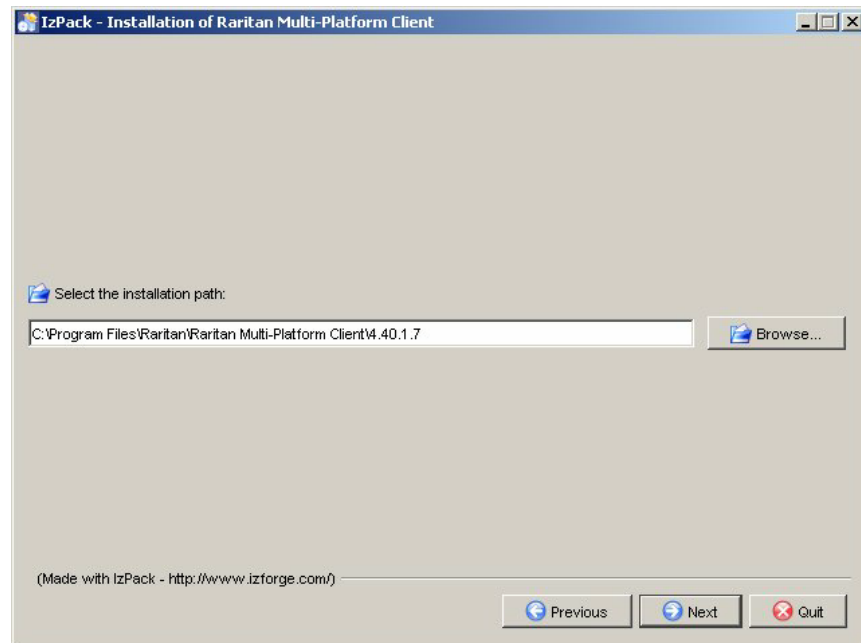

Tip: In the upper left corner of the page, you may see a panel named Control Panel with the option Switch to Classic View or Switch to Category View. For easier viewing, opt for Classic View.

- a. Search the Control Panel files for a Java icon. When you locate the Java icon, double-click it to open the Java Control panel. Click the General tab and then click the About button to check the current Java Runtime Environment (JRE).
- b. If the JRE is version 1.4.2_05 or later, proceed with the MPC Installation. If the Java icon does not exist in the Control Panel or if the JRE version is prior to 1.4.2_05, go to the Sun Microsystems website at <http://java.sun.com/products/> to download the latest version of JRE.
2. For future Java access and to automatically open it, set your path to the Java executable.

- a. Right-click the My Computer icon on your desktop and click Properties.
- b. Click the Advanced tab and then click "Environment variables".
- c. Edit the Path address so that it contains the path to the Java executable.
For example, if Java is installed on C:\j2re1.4.2_05 and your path is currently set to C:\WINDOWS\SYSTEM32, then change the path to read C:\WINDOWS\SYSTEM32;C:\j2re1.4.2_05

► **To install MPC for Windows:**

1. Download the MPC-installer.jar installation file or copy the file from a known location.
2. Double-click the jar file icon to open the installation dialog.
3. After the initial dialog appears, click Next.

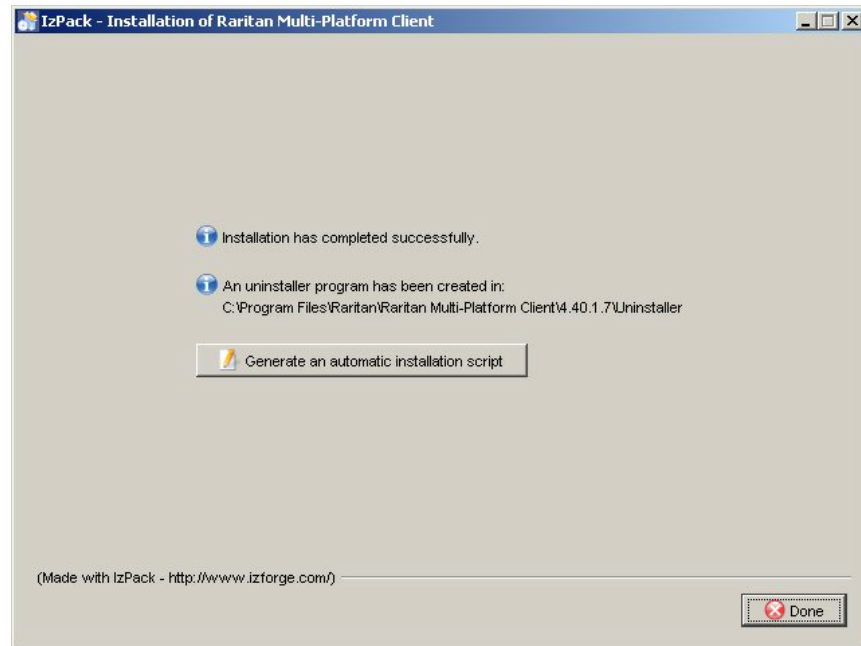

4. Choose the directory where you want to install MPC and click Next. Click Browse to locate a non-default directory.

5. Click Next.

6. In the Shortcut dialog, choose a shortcut location, determine who should have the shortcut, and determine whether you want the shortcut on the desktop. When finished, click Next.

Once the installation is complete, the final dialog indicates where you will find an uninstaller program and provides an option for generating an automatic installation script. Click Done to close the Installation dialog.

► **To open MPC in Windows:**

1. Click the Windows Start menu and then choose All Programs > Raritan Multi-Platform Client. Alternatively, double-click the MPC desktop shortcut icon if you created one.
2. Double-click the desired device in the Navigator to establish a connection.
3. Type your user name and password in the device dialog and then click OK to log on.

Linux

Raritan recommends using Java® Runtime Environment (JRE) version 1.5 for optimum performance but MPC will function with JRE version 1.4.2_05 or greater (with the exception of JRE 1.5.0_02). JRE 1.6 is also supported but has not been fully tested.

Determine your version of the JRE from the Java website:
<http://www.java.com/en/download/help/testvm.xml>.

You may need some configuration depending on your OS and browser. Configuration instructions are provided with the JRE download.

Important: When launching MPC from a browser, it is highly recommended that you disable the Java Applet caching.

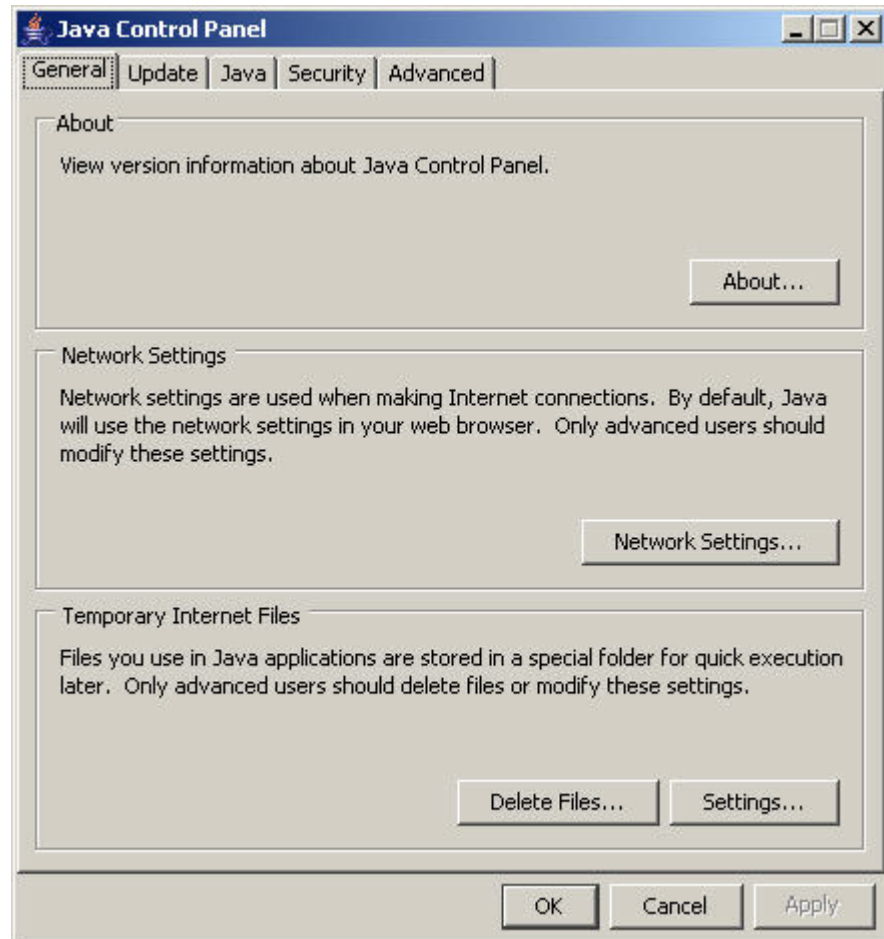

Although no actual problems have occurred when Java caching is turned on, some non-impacting Java exceptions have occurred. Generation of these Java-exceptions can appear in the Java Applet Console window and may degrade performance.

For Linux/UNIX environments, the Java Control Panel is located in the JRE's bin directory; the location varies based on where JRE was installed by your Linux/UNIX administrator.

Tip: It is also recommended that you clear the Java cache.

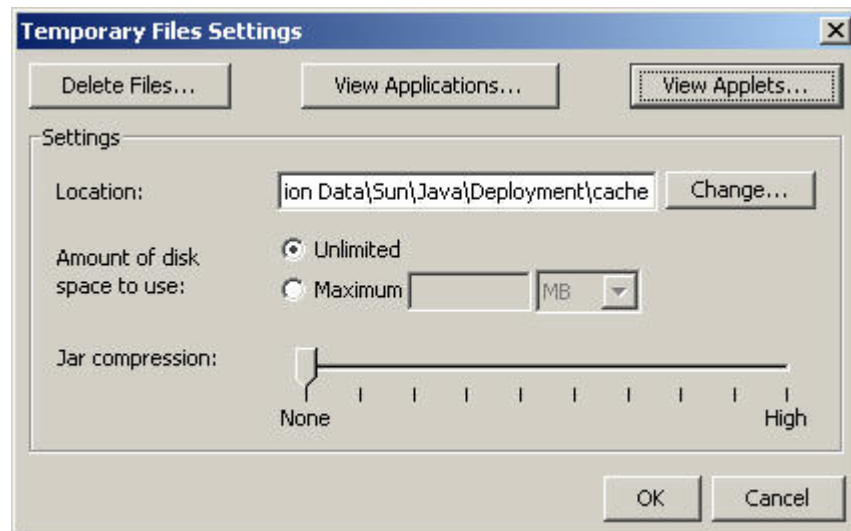

► **To disable Java caching and clear the cache (use these steps with Microsoft Windows XP and JRE 1.5.0):**

1. From the Start menu, click Control Panel.
2. Double-click on the Java icon to launch it. The Java Control Panel dialog appears.

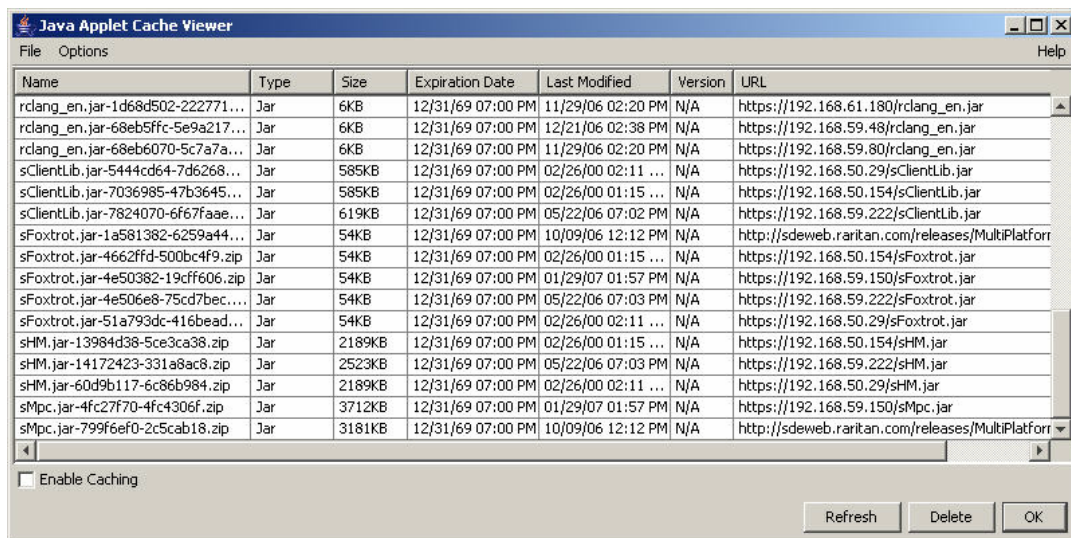

3. To disable Java caching:

- a. From the General tab, click the Settings button. The Temporary Files Settings dialog appears.

- b. Click the View Applets button. The Java Applet Cache Viewer opens.

- c. Deselect the Enable Caching checkbox if it is already checked.
 - d. Click OK.
4. To clear the Java cache:
 - a. From the Temporary Files Settings dialog, click the Delete Files button. The Delete Temporary Files dialog appears.

- b. Select the temporary files that you want to delete.

5. Click OK.

► **To check the JRE version in Linux:**

1. In a graphical environment, open a terminal dialog.
2. Type `java version` in the command line and press Enter on your keyboard. The currently-installed version of Java Runtime Environment (JRE) is displayed.

If your path variable is not set to where the java binaries have been installed, you may not be able to see the JRE version.

3. Set your path:
 - a. To set your path and assuming JRE 1.4.2_05 is installed in `/usr/local/java`: you must set your PATH variable.
 - b. To set the path for bash shell, export `PATH=$PATH:/usr/local/java/j2re1.4.2_05/bin`.
 - c. To set the path for tcsh or csh, set `PATH = ($PATH /usr/local/java/j2re1.4.2_05/bin)`.

These commands can be typed at the terminal each time you login. Alternatively, you can add it to your `.bashrc` for bash shell, `.cshrc` for csh, or `.tcshrc` so that each time you login the PATH is already set.

See your shell documentation if you encounter problems.

```
usr1@localhost:~  
File Edit View Terminal Tabs Help  
[usr1@localhost ~]$ java -version  
java version "1.4.2_06"  
Java(TM) 2 Runtime Environment, Standard Edition (build 1.4.2_06-b03)  
Java HotSpot(TM) Client VM (build 1.4.2_06-b03, mixed mode)  
[usr1@localhost ~]$
```

4. If the JRE is version 1.4.2_05 or higher, proceed with the MPC installation. If the version is prior to 1.4.2_05, go to the Java website at <http://java.sun.com/products/> to download the latest Runtime Environment.

► **To install MPC for Linux:**

You must have Administrative privileges to install MPC.

1. Download the MPC-installer.jar file or copy it from a known location.
2. Open a terminal dialog and open the directory where the installer is saved.
3. Type `java -jar MPC-installer.jar` and press Enter to run the installer.

4. After the initial page loads, click Next.

5. Use the Browse function to select a directory to install MPC if the directory is different from the default path displayed in the "Select the installation path" field.
6. Click Next to open the Shortcut dialog.
7. On the Shortcut dialog:
 - Choose a shortcut location from the "Select a Program Group for the Shortcuts:" field.
 - Select either "current user" or "all users" to define who should have access to the shortcut.
 - Check the "Create shortcut on the desktop" checkbox if you want the shortcut to appear on the desktop.

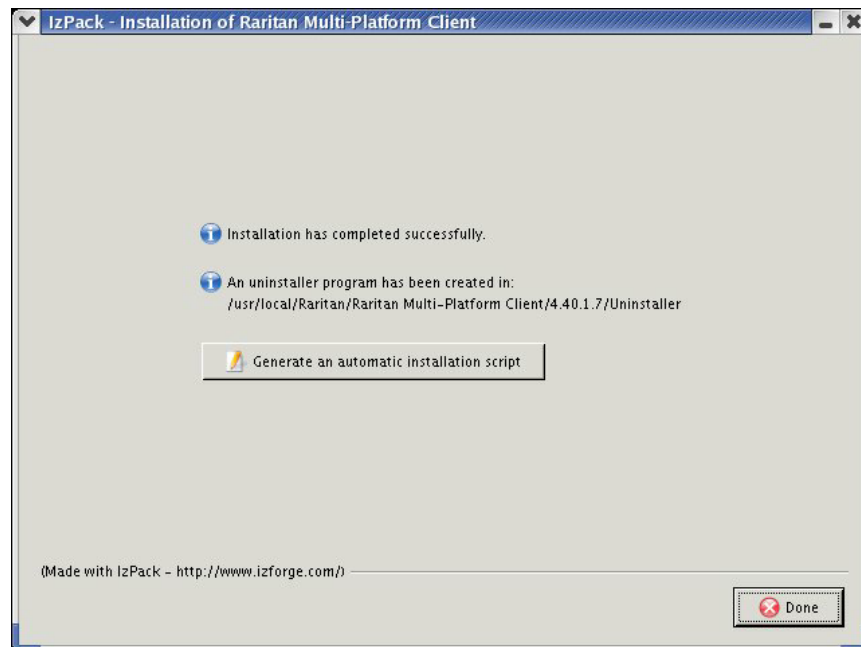

8. When finished, click Next.

Note: Once MPC is installed successfully, a shortcut will be available on the desktop. However, for Linux users, you will need to log off of and then back into your session before the shortcut will be visible on the desktop.

Once the installation is complete, the final page indicates where you will find an uninstaller program and provides you with the option to generate an automatic installation script.

9. Click Done to close the Installation dialog.

► **To open MPC in Linux:**

1. Open a terminal window and change directories to the directory where you installed MPC (default location: `/usr/local/Raritan/Raritan MPC/4.40.1.7/`).
2. Type `./start.sh` and press Enter to open MPC.
3. Double-click the desired device to establish a connection, type your user name and password, and click OK to log on.

Solaris

To check the JRE version for Sun Solaris:

1. Launch a terminal window on the Sun Solaris desktop.
2. Type `java version` in the command line and press Enter. The currently-installed version of Java Runtime Environment (JRE) appears.

If your path variable is not set to where the java binaries have been installed, you may not be able to see the JRE version.

- a. To set your path and assuming JRE 1.4.2_05 is installed in `/usr/local/java`, you must set your PATH variable.
- b. To set path for bash shell, export
`PATH=$PATH:/usr/local/java/j2re1.4.2_05/bin.`
- c. To set path for tcsh or csh, set `PATH = ($PATH /usr/local/java/j2re1.4.2_05/bin).`

3. These commands can be typed at the terminal each time you login. Alternatively, you can add it to your `.bashrc` for bash shell, `.cshrc` for csh, or `.tcshrc` for tcsh so that each time you login the `PATH` is already set. See your shell documentation if you encounter problems.

A screenshot of a terminal window titled "Terminal". The window has a menu bar with "Window", "Edit", "Options", and "Help". The terminal content shows the output of the command `java -version`. The output is: `java version "1.4.2_05"`, `Java(TM) 2 Runtime Environment, Standard Edition (build 1.4.2_05-b04)`, and `Java HotSpot(TM) Client VM (build 1.4.2_05-b04, mixed mode)`. The prompt `#` is visible at the end of the last line.

```
# java -version
java version "1.4.2_05"
Java(TM) 2 Runtime Environment, Standard Edition (build 1.4.2_05-b04)
Java HotSpot(TM) Client VM (build 1.4.2_05-b04, mixed mode)
#
```

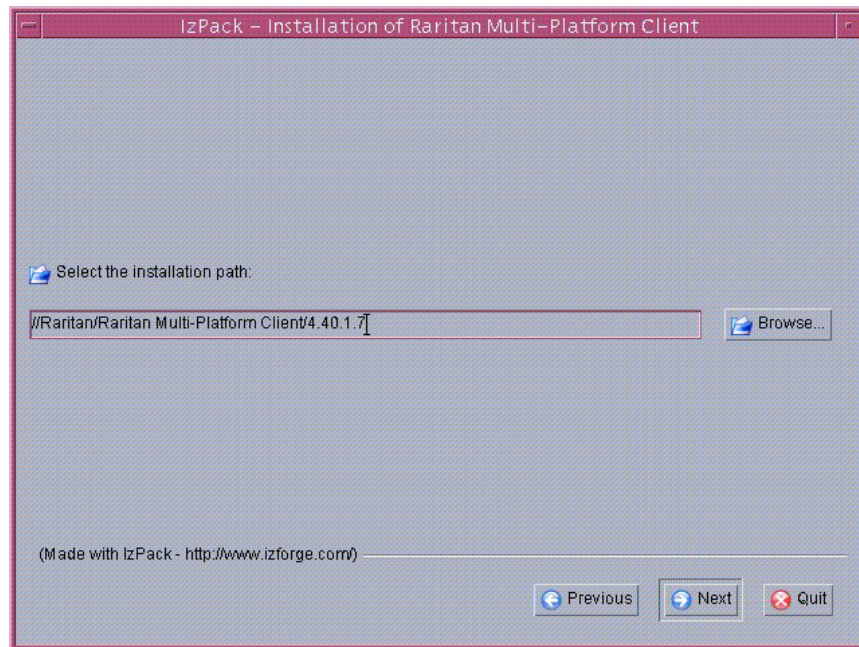

4. If the JRE is version 1.4.2_05 or higher, proceed with the MPC installation. If the version is prior to 1.4.2_05, go to the Sun website at <http://java.sun.com/products/> to download the latest Runtime Environment.

► **To install MPC for Sun Solaris:**

You must have administrative privileges to install MPC.

1. Download the `MPC-installer.jar` file or copy it from a known location.
2. Open a terminal window and navigate to the directory where the installer is saved.
3. Type `java -jar MPC-installer.jar` and press Enter to run the installer.

4. After the initial page loads, click Next.

5. Use the Browse function to navigate to the directory you want to install MPC or select the default directory displayed in the "Select the installation path" field.
6. Click Next.
7. When installation is complete, click Next.
8. Click Next again.

Once the installation is complete, the final dialog will indicate where you will find an uninstaller program and provides the option to generate an automatic installation script.

9. Click Done to close the Installation dialog.

► **To open MPC in Sun Solaris:**

1. Open a terminal window and navigate to the directory where you installed MPC (the default location is /usr/local/Raritan/Raritan MPC/4.40.1.7).
2. Type `./start.sh` and press Enter to open MPC.
3. Double-click the desired device to establish a connection, type your user name and password, and click OK to log on.

Macintosh

► **To check JRE on Macintosh:**

1. Launch a terminal window on the Macintosh desktop.

2. Type the java version in the command line and press Enter. The currently-installed version of the Java Runtime Environment (JRE) is displayed.

A screenshot of a macOS Terminal window titled "Terminal — sh — 80x24". The window shows the output of the command "java -version". The text displayed is: "Last login: Tue Mar 22 09:04:25 on ttty1", "Welcome to Darwin!", "Raritan-MIS-Computer:~ root# java -version", "java version "1.4.2_05"", "Java(TM) 2 Runtime Environment, Standard Edition (build 1.4.2_05-141.3)", "Java HotSpot(TM) Client VM (build 1.4.2-38, mixed mode)", and "Raritan-MIS-Computer:~ root#".

```
Terminal — sh — 80x24
Last login: Tue Mar 22 09:04:25 on ttty1
Welcome to Darwin!
Raritan-MIS-Computer:~ root# java -version
java version "1.4.2_05"
Java(TM) 2 Runtime Environment, Standard Edition (build 1.4.2_05-141.3)
Java HotSpot(TM) Client VM (build 1.4.2-38, mixed mode)
Raritan-MIS-Computer:~ root#
```

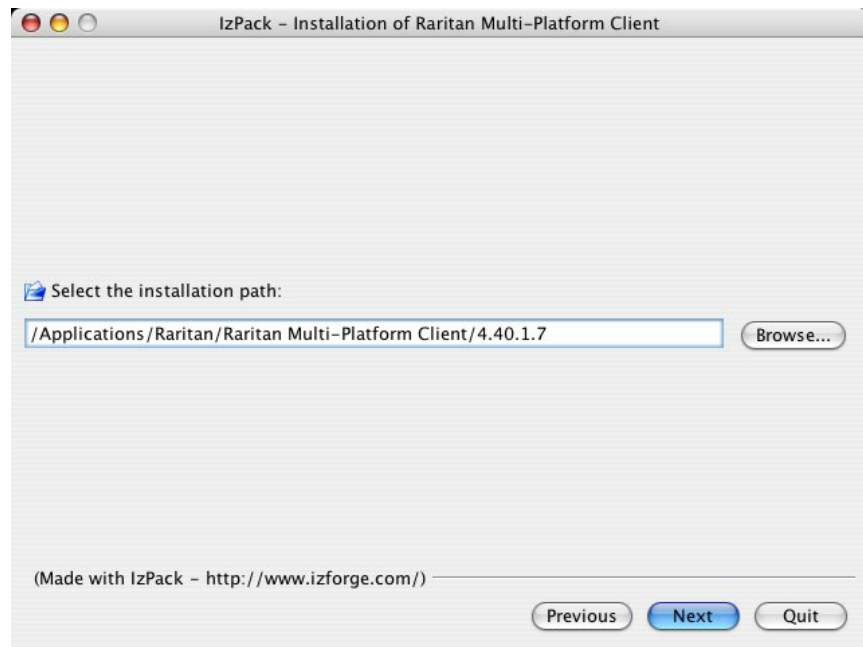

3. If the JRE is version 1.4.2_05 or higher, proceed with the MPC installation. If the version is prior to 1.4.2_05, go to the Apple website to download the latest Runtime Environment.

► **To install MPC on a Mac:**

You must have administrative privileges to install MPC.

1. Download the MPC-installer.jar file or copy it from a known location.
2. Open a Finder window and locate the installer.
3. Double click the MPC-installer.jar file to run the installer.

4. After the initial dialog appears, click Next.

5. Use the Browse function to select a directory to install MPC if the directory is different from the default path displayed in the "Select the installation path" field.
6. When installation is complete, click Next.

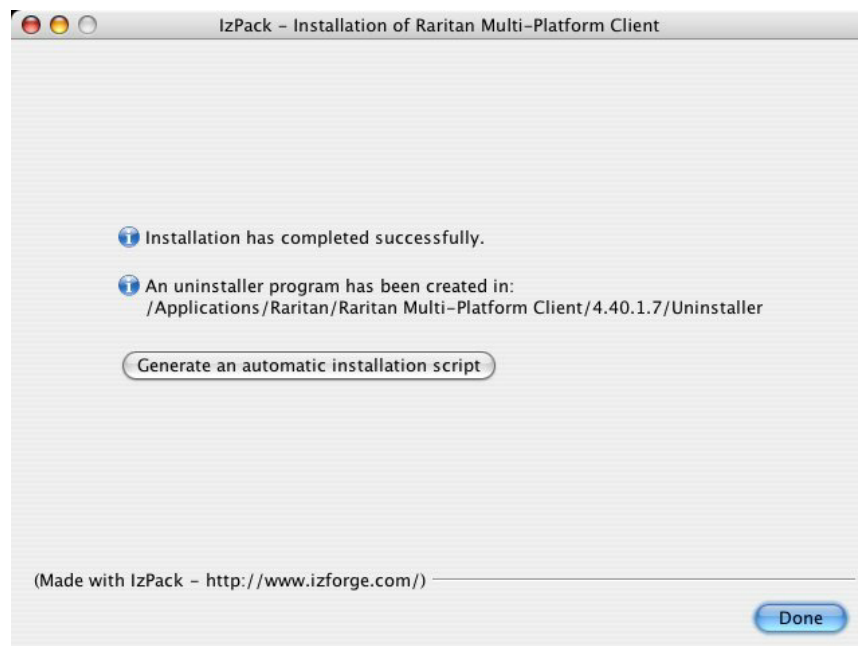

Once the installation is complete, the final dialog indicates where you will find an uninstaller program and provides you with the option to generate an automatic installation script.
7. Click Done to close the Installation dialog.

► **To open MPC on a Mac:**

1. Open a Finder window and navigate to the directory where you installed MPC (the default location is /Applications/Raritan/Raritan MPC/4.40.1.7).

2. Double-click the desired device to establish a connection, type your user name and password, and click OK to log on.

3. Open a Finder window and navigate to the directory where you installed MPC (the default location is /Applications/Raritan/Raritan MPC/4.40.1.7).

4. Double-click the desired device to establish a connection, type your user name and password, and click OK to log on.

Opening MPC from a Web Browser

Important: Regardless of the browser you use, you must allow pop-ups from the Dominion device's IP address in order to open MPC.

1. To open MPC from a client running any supported browser, type `http://IP-ADDRESS/mpc` into the address line, where IP-ADDRESS is the IP address of your Raritan device. MPC will open in a new window. See **MPC Supported Operating Systems and Browsers** (on page 25) for information on MPC supported browsers.

Note: The Alt+Tab command will toggle between windows only on the local system.

When MPC opens, the Raritan devices that were automatically detected and which are found on your subnet are displayed in the Navigator in tree format.

2. If your device is not listed by name in the navigator, add it manually:
 - a. Choose Connection > New Profile. The Add Connection window opens.

- b. In the Add Connection window, type a device Description, specify a Connection Type, add the device IP address, and click OK. These specifications can be edited later.
3. In the Navigator panel on the left of the page, double-click the icon that corresponds to your Raritan device to connect to it.

Note: Depending on your browser and browser security settings, you may see various security and certificate check and warning messages. It is necessary to accept the options in order to open MPC.

Modem Connectivity in MPC

► **To make modem connectivity available on Unix, Linux, and Mac OS for non-root users:**

1. As the root, change the group for /etc/ppp directory and required files:
 - a. `chgrp uucp /etc/ppp`
 - b. `chgrp uucp /etc/ppp/pap-secrets`
 - c. `chgrp uucp /etc/ppp/peers`
2. Change the permissions for /etc/ppp `chmod g+rx /etc/ppp`
3. Change the permissions for /etc/ppp/pap-secrets `chmod g+rx /etc/ppp/pap-secrets`
4. Change the permissions for /etc/ppp/peers `chmod g+rx /etc/ppp/peers`

5. Set the suid bit to pppd `chmod u+s /usr/sbin/pppd (/usr/bin/pppd depending on the location of pppd)`
6. Assign users to the uucp group:
 - a. `/usr/sbin/usermod -G {existing groups for user1},uucp user1`
 - b. `/usr/sbin/usermod -G {existing groups for user2},uucp user2, and so forth.`
7. When logged on as the normal user, update the path for access to pppd and the chat export `PATH=$PATH:/usr/sbin (/usr/bin depending on the location of pppd).`

Note: For both root and non-root users, ensure that the options file exists under /etc/ppp

RRC Requirements and Installation Instructions

Important: RRC works only with Microsoft Internet Explorer. If you are using a different web browser, MPC will load automatically.

Most users access RRC via Internet Explorer, while other users, particularly those operating over a modem connection, access RRC standalone. Both options are detailed in this guide.

Note: Modem use is not supported with Raritan's Dominion KX101.

RRC Minimum System Requirements

The minimum system requirements for the Raritan Remote Client are:

- CPU Speed: 1.0 GHz
- RAM: 512 Mbytes

Note: Running the client software on system configurations below either of these specifications may impact performance and result in errors.

Installing and Opening Standalone RRC

Note: This step is optional. Devices can be accessed from a remote PC either by installing RRC software or by opening RRC via a web browser. Accessing Devices via a web browser does not require any software installation on a remote PC.

This section lists the steps required to invoke RRC using standalone software, which may be useful for accessing devices via modem or if you wish to close firewall access to ports 80 and/or 443.

1. Launch your web browser and go to Raritan's website (<http://www.raritan.com/>).
2. Click Support in the top navigation bar and then click Firmware Upgrades in the left navigation panel (or type the URL <http://www.raritan.com/support/firmwareupgrades>).
3. Scroll down the page until you see the appropriate product name and click on it.
4. Locate the version of the standalone RRC client you are using. The entry for the standalone RRC client is a .zip file which contains the release notes and the installer for standalone RRC. Check the release notes for the latest information.
5. Download the .zip file or simply click on the .zip file entry.
6. Double-click on the installer executable in the .zip file and follow the instructions in the InstallShield Wizard to complete the RRC installation. Be sure to check the release notes for the latest information and any release specific instructions.

Depending upon the configuration of your PC, the RRC installation program may also automatically install DirectX and Microsoft Foundation Class libraries (if they are required). If they are installed, you will be asked to restart your PC after the installation.

7. A Raritan Remote Client icon will appear on your desktop after the installation is complete. Click on this icon to open the standalone RRC application.

The standalone application can be uninstalled using the Add or Remove Programs function in the Windows Control Panel.

Note: You must uninstall the application before installing a new version of standalone RRC.

Opening RRC from a Web Browser

Your device features web browser-access capabilities and can provide a connection from any Windows-based, remote PC running Microsoft Internet Explorer 6.0/7.0.

Security Settings

To access a device via the web, your web browser must be configured appropriately on the Internet Explorer security settings tab. Specifically:

- "Download Signed ActiveX controls" should be set to either Enable or Prompt.
- "Run ActiveX controls and plug-ins" should be set to either Enable or Prompt.

Consult your Microsoft Internet Explorer documentation for additional information.

Note: Microsoft Windows 2000, Microsoft Windows XP, and Microsoft Windows 2003 restrict certain types of users from downloading and running ActiveX controls and plug-ins regardless of the settings in Internet Explorer. Consult your Microsoft Windows documentation for more information.

► To open RRC:

1. Ensure that your browser security settings are configured appropriately and type the IP address assigned to your device in the URL field of your web browser. See the Initial Configuration section in the device user guide for additional information on configuring IP addresses.

Note: Devices ship with the default IP address of 192.168.0.192. Note that an IP address must be used. Host names are not currently supported.

You will be redirected to an HTTPS (128-bit) secure webpage so you can open RRC.

2. Depending on your browser and its security configuration, you may see any or all of the following dialogs asking you to confirm you want to access and open an externally-provided application. Click Yes to accept these prompts.

Removing RRC from the Browser Cache

- To remove RRC from your browser cache for any reason, follow the standard procedure for your web browser software.
- **To remove cached files in Internet Explorer v6.0:**
1. If you have used RRC recently, exit all instances of Internet Explorer and restart Internet Explorer.
 2. On the Internet Explorer Tools menu, choose Internet Options.
 3. When the Internet Options dialog appears, click on the General Settings tab and then click Delete Files.
 4. Click on the Settings tab and then click View Objects.
 5. Internet Explorer will display a list of cached objects. Select any entries named "TeleControl Class," "Raritan Console," or "Power Board" and delete them.

Operation

Window Layout

MPC Interface

MPC functions are grouped into six general sections on the page. As a standalone product or using a web browser, the MPC window contains these main sections.

RRC Interface

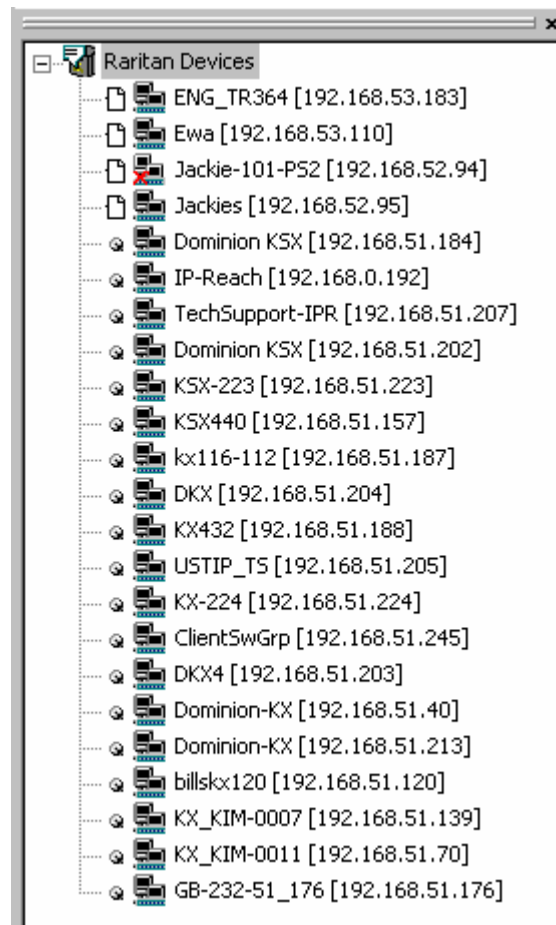

The RRC window is almost identical to the MPC window.

Navigator

The navigator provides a tree view of every known Raritan device. From this panel, you can access all Raritan networked devices for which a connection profile exists and/or all Raritan devices automatically identified on the network.

Note: Automatic Raritan device identification uses the UDP protocol and will typically identify all Raritan devices on your subnet. Network administrators rarely allow UDP broadcasts to function outside of a subnet. Automatic Raritan device identification will find only those Raritan devices that are configured to use the default TCP Port (5000) or another broadcast port, which is defined on the Advanced tab of the Options dialog (choose Tools > Options to access the Options dialog).

Devices in the MPC Navigator

In MPC, devices are named according to the Manager Name field on the Manager's Network Configuration page. Dominion devices are named according to the Device Name field on the Dominion Console Network Settings page.

Devices in the RRC Navigator

In RRC, profiled devices are listed in the Navigator according to the data in the Description field of the device's profile. Automatically-identified devices will be identified according to the name assigned to them in that device's network configuration setting.

Device Ports in the Navigator

For each device to which you are connected, you are able to expand the tree associated with it to see each device port to which you have access. Ports with a green icon indicate that you are connected to that port. The port that is bolded in the Navigator indicates that it is the port currently displayed (active) in the remote desktop area of the application.

If no name is assigned to a port, by default it is listed in the Navigator as 'Unnamed' for Generation 1 devices and, for the KX II, as Dominion_KX2_PortN (N = port number).

Depending on the maximum number of KVM sessions the device can handle at once, if all device ports to which you are connecting are already occupied, an alert message appears and you must wait until one of the ports is available in order to connect.

Navigator Icons

Each device in the Navigator is assigned two icons. One icon represents the device's connection profile and the other icon represents its network status. A connection profile is generally created by a user in order to store personalized information about specific devices (see **Connection Profiles** (on page 73) for additional information). The connection status indicates the current status of the device.

Device Connection Profile Icons (Left Icon)

Icon	Description
	Profiled - A network connection profile exists for this device.
	Modem Profile - A modem connection profile exists for this device.
	Not Profiled - The device was found on the network but a connection profile does not exist for it.

Device Network Status Icons (Right Icon)

Icon	Description
	Connected (green) - You are currently authenticated and connected to this device.
	Available (black) - This device is currently available on the network but you are not currently connected to it.
	Unavailable - A profile exists for this device but it is not currently available on the network. (Note that all devices to which you <i>are not</i> currently connected and that have modem profiles will use this icon.)

Port Connection Status Icons

For each server port listed in the Navigator, the following icons can be associated with it depending on its status:

Icon	Description
	Connected
	Available for connection.
	Unavailable (either no device is connected or access is blocked).
	In use by another user (may be unavailable depending on permissions).

Customizing the Navigator

Use specific tools in the toolbar to customize some Navigator attributes:

Icon	Action	Description
	Display/Hide Navigator	You can also select Navigator in the View menu to toggle between displaying and hiding the Navigator.
	Refresh Navigator	Updates the device status information displayed in the Navigator.
	Browse Discovered Devices	<p>When enabled, Show Discovered Devices will display devices that are “not profiled” but have been found on the network. This option can also be enabled by choosing View > Show > Discovered Devices.</p> <hr/> <p><i>Note: The Browse Discovered Devices option is the only method of connecting to a Raritan device configured to use a DHCP IP address.</i></p>

MPC Navigator Tabs

MPC tabs at the base of its Navigator pane. These tabs allow you to change how you display devices. Click the View By Name tab to sort the list alphabetically by name, click the View By IP tab to sort the list numerically by IP address, or click on the View by Host Name tab to sort the list alphabetically by display name.

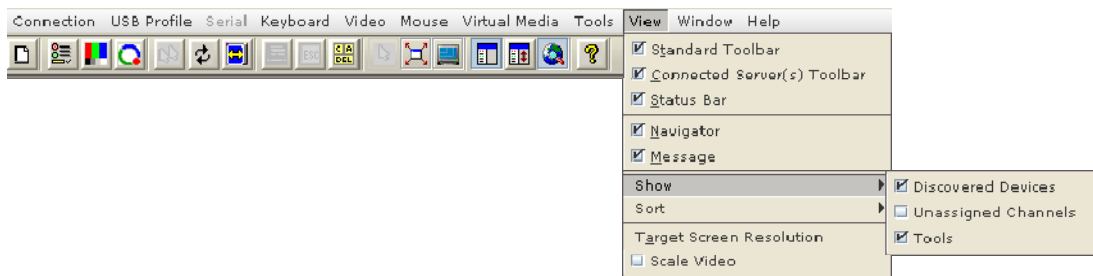

These tabs are available only in the MPC interface.

Navigator Display and Sort Options

To better organize your view of all ports, use the Show and Sort options in the View menu. Note that you do not need an open connection to a target to show and sort targets in the Navigation panel.

Showing Ports

- Discovered Devices - Shows or hides discovered devices from the Navigator view. You will not see broadcast messages when this option is disabled (not selected).
- Unassigned Channels - Shows or hides channels with no assigned targets. Note that the default for Generation 1 (G1) devices is to show unassigned channels (option is enabled), whereas the default is to hide unassigned channels (option is disabled) for Generation 2 (G2) devices.
- Tools - Shows or hides the Admin and Diagnostic ports.

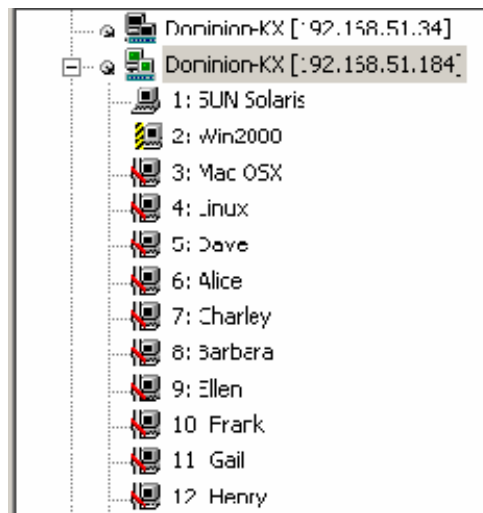

Note: These settings are saved from session to session.

Sorting Ports

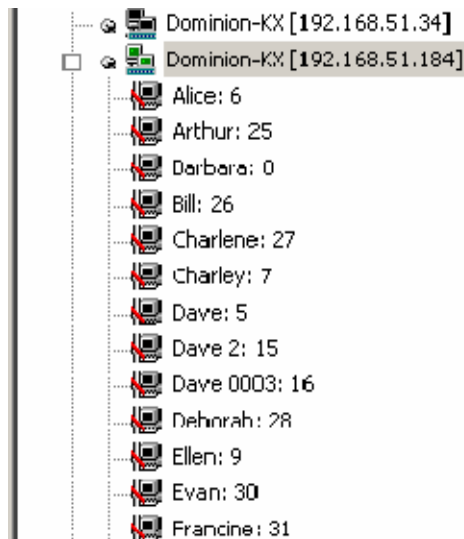

Use the Sort options on the View menu to organize port information. You are able to sort ports by channel number, channel name, or channel status.

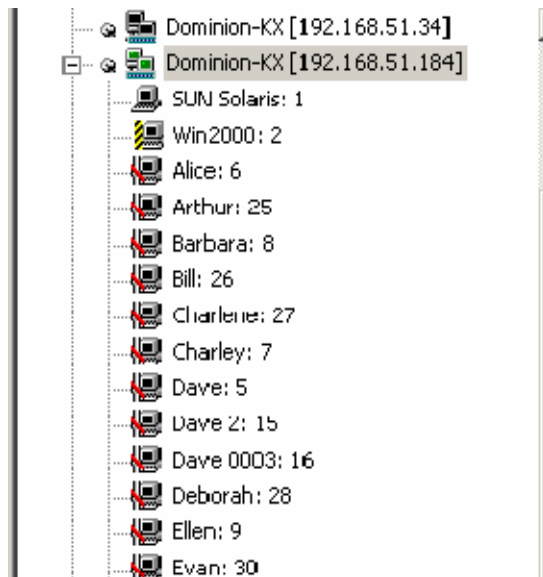

- Channel Number - When sorted by channel (View > Sort > Channel), ports are listed numerically.

- Name - When sorted by name (View > Sort > Name), port names are sorted alphanumerically within each group.

- Status - When sorted by status (View > Sort > Status), ports are sorted in the following order:
 - Active Channels
 - Busy Channels
 - Available Devices
 - Unavailable Devices

Note: Sorting ports does not apply to KX II-101.

Toolbars

Standard Toolbar

The Standard toolbar provides one-click access to the most frequently-used commands.

► To display the Standard toolbar:

- Choose View > Standard Toolbar.

Following is a list of the buttons in the standard toolbar as well as a description of the action performed once the buttons are selected. Additionally, if there are menu options or shortcut menu options that will perform the same task, they are listed, too.

Button	Button Name	Description
	New Profile	Creates a new Navigator entry for a Raritan device. Same result as choosing Connection > New Profile in the menu.
	Connection Properties	Opens the Modify Connection Properties dialog from which you can manually adjust bandwidth options (such as connection speed, color depth, and so forth). Same as choosing Connection > Properties or choosing Connection Properties on the shortcut menu, which is opened by pressing Ctrl+Left Alt+M.
	Video Settings	Opens the Video Settings dialog, allowing you to manually adjust video conversion parameters. Same as choosing Video > Video Settings or choosing Video Settings on the shortcut menu, which is opened by pressing Ctrl+Left Alt+M.
	Color Calibration	Adjusts color settings to reduce excess color noise. Same as choosing Video > Color Calibrate.

Button	Button Name	Description
	Synchronize Mouse	<p>In dual-mouse mode, forces realignment of the target server mouse pointer with the mouse pointer.</p> <p>Same as choosing Mouse > Synchronize Mouse or choosing Synchronize Mouse on the shortcut menu, which is opened by pressing Ctrl+Left Alt+M.</p>
	Refresh Screen	<p>Forces a refresh of the video screen.</p> <p>Same as choosing Video > Refresh Screen or choosing Refresh Screen on the shortcut menu, which is opened by pressing Ctrl+Left Alt+M.</p>
	Auto-sense Video Settings	<p>Forces a refresh of the video settings (resolution, refresh rate).</p> <p>Same as choosing Video > Auto-sense Video Settings.</p>
	Enter On-Screen Menu	<p>Not applicable for the device. Used by the application with other Raritan products.</p> <p>Same as choosing Keyboard > Enter On-Screen Menu.</p>
	Exit On-Screen Menu	<p>Not applicable for IP-Reach or Dominion. Used by the application with other Raritan products.</p> <p>Alternatively, select Esc on the keyboard. Same as choosing Keyboard > Exit On-Screen Menu.</p> <hr/> <p><i>Note: This function is not available on the KSX II.</i></p>
	Send Ctrl+Alt+Del	<p>Sends a Ctrl+Alt+Del hot key combination to the target server.</p> <p>Same as choosing Keyboard > Send Ctrl+Alt+Del.</p>

Button	Button Name	Description
	Single Cursor Mode	<p>Starts Single Cursor mode in which the local mouse pointer no longer appears onscreen.</p> <p>Same as choosing Mouse > Single Cursor Mode. Press Ctrl+Alt+X to exit this mode. Alternatively, choose Single/Double Cursor from the shortcut menu, which is opened by pressing Ctrl+Left Alt+M.</p>
	Full Screen Mode	<p>Maximizes the screen real estate to view the target server desktop.</p> <p>Same as choosing View > Target Screen Resolution (in MPC) or Full Screen (in RRC). Alternatively, press Ctrl+Left Alt+M to open the shortcut menu and then choose Full/Normal Screen or press the F key on your keyboard.</p>
	Scaling	Increases or reduces the target video size so you can view the entire contents of the target server window without using the scroll bar.
	Show/Hide Navigator	<p>Toggles the Navigator panel between visible and hidden.</p> <p>Same as choosing View > Navigator.</p>
	Refresh Navigator	Forces a refresh of the data displayed in the Navigator.
	Show/Hide Browse All Devices	Toggles between displaying and not displaying Raritan devices in the Navigator that are automatically identified on the network and that do not have preconfigured profiles associated with them.
	About	<p>Displays the application version information.</p> <p>Same as choosing Help in the menu bar.</p>

MPC Connected Server(s) Toolbar

The Connected Server(s) toolbar is comprised of a button for each connected target server port, thus enabling quick access to connected targets. When you connect to a port, a button corresponding to that port is added to the toolbar and labeled with the name of the port. Conversely, when you disconnect from a port, the corresponding button is removed from the toolbar.

Note: In Single Mouse mode, the Connected Server(s) Toolbar appears on the target but cannot be accessed.

By default, the Connected Server(s) toolbar is enabled (visible). To disable it, deselect Connected Server(s) Toolbar in the View menu. Buttons corresponding to windows that do not support full screen mode are not shown in the toolbar. For example, serial ports, generation one (G1) admin ports, and G1 diagnostic ports will not be displayed in the toolbar in full screen mode.

While in full screen mode, you are able to view the Connected Server(s) toolbar by hovering your mouse over the top of the screen. To use this feature, the Connected Servers Toolbar option must be selected in the View menu.

► **To display the Connected Server(s) toolbar (when not already visible):**

- Choose View > Connected Server(s) Toolbar.

► **To view the window for a target server:**

- Click the button that corresponds to the appropriate connected target server you want to view. The window for the corresponding target server is displayed and the button for the selected port is highlighted. In full screen mode, note that this action is window swapping, not video switching.

When you click a button that is already highlighted, the corresponding window is minimized. If you click that button again, the window is brought forward and maximized.

Status Bars

MPC Status Bar

The status bar displays session information about your connection to a Raritan device. This information includes:

Diagram key	Session information	Description
1	Concurrent connections indicator	<p>Indicates that multiple remote users are currently connected to the same target server on the device.</p> <p>One icon indicates a single user is connected, and two icons indicates two or more users are connected.</p> <p>Concurrent connection ability can be set globally under PC share mode on the Manager Security Settings page or set per individual user in the Concurrent Access Mode setting on the Manager User Account Settings page. For the device, concurrent connection ability can be set using the PC Share Mode option in the Security Settings page: PC-Share permits concurrent access and Private limits server access to one user at a time.</p>
2	Lock key indicators	<p>Indicates the status of the current target KVM Server, in respect to the activation of the Caps-Lock, Num-Lock, and Scroll-Lock keys. If these keys are enabled on the target server being viewed, this affirmative status will be reflected on the status bar.</p>

Note: If a light is used on your keyboard to indicate the Scroll Lock, Num Lock, and Caps Lock key is active, it may or may not be in sync with the lock key indicator status displayed on the status bar. See the status bar as your guide if this occurs.

RRC Status Bar

The status bar displays session information about your connection to a Raritan device. This information includes:

Diagram key	Session information	Description
1	Video sensing status/path indicator	Indicates when video sensing occurs during connections to target KVM server ports.
2	Bandwidth usage indicator	<p>Indicates how much of your total available bandwidth is currently being used. The connection speed setting determines total available bandwidth.</p> <p>This setting is defined on the Compression tab of the Connection Properties dialog, which is accessed by choosing Connection > Properties, or pressing Ctrl+Left Alt+ M and then choosing Connection Properties.</p>
3	Security indicator	<p>Indicates whether the current remote connection is protected by encryption. Encryption requirements are set during configuration of your Raritan device.</p> <p>When a device is configured for no encryption or SSL authentication, the Security Indicator is represented on the status bar by an open lock icon.</p> <p>When SSL authentication, data encryption, or SSL encryption is applied, the security indicator is represented on the status bar by a closed lock.</p>

Diagram key	Session information	Description
	Concurrent connections indicator	<p>Indicates that multiple remote users are currently connected to the same target server on the device.</p> <p>One icon indicates a single user is connected, and two icons indicates two or more users are connected.</p> <p>Concurrent connection ability can be set globally under PC share mode on the Manager Security Settings page or set per individual user in the Concurrent Access Mode setting on the Manager User Account Settings page. For the device, concurrent connection ability can be set using the PC Share Mode option in the Security Settings page: PC-Share permits concurrent access and Private limits server access to one user at a time.</p>
	Lock key indicators	<p>Indicates the status of the current target KVM Server, in respect to the activation of the Caps-Lock, Num-Lock, and Scroll-Lock keys. If these keys are enabled on the target server being viewed, this affirmative status will be reflected on the status bar.</p>

Note: If a light is used on your keyboard to indicate the Scroll Lock, Num Lock, and Caps Lock key is active, it may or may not be in sync with the lock key indicator status displayed on the status bar. See the status bar as your guide if this occurs.

Screen Modes

Besides a standard view, full screen view and a scaling option are available. These options increase the remote desktop area and make viewing the target video easier.

MPC Target Screen Resolution Mode

Target Screen Resolution mode provides you with the ability to view the target server desktop in full screen mode, which removes all toolbars from view.

Activate Target Screen Resolution mode once you are connected to a target by doing one of the following:

- Click the Full Screen button  in the toolbar and then click OK in the confirmation message that appears.
- Choose View > Target Screen Resolution and then click OK in the confirmation message that appears.
- Press Ctrl+Left Alt+M to open the shortcut menu. Next, press the F key on your keyboard or use your mouse to choose Full/Normal Screen. Click OK in the confirmation message that appears.

To exit full screen mode, use the shortcut menu or click the Close icon

that appears at the top right of the page when you hover your mouse along the top of the screen.

Note: The Ctrl+Left Alt+M key combination does not work for certain target servers if you are running JRE 1.5.0_01. To return from full page mode, use Alt+Tab and choose MPC.

While in full screen mode, you are able to view the Connect Server toolbar by hovering your mouse over the top of the screen. To use this feature, the Connected Servers Toolbar option must be selected in the View menu.

Additionally, while in full screen mode, your monitor's resolution may be adjusted to match the resolution of the target server (provided your graphics system supports it). If your graphics system does not support the resolution of the target system, you will be unable to activate full screen mode and a message will appear requesting that you change your video resolutions first.

Tip: To view the video resolutions your system supports in a Windows environment, access your computer's Control Panel from the Windows Start menu, double-click Display, and click the Settings tab.

RRC Full Screen Mode

Full screen mode removes the surrounding RRC graphical interface and your local desktop area, filling your screen with the video from the target server. Your screen's resolution will be adjusted to match the resolution of the target server (provided your graphics system supports it). If your graphics system does not support the resolution of the target system, you will be unable to activate full screen mode and a message will appear requesting that you change your video resolutions first.

Note: To view the video resolutions your system supports in a Windows environment, access your computer's Control Panel from the Windows Start menu, double-click on Display, and click on the Settings tab.

Activate full screen mode in one of the following ways once you are connected to a target:

- Click the Full Screen icon  in the toolbar and then click OK in the confirmation message that appears.
- Choose View > Full Screen and then click OK in the confirmation message that appears.
- Press Ctrl+Left Alt+M to open the shortcut menu. Next, press the F key on your keyboard or use your mouse to choose Full/Normal Screen. Click OK in the confirmation message that appears.

MPC Scaling

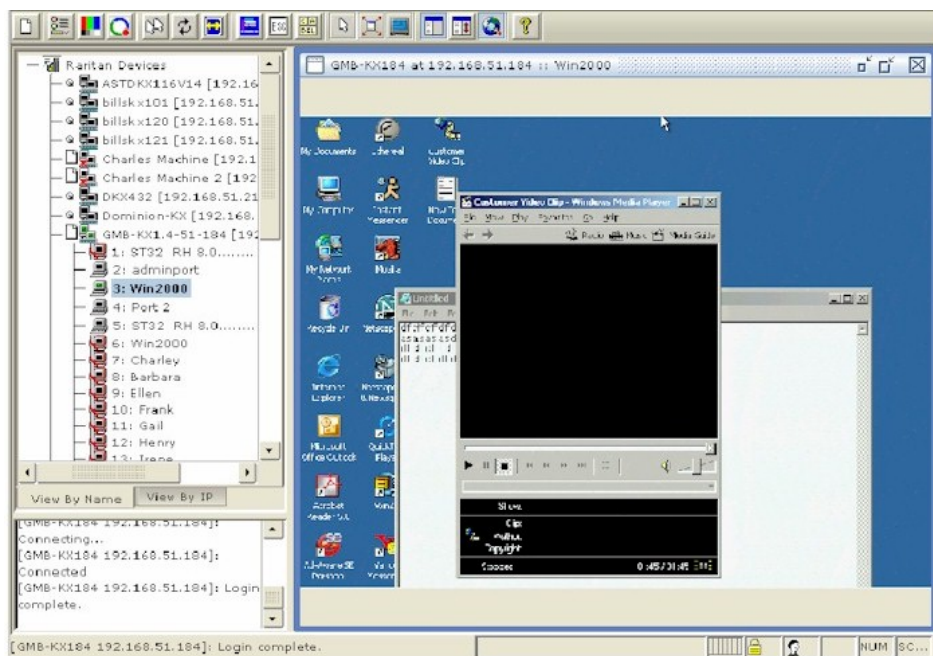

Scaling your target window size allows you to view the entire contents of the target server window. This feature increases or reduces the size of the target video to fit the window size and maintains the aspect ratio. This allows you to see the entire target server desktop while in standard view.

► To activate Scaling, do one of the following:

- Choose View > Scale Video.

- Click the Scaling button  on the toolbar.
- To exit this mode and return the target window to its previous size, deselect Scale Video on the View menu or click the Scaling button once again.

Note: Enabling Scale Video will scale the complete target video image to fit the remote desktop area as it grows or shrinks. You can combine this setting with target screen resolution for a full page affect on targets with a higher resolution than your desktop.

RRC Scaling

Scaling your target window size allows you to view the entire contents of the target server window. This feature increases or reduces the size of the target video to fit the window size and maintains the aspect ratio. This allows you to see the entire target server desktop while in standard view.

To activate Scale Video mode, do one of the following:

- Choose View > Scale.

- Click the Scaling button  on the toolbar.

To exit this mode and return the target window to its previous size, choose Scale on the View menu or click the Scaling button once again.

Note: Enabling Scale Video will scale the complete target video image to fit the remote desktop area as it grows or shrinks. You can combine this setting with target screen resolution for a full page affect on targets with a higher resolution than your desktop.

Auto-Scroll

The auto-scroll feature automatically scrolls the video display in the direction of the cursor as the cursor approaches the edge of the display. A thin border appears around the perimeter of the remote desktop area to indicate the function is on. When enabled, if you see scroll bars and then move the cursor onto the border, the page will automatically scroll in the appropriate direction.

The scroll border is activated by selecting Show Scroll Borders in the Options dialog, which is accessed by choosing Tools > Options.

Connection Profiles

Connection profiles store important information about your Raritan device such as the IP address, custom TCP ports, preferred compression settings, and custom security keys. A profile is required to access devices outside your subnet and to access devices using a dial-up connection.

Through profiles, you can set up personalized connections. These profiles are not shared among other users.

The information collected when creating a new connection profile will differ based on Generation 1 and Generation 2 devices.

Tip: If your Raritan device is configured to use a custom TCP port or a group security key, first create a connection profile so that you can access the device.

Creating, Modifying and Deleting Profiles in MPC

► To create a profile:

1. There are two ways to create a profile:
 - For automatically discovered devices, right-click the device name in the Navigator and choose Add Profile from the shortcut menu.
 - For other devices, choose Connection > New Profile.

The Add Connection dialog appears. Options are organized into three tabs.

Note: The Connection and Security tabs are not available for Generation 2 devices.

Connect tab

1. On the Connect tab, type a meaningful description of the device in the Description field (up to 32 alphanumeric and special characters are allowed). This description identifies the Raritan device in the Navigator.
2. From the Product drop-down, choose the Raritan product you are using.

TCP/IP connections

3. Select the type of connection from the Connection Type drop-down.
 - a. If TCP/IP Connection is selected for a LAN/WAN connection, complete the information in the "Find Raritan device By" section:
 - Type the IP address assigned to your Raritan device.
 - Type the name assigned to your Raritan device during initial setup.

- Type the Domain Name Server (DNS) name. Use this option if you use a DNS server to resolve a DNS name to the IP address assigned to your Raritan device.

The screenshot shows the 'Add Connection' dialog box with the 'Connect' tab selected. The 'Description' field is empty. The 'Product' dropdown is set to 'Dominion KX G1'. The 'Connection Type' dropdown is set to 'TCP/IP Connection'. Under 'Find Raritan device By:', the 'IP Address' radio button is selected. The 'Use Default Port Number' checkbox is checked, and the 'Port Number' is set to 8000. The 'OK' and 'Cancel' buttons are at the bottom right.

Dial-up connections

- a. Select Dial Up Connection from the Connection Type drop-down for a direct analog modem connection to the Raritan device. Type the parameters that should be used to establish a connection.
- Enter the phone number for the dial-up connection. Remember to include any additional codes that should be dialed to establish a connection, such as country codes, area codes, or outside line access codes.
 - Select the modem (as configured in Windows) from the drop-down list that will be used to dial and connect to your Raritan device.

Note: For security reasons, you must use the MPC standalone client if you require modem access. Further, one modem on a client PC can be used for only one device connection.

4. Select the Use Default Port Number checkbox to use the default port number (5000). For TCP Ports, devices are automatically configured to use TCP Port 5000 when communicating with the client.

If you do not want to use the default port number, deselect the checkbox and type the port number in the Port Number field.

Compression Tab

1. Set the Connection Speed.

Use this setting to manually adjust the connection speed to accommodate bandwidth constraints. Devices can automatically detect available bandwidth and not limit bandwidth use. However, you can also adjust this usage according to your needs. Depending on the Raritan device in use, different options may be available:

- Auto Detect
- 1G Ethernet
- 100mb Ethernet
- 10mb Ethernet
- 1.5mb (Max DSL/T1)
- 1mb (Fast DSL/T1)
- 512 kb (Medium DSL/T1)
- 384 kb (Slow DSL/T1)
- 256 kb (Cable)
- 128 kb (Dual ISDN)

- 56 kb (ISP Modem)
- 33 kb (Fast Modem)
- 24 kb (Slow Modem)

Note: Raritan recommends that if you are connecting to the via modem, you set the connection speed to 33kb.

2. Set the Color Depth.

Devices can dynamically adapt the color depth transmitted to remote users in order to maximize usability in all bandwidths. Select from among the options in the drop-down list. Depending on the Raritan device in use, different options may be available:

- 15-bit RGB Color
- 8-bit RGB Color
- 4-bit Color
- 4-bit Gray
- 3-bit Gray
- 2-bit Gray
- Black and White

Important: For most administrative tasks (server monitoring, reconfiguring, and so forth), administrators do not require the full 24-bit or 32-bit color spectrum made available by most video graphics cards. Attempting to transmit such high color depths wastes network bandwidth.

Note: If you are connecting to the via a modem, Raritan recommends setting the color depth to 4-bit gray.

3. Select Progressive Update to increase the usability in constrained bandwidth environments. When Progressive Update is enabled, the device initially sends an image of the remote desktop at lower color depths. Higher color depth images are provided as the bandwidth allows.

Note: When Color Depth is set to Auto Select Color (default), Progressive Update is automatic. The device will enable/disable Progressive Update as required, disabling it for fast connections and enabling it for slow connections.

4. Selecting the Internet Flow Control checkbox ensures that packets transmitted by the device are received and reconstructed by the client application in the correct order. This is useful when using a device over an unpredictable public WAN (particularly in international scenarios).

5. Use the slider to select the desired level of video Smoothing (15-bit mode only). The level determines how aggressively to blend page regions with small color variation into a single, smooth color. Smoothing improves the appearance of the target video by reducing the video noise that is displayed.
6. Select "Frames per second". This setting instructs MPC on how often to redraw the video display of the target. This only affects the client display behavior and has no bearing on the data rate of the video being sent to the client. Setting this option higher makes the video appear smoother but also requires more processing power.

Security Tab

1. Enter the private security key in the Private Key field if your device is configured to use a private security key. Entering a security key allows you to gain the authorization required to initiate a connection to that device.
2. Retype the private security key in the Confirm Private Key field to ensure no typographical errors were made.

3. Click OK to create the connection profile.

► **To modify a profile:**

1. Select the device in the Navigator panel and right-click it.
2. Choose Modify Profile. The Modify Connection dialog appears.
3. Update the fields as appropriate.
4. Click OK.

► **To delete a profile:**

1. Select the device with a profile in the Navigator and right-click it.
2. Choose Delete Profile.
3. When prompted to confirm the deletion, click Yes to delete the profile for this device or click No to return to the application without deleting.

Note: The only supported modem connections to the Administrative functions in MPC. Port functions are not supported via modem.

Creating, Modifying and Deleting Profiles in MPC - Generation 2 Devices

► **To create a profile:**

1. There are two ways to create a profile:
 - For automatically discovered devices, right-click the device name in the Navigator and choose Add Profile from the shortcut menu.
 - For other devices, choose Connection > New Profile.
The Add Connection dialog appears. Options are organized into three tabs.

Note: The Connection and Security tabs are not available for Generation 2 devices.

2. On the Connect tab, type a meaningful description of the device in the Description field (up to 32 alphanumeric and special characters are allowed). This description identifies the Raritan device in the Navigator.
3. From the Product drop-down, choose the Raritan product you are using.
4. Select the type of connection from the Connection Type drop-down.

TCP/IP connections

- a. If TCP/IP Connection is selected for a LAN/WAN connection, complete the information in the "Find Raritan device By" section:
 - Type the IP address assigned to your Raritan device.
 - Type the name assigned to your Raritan device during initial setup.
 - Type the Domain Name Server (DNS) name. Use this option if you use a DNS server to resolve a DNS name to the IP address assigned to your Raritan device.

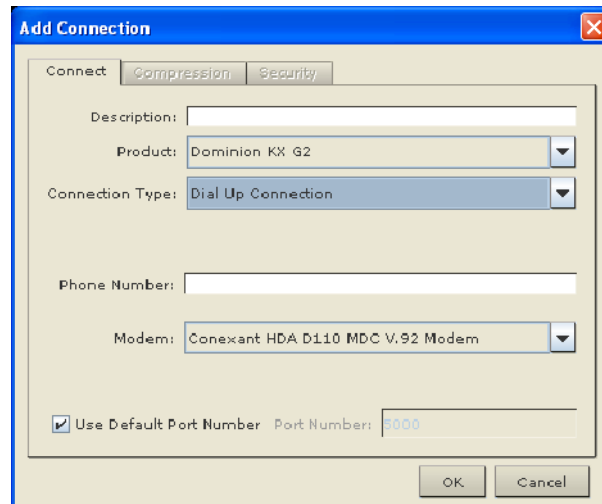

The screenshot shows the 'Add Connection' dialog box with the 'Connect' tab selected. The 'Description' field contains 'Device A'. The 'Product' dropdown menu is set to 'Dominion KX G2'. The 'Connection Type' dropdown menu is set to 'TCP/IP Connection'. Under the 'Find Raritan device By:' section, the 'IP Address' radio button is selected. Below this, there are three empty text input fields for 'Device Name' and 'Host Name'. At the bottom, the 'Use Default Port Number' checkbox is checked, and the 'Port Number' field displays '5000'. The 'OK' and 'Cancel' buttons are located at the bottom right of the dialog.

Dial-up connection

- a. Select Dial Up Connection from the Connection Type drop-down for a direct analog modem connection to the Raritan device. Type the parameters that should be used to establish a connection.
 - Enter the phone number for the dial-up connection. Remember to include any additional codes that should be dialed to establish a connection, such as country codes, area codes, or outside line access codes.

- Select the modem (as configured in Windows) from the drop-down list that will be used to dial and connect to your Raritan device.

Note: For security reasons, you must use the MPC standalone client if you require modem access. Further, one modem on a client PC can be used for only one device connection.

5. Select the Use Default Port Number checkbox to use the default port number (5000). For TCP Ports, devices are automatically configured to use TCP Port 5000 when communicating with the client.

If you do not want to use the default port number, deselect the checkbox and type the port number in the Port Number field.

Note: Dial-up is not supported in KX II-101.

► **To modify a profile:**

1. Select the device in the Navigator panel and right-click it.
2. Choose Modify Profile. The Modify Connection dialog appears.
3. Update the fields as appropriate.
4. Click OK.

► **To delete a profile:**

1. Select the device with a profile in the Navigator and right-click it.
2. Choose Delete Profile.
3. When prompted to confirm the deletion, click Yes to delete the profile for this device or click No to return to the application without deleting.

Creating, Modifying and Deleting Profiles in RRC

► To create a profile:

- There are two ways to create a profile:
 - For automatically discovered devices, right-click the device name in the Navigator and choose Add Profile from the shortcut menu.
 - For other devices, choose Connection > New Profile.

The Add Connection dialog appears. Options are organized into three tabs.

Note: The Connection and Security tabs are not available for Generation 2 devices.

The screenshot shows the 'Add Connection' dialog box with the 'Connect' tab active. The 'Description' field is empty. The 'Connection Type' dropdown is set to 'Dial Up Connection'. The 'Phone Number' field is empty. The 'Modem' dropdown is set to 'Conexant HDA D110 MDC V.92 Modem'. The 'Use Default Port Number' checkbox is checked, and the 'Port Number' is set to 5000. The 'OK' and 'Cancel' buttons are at the bottom.

Connect Tab

On the Connect tab, type a meaningful description of the device in the Description field (up to 32 alphanumeric and special characters are allowed). This description identifies the Raritan device in the Navigator.

- Select Dial Up Connection from the Connection Type drop-down for a direct analog modem connection to the Raritan device. Type the parameters that MPC or RRC should use to establish a connection. Dial up connection does not apply to Generation 2 (G2) or KX101.

- Enter the phone number for the dial-up connection. Remember to include any additional codes that should be dialed to establish a connection, such as country codes, area codes, or outside line access codes.
- Select the modem (as configured in Windows) from the drop-down list that will be used to dial and connect to your Raritan device.

Note: For security reasons, you must use the MPC standalone client if you require modem access. Further, one modem on a client PC can be used for only one device connection.

2. Select the Use Default Port Number checkbox to use the default port number (5000). For TCP Ports, devices are automatically configured to use TCP Port 5000 when communicating with the client.

If you do not want to use the default port number, deselect the checkbox and type the port number in the Port Number field.

Compression Tab

1. Set the Connection Speed.

Use this setting to manually adjust the connection speed to accommodate bandwidth constraints. Devices can automatically detect available bandwidth and not limit bandwidth use. However, you can also adjust this usage according to your needs. Depending on the Raritan device in use, different options may be available:

- Auto Detect
- 1G Ethernet
- 100mb Ethernet
- 10mb Ethernet
- 1.5mb (Max DSL/T1)
- 1mb (Fast DSL/T1)
- 512 kb (Medium DSL/T1)
- 384 kb (Slow DSL/T1)
- 256 kb (Cable)
- 128 kb (Dual ISDN)
- 56 kb (ISP Modem)
- 33 kb (Fast Modem)
- 24 kb (Slow Modem)

2. Set the Color Depth.

Devices can dynamically adapt the color depth transmitted to remote users in order to maximize usability in all bandwidths. Select from among the options in the drop-down list. Depending on the Raritan device in use, different options may be available:

- 15-bit RGB Color
- 8-bit RGB Color
- 4-bit Color
- 4-bit Gray
- 3-bit Gray
- 2-bit Gray
- Black and White

Important: For most administrative tasks (server monitoring, reconfiguring, and so forth), administrators do not require the full 24-bit or 32-bit color spectrum made available by most video graphics cards. Attempting to transmit such high color depths wastes network bandwidth.

3. Select Progressive Update to increase the usability in constrained bandwidth environments. When Progressive Update is enabled, the device initially sends an image of the remote desktop at lower color depths. Higher color depth images are provided as the bandwidth allows.

Note: When Color Depth is set to Auto Select Color (default), Progressive Update is automatic. The device will enable/disable Progressive Update as required, disabling it for fast connections and enabling it for slow connections.

4. Selecting the Internet Flow Control checkbox ensures that packets transmitted by the device are received and reconstructed by the client application in the correct order. This is useful when using a device over an unpredictable public WAN (particularly in international scenarios).

5. Use the slider to select the desired level of video Smoothing (15-bit mode only). The level determines how aggressively to blend page regions with small color variation into a single, smooth color. Smoothing improves the appearance of the target video by reducing the video noise that is displayed.

Security Tab

1. Enter the private security key in the Private Key field if your device is configured to use a private security key. Entering a security key allows you to gain the authorization required to initiate a connection to that device.
2. Retype the private security key in the Confirm Private Key field to ensure no typographical errors were made.

3. Click OK to create the connection profile.

The image shows a Windows-style dialog box titled "Add Connection". It has three tabs: "Connect", "Compression", and "Security". The "Security" tab is currently selected. Inside the dialog, there are two text input fields. The first is labeled "Private Key:" and the second is labeled "Confirm Private Key:". Below these fields, a message states: "The private key MUST match the private key set by the administrator or connections will be denied." At the bottom of the dialog, there are two buttons: "OK" and "Cancel".

Add Connection

Connect | Compression | **Security**

Private Key:

Confirm Private Key:

The private key MUST match the private key set by the administrator or connections will be denied.

OK Cancel

Establishing a New Connection

Note: Depending on your version of the JRE, you might receive a certificate message when using the standalone application to access a Dominion device. You have to accept the certificate in order to establish the connection.

To connect to a device, double-click the device's icon in the Navigator, then type your user name and password to connect. You can also right-click the device name in the Navigator and select New Connection.

Note: The default device login user name is admin and the default password is raritan. You have administrative privileges using these login credentials.

If you do not see an icon for your device in the Navigator, follow the instructions on creating new profiles, which is available in this section.

If you are having problems connecting to a device, be sure to check the following:

- User name - Raritan usernames *are not* case-sensitive.
- Password - Raritan passwords *are* case-sensitive.
- TCP Port - If you have configured your device to use a non-default TCP Port, this information must be entered into its connection profile.
- Firewall Settings - If you are accessing a device through a firewall, that firewall must be configured to allow two-way communication on TCP Port 5000 (or the custom TCP Port to which your device has been configured).
- Security Key - If you have configured your device to require a group security key, that key must be entered into the device's connection profile.

Note: If you are running MPC on Internet Explorer with both a Microsoft firewall and a non-Microsoft firewall utility installed, IE will display a message telling you that MPC is already running (even if it is not in fact running). To avoid this, deactivate one of your firewalls, or use a browser such as Mozilla or Firefox.

Connection Information

► **To obtain information about your connection:**

- Choose Connection > Connection Info. The Connection Info dialog appears.

Generation 1 Devices

The following information is displayed about a current connection to Generation 1 devices:

Connection information	Description
Device name	The name of your device.
IP address	The IP address of your device.
Port	The KVM Communication TCP/IP Port used to access the target device.
Data in/second	Data rate in.
Data out/second	Data rate out.
FPS	The frames per second transmitted for video.
Connect time	The duration of the connect time.
Horizontal resolution	The page resolution horizontally.
Vertical resolution	The page resolution vertically.
Refresh rate	How often the page is refreshed.
Protocol version	The RFB Protocol version.
Oldest supported version	The oldest supported version of the client software.
Hardware version	0 - Obsolete
Software version	3 (Software version)
Post code	Power on self-test error code. 0 = no error.
Network flags	A list of the various network options that have been enabled or disabled such as DHCP, dial-in, autodetection, and so on.
Security flags	A list of the various security options that have been enabled or disabled such as SSL encryption, SNMP, and so on.
Options	RFP and TR support enabled or disabled.
Frame grabber info	0 - not used
KME info	KME version number for systems that use the KME.
Serial Info	Serial devices
Video devices count	Number of video devices detected.

Connection information	Description
Serial devices count	Number of serial devices detected.
Reserved	0 - not used
FPS*	Frames per second

* Available only in MPC.

► **To copy this information:**

- Click Copy to Clipboard in the Connection Info dialog. The information is now available to be pasted into the program of your choice.

Generation 2 Devices

The following information is displayed about a current connection to Generation 2 devices:

Connection information	Description
Device name	The name of your device.
IP address	The IP address of your device.
Port	The KVM Communication TCP/IP Port used to access the target device.
Data in/second	Data rate in.
Data out/second	Data rate out.
FPS	The frames per second transmitted for video.
Connect time	The duration of the connect time.
Horizontal resolution	The page resolution horizontally.
Vertical resolution	The page resolution vertically.
Refresh rate	How often the page is refreshed.
Protocol version	The RFB Protocol version.

► **To copy this information:**

- Click Copy to Clipboard in the Connection Info dialog. The information is now available to be pasted into the program of your choice.

Connecting to a Remote KVM Console

Once you establish a connection with a Raritan device, that device's icon in the Navigator can be expanded to display all ports enabled for remote access.

Choose one of the following options to establish a remote KVM console connection:

- Double-click the KVM port. This method closes any previous connection before connecting to the new port.
- Right-click the port and choose Switch from the shortcut menu. This method closes any previous connection before connecting to the new port.
- Right-click the port and choose New Connection from the shortcut menu. This method allows you to connect to the selected port without closing any previous connections and creates a new connection if the device supports multiple concurrent connections.

Once connected, Raritan KVM over IP devices display real-time video output of the target server (this video is compressed and encrypted according to the configuration settings specified by the administrator). You now have complete, low-level control of the KVM console as if you were physically located next to the server.

- To close a connection, right-click the connected device and choose Disconnect.
- To exit completely, choose Connection > Exit.

Closing a Remote Connection

► To close the connection:

1. Select the device in the Navigator and right-click it.
2. Choose Disconnect from the shortcut menu.

3. To exit completely, click Exit on the Connection menu

Shortcut Menu

To access the shortcut menu, use either the default keyboard combination of Ctrl+Left Alt+M or the keyboard combination you assign. See ***Changing the Shortcut Menu Keyboard Combination*** (on page 91) for more information.

TIP: If at some point you forget the keyboard combination used to open the shortcut menu, press Ctrl+Left Alt at the same time. The keyboard combination will be displayed across the bottom of the page for five seconds.

Shortcut Menu Key Options

Execute any of the commands on the shortcut menu by either choosing the command in the menu or using a key combination. If you are using a key combination to execute a command, you will press Ctrl+Left Alt+M and then press the key on your keyboard that corresponds to the underlined letter in the shortcut menu. For example, press Ctrl+Left Alt+M+F to enter full screen mode. See the table below for information on invoking commands from the shortcut menu using keyboard combinations.

Note: You must use the Left Alt key on your keyboard when using the Ctrl+Left Alt combination.

To	Press Ctrl+Left Alt+M+
Toggle between Full/Normal screen mode*	F
Display connection information*	I
Display or set connection properties*	P
Display or set video settings*	V
Refresh the page	R
Synchronize mouse	Y
Change to/from single/double cursor mode	S
Send Ctrl+Alt+Del to the target system	D
Connect Drive	T
Connect CD-ROM/ISO Image	E
Send Ctrl+Alt+M to the target system	N
Exit a dialog or menu without altering the keyboard state	Esc

* If full screen mode is active, executing this command will automatically end full screen mode.

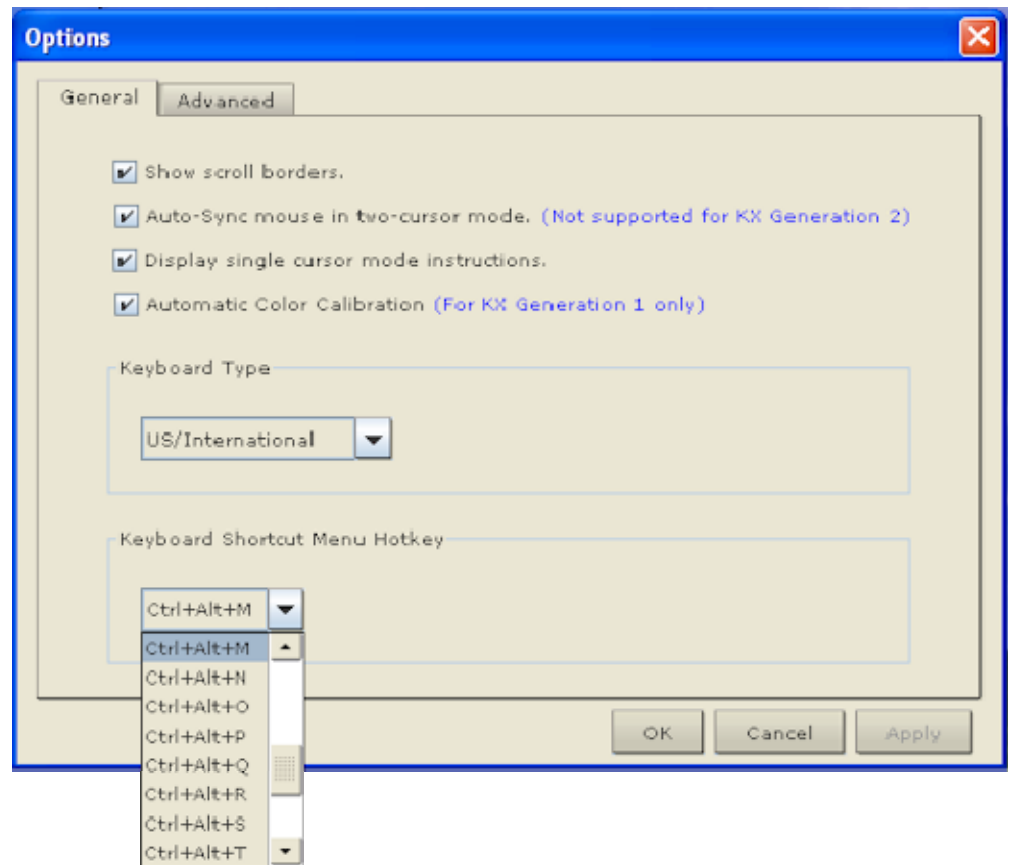

Changing the Shortcut Menu Keyboard Combination

► **To change the keyboard combination, do the following:**

1. Choose Tools > Options to open the Options dialog.
2. From the Keyboard Shortcut Menu HotKey drop-down, select the keyboard combination you want to use to open the shortcut menu.

3. Click OK or Apply.

Once a new keyboard combination is assigned, the new combination will be displayed in the shortcut menu and in the onscreen message that displays when the combination is used.

Keyboard Macros

A hot key combination is a set of keystrokes that performs an action when pressed. For example, the hot key combination Ctrl+Alt+0 might be created to minimize all windows.

A keyboard macro is a shortcut that sends a hot key combination to a target server. Using keyboard macros ensures that hot key combinations intended to be used on the target server are sent to and interpreted only by the target server, and not by the computer on which the client is running.

Raritan strongly suggests the use of keyboard macros instead of hot key combinations since certain hot key combinations have been found not to work properly, depending on the platform and behavioral difference between the application and web browser version. Specifically, using hot keys can result in your own client PC intercepting the command and performing the action instead of sending the command to the target server as intended.

Note: In MPC, foreign keyboard layouts are not supported when using keyboard macros, except for those keys listed in the Add Keyboard Macro dialog for Japanese and Korean.

Building a Keyboard Macro

► To build a macro:

1. Click Keyboard > Keyboard Macros. The Keyboard Macros dialog appears.
2. Click Add. The Add Keyboard Macro dialog then appears.
3. Type a name for the macro in the Keyboard Macro Name field. This name will appear in the Keyboard menu after it is created.
4. From the Hot-Key Combination field, select a keyboard combination from the drop-down list. This allows you to execute the macro with a predefined keystroke. **Optional**
5. In the Keys to Press drop-down list:
 - a. Select each key you would like to use to emulate keystrokes. Select the keys in the order by which they are to be pressed.
 - b. After each selection, select Press Key. As each key is selected, it will appear in the Keys to Release field.

For example, select the Windows key and the letter D key. When these keys are selected in the client, the macro will be executed. Add a key release attribute to the macro if needed (see next step).

6. In the Keys to Release field:

- a. Choose each key for which you would like to emulate a key release. Define the keys you want released in order to run the macro.

For example, specify that the keys to be pressed must also be released in order for the macro to be executed. Select the keys in the order by which they are to be released.

- b. Click Release Key after each selection.

7. Review the Macro Sequence field to be sure the macro sequence is defined correctly.

The contents of this field are automatically generated and are based on the selections made in the Keys to Press and Keys to Release fields.

- a. To remove a step in the sequence, select it and click Remove.
- b. To change the order of steps in the sequence, click the step and then click the up or down arrow buttons to reorder them as needed.

8. Click OK to save the macro. Click Clear to clear all field and start over. When you click OK, the Keyboard Macros dialog appears and lists the new keyboard macro.

Add Keyboard Macro

Keyboard Macro Name:

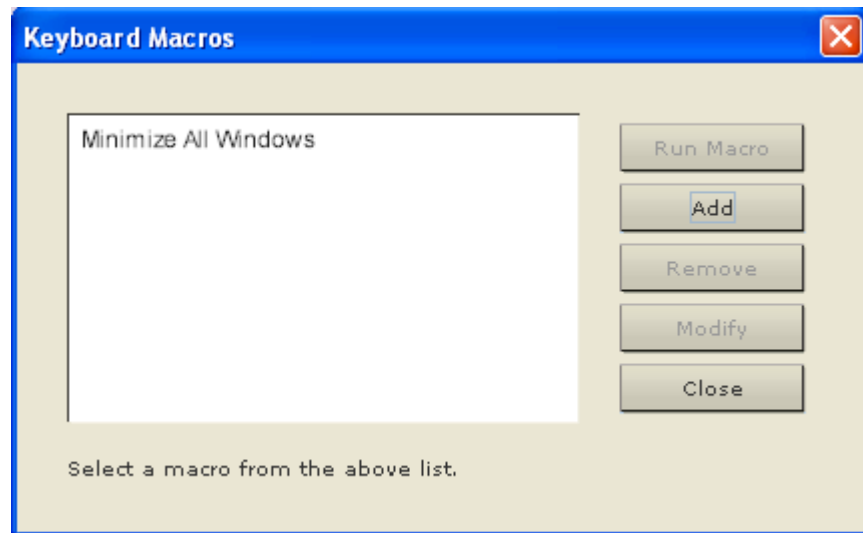

Hot-Key Combination:

Keys to Press	Keys to Release	Macro Sequence
<div><div>All Keys</div><div>Left Ctrl Right Ctrl Left Alt Right Alt Left Shift Right Shift Scroll Lock Caps Lock</div></div>		<div>Press Left Ctrl Release Left Ctrl</div>

Press Key Release Key Remove ^ v

OK Cancel Clear

9. Click Close to close the Keyboard Macros dialog. The macro will now appear on the Keyboard menu in the application. Select the new macro on the menu to run it or use the keystrokes you assigned to the macro.

Running a Keyboard Macro

Once you have created a keyboard macro, execute it using the keyboard macro you assigned to it or by choosing it from the Keyboard menu.

Run a Macro from the Menu Bar

When you create a macro, it appears under the Keyboard menu. Execute the keyboard macro by clicking on it in the Keyboard menu.

Run a Macro Using a Keyboard Combination

If you assigned a keyboard combination to a macro when building it, you can execute the macro by pressing its assigned keystrokes. For example, press the keys Ctrl+Alt+0 simultaneously to minimize all windows on a Windows target server.

Modifying and Removing Keyboard Macros

► To modify a macro:

1. Choose Keyboard > Keyboard Macros. The Keyboard Macros dialog appears.
2. Choose the macro from among those listed.
3. Click Modify. The Add/Edit Macro dialog appears.
4. Make your changes.
5. Click OK.

► To remove a macro:

1. Choose Keyboard > Keyboard Macros. The Keyboard Macros dialog appears.
2. Choose the macro from among those listed.
3. Click Remove. The macro is deleted.

Ctrl+Alt+Del Macro

Due to its frequent use, a Ctrl+Alt+Delete macro, used to reboot the target computer, has been preprogrammed. Clicking on the

Ctrl+Alt+Delete button  in the toolbar sends this key sequence to the server or to the KVM switch to which you are currently connected.

In contrast, if you were to physically press the Ctrl+Alt+Del keys, the command would first be intercepted by your own PC due to the structure of the Windows operating system, instead of sending the key sequence to the target server as intended.

Common Hot Key Exceptions for MPC

The following common hot key combinations are *not* sent to the target system:

Hot Key Combination	Description
Ctrl+Alt+Delete	Reboots the computer. The sequence is sent to the local system and the Windows Security (Task Manager, Shutdown, and so on) dialog is displayed.
Ctrl+Left Alt+M	Brings up the shortcut menu (on page 90).
Print Scrn	Treated locally and copies the page to the clipboard.

Following are limitations to specific keyboards and hot key combinations:

Hot Key Combination	Description
Alt Gr	<p>Because of a limitation in the Java Runtime Environment (JRE), Fedora, Linux, and Solaris clients receive an invalid response from Alt Gr on United Kingdom and US International language keyboards.</p> <p>Fedora, Linux, and Solaris do not pick up events for the Alt Gr key combination for Java 1.5. Java 1.6 appears to improve on this, although the keyPressed and keyReleased events for Alt Gr still identify it as an “unknown key code”.</p> <p>Further, a key pressed in combination with Alt Gr (such as on the UK keyboard Alt Gr-4, which is the Euro symbol), will only generate a keyTyped followed by a keyReleased event for that value without a keyPressed event. Java 1.6 improves upon this by filling in the keyPressed event as well.</p> <hr/> <p><i>Note: The KX II does not support Java 1.4.2.</i></p>
Alt+SysRq+[key]	<p>Since the SysRq keyboard stroke is used by some operating systems as a print shortcut, the Alt + SysRq + [key] combination is supported only as a macro when using DKX with RRC and MPC to a Linux target.</p>

Common Hot Key Combinations for RRC

The following common hot key combinations are *not* sent to the target system:

Hot Key Combination	Description
Ctrl+Alt+Delete	Reboots the computer. The sequence is sent to the local system and the Windows Security (Task Manager, Shutdown, and so on) dialog is displayed.
Ctrl+Num Lock	This toggles the state of the Num Lock light if the Num Lock state on the local system is not the same as the target system.
Ctrl+Caps Lock	This toggles the state of the Caps Lock light if the Caps Lock state of the local system is not the same as the target system.

Hot Key Combination	Description
Ctrl+Scroll Lock	This toggles the state of the Scroll Lock light if the Scroll Lock state of the local system is not the same as the target system.
Ctrl+Left Alt+M	Brings up the shortcut menu (on page 90).
Print Scrn	Treated locally and copies the page to the clipboard.

Following are limitations to specific keyboards and hot key combinations:

Hot Key Combination	Description
Alt+SysRq+[key]	Since the SysRq keyboard stroke is used by some operating systems as a print shortcut, the Alt + SysRq + [key] combination is supported only as a macro when using DKX with RRC and MPC to a Linux target.

Windows Key in MPC

When running MPC on a Windows JRE 1.4.2_x platform, if you press the Windows key  to display the Start menu, the Start menu will only appear on the client machine. The key is not sent to the target device.

Note: The KX II does not support Java 1.4.2.

When running MPC on a Windows JRE 1.5.0_x platform, if you press the Windows key, the Start menu appears on both the client and the target devices. Use your mouse to manually close the Start menu if you do not want to use.

Note that if you do not close the target device's Start menu properly, any key that you touch on your keyboard (that has a Windows key combination function) will send that command to the target device. For example, if you press E, the target device will open a new Explorer window. If you press D, all target windows will be minimized so you can view the desktop. To close the Start menu on the target device, click the Start button or click off of the Start menu.

Keyboard Type

Specifying a Keyboard Type in MPC

MPC will not autodetect the type of keyboard you use, so you must specify your keyboard type to ensure accurate keyboard mapping.

► **To specify a keyboard type:**

1. Choose Tools > Options. The Options dialog will appear.
2. Click the Keyboard Type drop-down and select your keyboard type from the list.
 - US/International
 - French (France)
 - German (Germany)
 - Japanese
 - United Kingdom
 - Korean (Korea)
 - Belgian (Belgium)
 - Norwegian (Norway)
 - Danish (Denmark)
 - Swedish (Sweden)
 - German (Switzerland)
 - Hungarian (Hungary)
 - Spanish (Spain)
 - Italian (Italy)
 - Slovenian

3. Click OK.

Keyboard Limitations

Japanese Kanji Keyboards

For Kanji keyboards, when using DCIM-USBs and MPC, the remote client cannot enter EISU mode by pressing the Caps Lock key (key#30). Local port access is not affected. You can access the DCIM-USBs using RRC or using the keyboard macro Shift + Caps Lock in MPC.

Slovenian Keyboards

The < key does not work on Slovenian keyboards due to a JRE limitation.

Language Configuration on Linux

Because the Sun JRE on Linux has problems generating the correct Key Events for foreign-language keyboards configured using System Preferences, Raritan recommends that you configure foreign keyboards using the methods described in the following table.

Language	Configuration method
US Intl	Default
French	Keyboard Indicator
German	System Settings (Control Center)
Japanese	System Settings (Control Center)
UK	System Settings (Control Center)
Korean	System Settings (Control Center)
Belgian	Keyboard Indicator
Norwegian	Keyboard Indicator
Danish	Keyboard Indicator
Swedish	Keyboard Indicator
Hungarian	System Settings (Control Center)
Spanish	System Settings (Control Center)
Italian	System Settings (Control Center)
Slovenian	System Settings (Control Center)

Note: The Keyboard Indicator should be used on Linux systems using Gnome as a desktop environment.

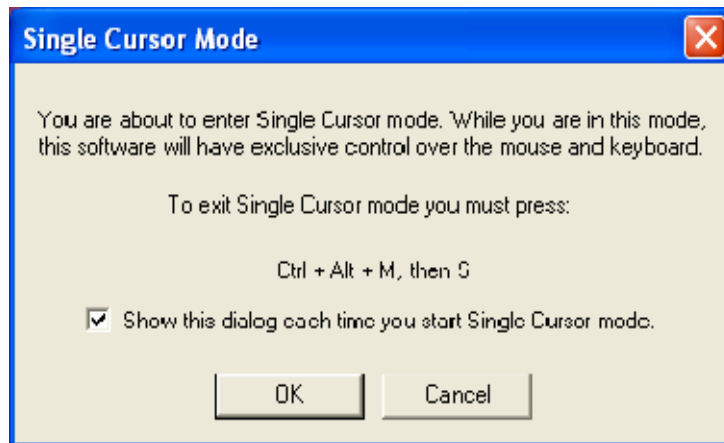

Mouse Options

Single Cursor Mode/Dual Cursor Mode

When remotely viewing a target server that uses a mouse, you will see two mouse cursors on the remote desktop. When your mouse pointer lies within the remote desktop area, mouse movements and clicks are directly transmitted to the connected target server. The pointer, generated by the operating system, slightly leads the target server's mouse pointer during movement. This is a result of digital delay.

On fast LAN connections, you may want to disable the mouse pointer and view only the target server's pointer. To toggle between these two modes, choose Single/Double Cursor on the shortcut menu.

Alternatively, click the Single Mouse Pointer icon  in the toolbar or choose Mouse > Single Cursor Mode.

When in Dual Cursor mode, press Ctrl+Left Alt+M and execute the Synchronize Mouse shortcut to force realignment of the mouse cursors. If the mouse cursors still remain out of sync, click the Auto-Sense Video

Settings button  on the toolbar.

Note: When in Dual Cursor mode, if the dual mouse cursors are synchronized but left idle for five minutes or longer, the target mouse pointer will automatically align itself with the upper left corner of the target window. Execute the Synchronize Mouse command to ensure local and target mouse pointer alignment.

Single Mouse Cursor mode for Apple Mac target servers is supported for MPC. Select Single Mouse Cursor on the Mouse menu in MPC to enter this mode. While in this mode, the cursor will remain in the video window for the Mac Server. To exit, open the shortcut menu and press S on the keyboard.

Mouse Synchronization Options

In addition to synchronizing mouse cursors or toggling between single and dual cursor mode, the Mouse menu provides three options for syncing cursors when in dual cursor mode:

Menu option	Description
Absolute	When connected to selected Dominion devices and targets with USB ports, the application will use absolute coordinates to keep the cursors in sync. See Absolute Mouse Mode for more information.
Intelligent	Under certain conditions, the application can detect the target mouse settings and synchronize the mouse cursors accordingly, accelerating the mouse on the target device. See Intelligent Mouse Mode (on page 18) for more details.
Standard	This is the standard mouse synchronization algorithm. See Standard Mouse Mode (on page 17) for more information.

Note: The Intelligent and Standard Mouse modes are available to all targets. Absolute Mouse mode are only available to Mac and Windows USB targets.

Automatic Mouse Synchronization

For Generation 1, devices When in Dual Cursor mode, the system will automatically align the mouse cursors when the cursor is inactive for 15 seconds. Enable this feature by clicking the Synchronize Mouse icon  in the toolbar or selecting Tools > Options and selecting the "Auto-Sync mouse in two-cursor mode" checkbox.

Automatic Mouse Synchronization is available for Generation 2 devices when:

- A new connection is established
- Auto-sense is enabled
- Color calibration is enabled

Enable this feature in Generation 2 devices by clicking the Synchronize Mouse icon  in the toolbar or selecting Mouse > Synchronize Mouse.

Absolute Mouse Mode

In this mode, absolute coordinates are used to keep the client and target cursors in sync, even when the target mouse is set to a different acceleration or speed. This mode is supported on servers with USB ports.

► **To enter absolute mouse mode:**

- Choose Mouse > Absolute.

Note: The absolute mouse setting requires a USB target system and is the recommended mouse setting for KX II-101.

Note: Absolute Mouse Synchronization is available for use with the virtual media-enabled USB CIM (D2CIM-VUSB and D2CIM-DVUSB) only.

Intelligent Mouse Mode

In Intelligent Mouse mode, the device can detect the target mouse settings and synchronize the mouse cursors accordingly, allowing mouse acceleration on the target. In this mode, the mouse cursor does a “dance” in the top left corner of the screen and calculates the acceleration. For this mode to work properly, certain conditions must be met.

► To enter intelligent mouse mode:

- Choose Mouse > Intelligent.

Intelligent Mouse Synchronization Conditions

The Intelligent Mouse Synchronization command, available on the Mouse menu, automatically synchronizes mouse cursors during moments of inactivity. For this to work properly, however, the following conditions must be met:

- The active desktop should be disabled on the target.
- No windows should appear in the top left corner of the target page.
- There should not be an animated background in the top left corner of the target page.
- The target mouse cursor shape should be normal and not animated.
- The target mouse speeds should not be set to very slow or very high values.
- Advanced mouse properties such as “Enhanced pointer precision” or “Snap mouse to default button in dialogs” should be disabled.
- Choose “Best Possible Video Mode” in the Video Settings window.
- The edges of the target video should be clearly visible (that is, a black border should be visible between the target desktop and the remote KVM console window when you scroll to an edge of the target video image).
- When using the intelligent mouse synchronization function, having a file icon or folder icon located in the upper left corner of your desktop may cause the function not to work properly. To be sure to avoid any problems with this function, Raritan recommends you do not have file icons or folder icons in the upper left corner of your desktop.

After autosensing the target video, manually initiate mouse synchronization by clicking the Synchronize Mouse button on the toolbar. This also applies when the resolution of the target changes if the mouse cursors start to desync from each other.

If intelligent mouse synchronization fails, this mode will revert to standard mouse synchronization behavior.

Please note that mouse configurations will vary on different target operating systems. Consult your OS guidelines for further details. Also note that intelligent mouse synchronization does not work with UNIX targets.

Standard Mouse Mode

Standard Mouse mode uses a standard mouse synchronization algorithm using relative mouse positions. Standard Mouse mode requires that mouse acceleration is disabled and other mouse parameters are set correctly in order for the client and server mouse to stay synchronized. Standard Mouse mode is the default.

► **To enter standard mouse mode:**

- Choose Mouse > Standard.

Connection and Video Properties

Dynamic video compression algorithms maintain KVM console usability under varying bandwidth constraints. The device optimizes KVM output not only for LAN use but also for WAN and dial-up use. These devices can also control color depth and limit video output, offering an optimal balance between video quality and system responsiveness for any bandwidth constraint.

The parameters discussed in this section can be optimized in the Connection Properties dialog and Video Settings dialog.

MPC Connection Properties - Generation 1 Devices

► **To adjust connection properties:**

1. Choose Connection > Properties or click the Connection Properties button  in the toolbar. Update the settings in the Compression tab.

2. Set the Connection Speed.

Use this setting to manually adjust the connection speed to accommodate bandwidth constraints. Devices can automatically detect available bandwidth and not limit bandwidth use. However, you can also adjust this usage according to your needs. Depending on the Raritan device in use, different options may be available:

- Auto Detect
- 1G Ethernet
- 100mb Ethernet
- 10mb Ethernet
- 1.5mb (Max DSL/T1)
- 1mb (Fast DSL/T1)
- 512 kb (Medium DSL/T1)

- 384 kb (Slow DSL/T1)
- 256 kb (Cable)
- 128 kb (Dual ISDN)
- 56 kb (ISP Modem)
- 33 kb (Fast Modem)
- 24 kb (Slow Modem)

3. Set the Color Depth.

Devices can dynamically adapt the color depth transmitted to remote users in order to maximize usability in all bandwidths. Select from among the options in the drop-down list. Depending on the Raritan device in use, different options may be available:

- 15-bit RGB Color
- 8-bit RGB Color
- 4-bit Color
- 4-bit Gray
- 3-bit Gray
- 2-bit Gray
- Black and White

Important: For most administrative tasks (server monitoring, reconfiguring, and so forth), administrators do not require the full 24-bit or 32-bit color spectrum made available by most video graphics cards. Attempting to transmit such high color depths wastes network bandwidth.

4. Selecting the Internet Flow Control checkbox ensures that packets transmitted by the device are received and reconstructed by the client application in the correct order. This is useful when using a device over an unpredictable public WAN (particularly in international scenarios).
5. Use the slider to select the desired level of video Smoothing (15-bit mode only). The level determines how aggressively to blend page regions with small color variation into a single, smooth color. Smoothing improves the appearance of the target video by reducing the video noise that is displayed.
6. Select "Frames per second". This setting instructs MPC on how often to redraw the video display of the target. This only affects the client display behavior and has no bearing on the data rate of the video being sent to the client. Setting this option higher makes the video appear smoother but also requires more processing power.
7. Click OK to create the connection profile.

MPC Connection Properties - Generation 2 Devices

► **To adjust connection properties:**

1. Choose Connection > Properties or click the Connection Properties button  in the toolbar. Update the settings in the Compression tab.
2. Set the Connection Speed.

Use this setting to manually adjust the connection speed to accommodate bandwidth constraints. Devices can automatically detect available bandwidth and not limit bandwidth use. However, you can also adjust this usage according to your needs. Depending on the Raritan device in use, different options may be available:

- Auto Detect
- 1G Ethernet
- 100mb Ethernet
- 10mb Ethernet
- 1.5mb (Max DSL/T1)
- 1mb (Fast DSL/T1)
- 512 kb (Medium DSL/T1)
- 384 kb (Slow DSL/T1)
- 256 kb (Cable)
- 128 kb (Dual ISDN)
- 56 kb (ISP Modem)
- 33 kb (Fast Modem)
- 24 kb (Slow Modem)

Note: KX II-101 does not support 1G Ethernet.

3. Set the Color Depth.

Devices can dynamically adapt the color depth transmitted to remote users in order to maximize usability in all bandwidths. Select from among the options in the drop-down list. Depending on the Raritan device in use, different options may be available:

- 15-bit RGB Color
- 8-bit RGB Color
- 4-bit Color
- 4-bit Gray
- 3-bit Gray

- 2-bit Gray
- Black and White

Important: For most administrative tasks (server monitoring, reconfiguring, and so forth), administrators do not require the full 24-bit or 32-bit color spectrum made available by most video graphics cards. Attempting to transmit such high color depths wastes network bandwidth.

4. Use the slider to select the desired level of video Smoothing (15-bit mode only). The level determines how aggressively to blend page regions with small color variation into a single, smooth color. Smoothing improves the appearance of the target video by reducing the video noise that is displayed.
5. Click OK to create the connection profile.

RRC Connection Properties

► **To adjust connection properties:**

1. Choose Connection > Properties or click the Connection Properties button  in the toolbar. Update the settings in the Compression tab.

2. Set the Connection Speed.

Use this setting to manually adjust the connection speed to accommodate bandwidth constraints. Devices can automatically detect available bandwidth and not limit bandwidth use. However, you can also adjust this usage according to your needs. Depending on the Raritan device in use, different options may be available:

- Auto Detect
- 1G Ethernet
- 100mb Ethernet
- 10mb Ethernet
- 1.5mb (Max DSL/T1)
- 1mb (Fast DSL/T1)
- 512 kb (Medium DSL/T1)
- 384 kb (Slow DSL/T1)

- 256 kb (Cable)
 - 128 kb (Dual ISDN)
 - 56 kb (ISP Modem)
 - 33 kb (Fast Modem)
 - 24 kb (Slow Modem)
3. Set the Color Depth.
- Devices can dynamically adapt the color depth transmitted to remote users in order to maximize usability in all bandwidths. Select from among the options in the drop-down list. Depending on the Raritan device in use, different options may be available:
- 15-bit RGB Color
 - 8-bit RGB Color
 - 4-bit Color
 - 4-bit Gray
 - 3-bit Gray
 - 2-bit Gray
 - Black and White

Important: For most administrative tasks (server monitoring, reconfiguring, and so forth), administrators do not require the full 24-bit or 32-bit color spectrum made available by most video graphics cards. Attempting to transmit such high color depths wastes network bandwidth.

4. Select Progressive Update to increase the usability in constrained bandwidth environments. When Progressive Update is enabled, the device initially sends an image of the remote desktop at lower color depths. Higher color depth images are provided as the bandwidth allows.

Note: When Color Depth is set to Auto Select Color (default), Progressive Update is automatic. The device will enable/disable Progressive Update as required, disabling it for fast connections and enabling it for slow connections.

5. Selecting the Internet Flow Control checkbox ensures that packets transmitted by the device are received and reconstructed by the client application in the correct order. This is useful when using a device over an unpredictable public WAN (particularly in international scenarios).

6. Use the slider to select the desired level of video Smoothing (15-bit mode only). The level determines how aggressively to blend page regions with small color variation into a single, smooth color. Smoothing improves the appearance of the target video by reducing the video noise that is displayed.
7. Click OK to create the connection profile.

Video Settings

Video Settings - Generation 1 Devices

Following are instructions on configuring video settings for Generation 1 devices. These settings can be refreshed using the Color Calibration command by manually forcing a device to autodetect the video settings (on the Video menu, click Auto-sense Video Settings) or by changing the settings in this page. After you change a value, click Apply to test the setting. See **Color Calibration** (on page 119).

► To configure Generation 1 devices:

1. Choose Video > Video Settings or click the Video Settings button

in the toolbar to open the Settings dialog.

2. Adjust the following settings as required:

- a. Noise Filter

Devices can filter out the electrical interference of video output from graphics cards. This feature optimizes picture quality and reduces bandwidth. Higher settings transmit variant pixels only if a large color variation exists in comparison to the neighboring pixels. However, setting the threshold too high can result in the unintentional filtering of desired page changes. Lower settings transmit most pixel changes. Setting this threshold too low can result in higher bandwidth use.

Note: The default Noise Filter is 4. Raritan recommends that you lower this value to 0 (zero). Although higher settings will stop the needless transmission of false color variations, true and intentional small changes to a video image may not be transmitted.

- b. PLL Settings

If the video image looks extremely blurry or unfocused, the PLL settings for clock and phase can be adjusted until a better image appears on the active target server.

Warning: Exercise caution when changing the clock and phase settings since doing so may result in lost or distorted video and you may not be able to return to the previous state. Contact Raritan Technical Support before making any changes.

- Clock - Controls how quickly video pixels are displayed across the video page. Changes made to clock settings cause the video image to stretch or shrink horizontally. Odd number settings are recommended. Under most circumstances this setting should not be changed because the autodetect is usually quite accurate.
 - Phase - Phase values range from 0 to 31 and will wrap around. Stop at the phase value that produces the best video image for the active target server.
 - a. Color Settings - Gain control can be thought of as contrast adjustment. Offset control can be thought of as brightness adjustment.

Select the Link Color Controls checkbox to make all slide adjusters move in unison when any one option is moved.
 - Red Gain - Controls the amplification of the red signal.
 - Red Offset - Controls the bias of the red signal.
 - Green Gain - Controls the amplification of the green signal.
 - Green Offset - Controls the bias of the green signal.
 - Blue Gain - Controls the amplification of the blue signal.
 - Blue Offset - Controls the bias of the blue signal.
3. Select the video sensing mode:
- Best possible video mode - Devices will perform the full Auto Sense process when switching targets or target resolutions. Selecting this option calibrates the video for the best image quality.
 - Quick sense video mode - Selecting this option will cause the device to use a quick video Auto Sense in order to show the target's video sooner. This option is especially useful for entering a target server's BIOS configuration right after a reboot.
4. Click OK to apply the settings and close the dialog. Click Apply to apply the settings without closing the dialog.

Note: Some Sun background screens, such as screens with very dark borders, may not center precisely on certain Sun servers. Use a different background or place a lighter colored icon in the upper left corner of the page.

Video Settings - Generation 2 Devices

► To configure Generation 1 devices:

1. Choose Video > Video Settings or click the Video Settings button

in the toolbar to open the Settings dialog.

2. Adjust the following settings as required:

- a. Noise Filter

Devices can filter out the electrical interference of video output from graphics cards. This feature optimizes picture quality and reduces bandwidth. Higher settings transmit variant pixels only if a large color variation exists in comparison to the neighboring pixels. However, setting the threshold too high can result in the unintentional filtering of desired page changes. Lower settings transmit most pixel changes. Setting this threshold too low can result in higher bandwidth use.

Note: The default Noise Filter is 4. Raritan recommends that you lower this value to 0 (zero). Although higher settings will stop the needless transmission of false color variations, true and intentional small changes to a video image may not be transmitted.

b. PLL Settings

If the video image looks extremely blurry or unfocused, the PLL settings for clock and phase can be adjusted until a better image appears on the active target server.

Warning: Exercise caution when changing the clock and phase settings since doing so may result in lost or distorted video and you may not be able to return to the previous state. Contact Raritan Technical Support before making any changes.

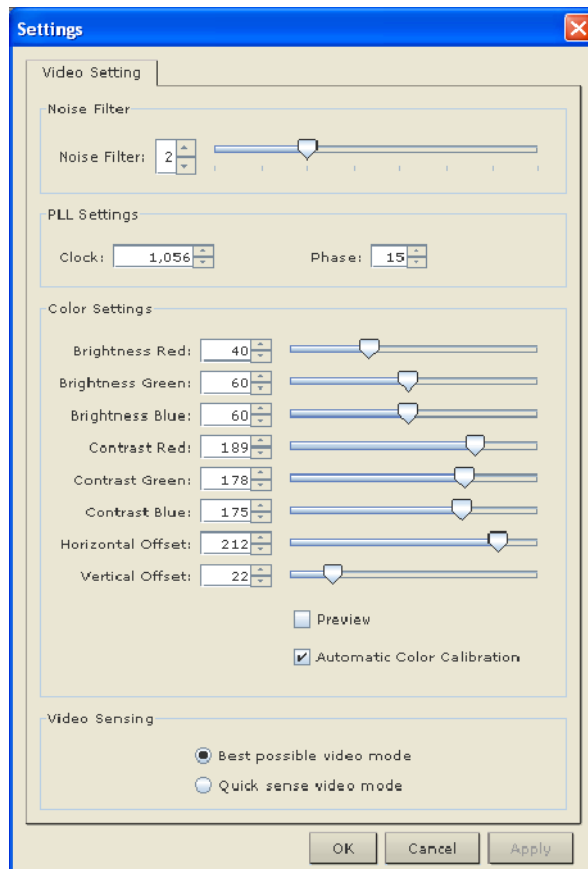

- Clock - Controls how quickly video pixels are displayed across the video page. Changes made to clock settings cause the video image to stretch or shrink horizontally. Odd number settings are recommended. Under most circumstances this setting should not be changed because the autodetect is usually quite accurate.
- Phase - Phase values range from 0 to 31 and will wrap around. Stop at the phase value that produces the best video image for the active target server.

a. Color Settings

These settings control the brightness, contrast, and positioning of the target server display. Select the Link Color Controls checkbox to make all slide adjusters move in unison when any one option is moved.

- Brightness Red - Controls the brightness of the red signal; range is 0 - 127.
- Brightness Green - Controls the brightness of the green signal; range is 0 - 127.
- Brightness Blue - Controls the brightness of the blue signal; range is 0 - 127.
- Contrast Red - Controls the red signal contrast; range is 0 - 255.
- Contrast Green - Controls the green signal contrast; range is 0 - 255.
- Contrast Blue - Controls the blue signal contrast; range is 0 - 255.
- Horizontal Offset - Controls the horizontal positioning of the target server display on your monitor; range is 0 - 512.
- Vertical Offset - Controls the vertical positioning of the target server display on your monitor; range is 0 - 128.

3. To preview the change prior to making the selection, check the Preview checkbox.
4. Check the Automatic Color Calibration checkbox to enable this feature.
5. Select the video sensing mode:
 - Best possible video mode - Devices will perform the full Auto Sense process when switching targets or target resolutions. Selecting this option calibrates the video for the best image quality.
 - Quick sense video mode - Selecting this option will cause the device to use a quick video Auto Sense in order to show the target's video sooner. This option is especially useful for entering a target server's BIOS configuration right after a reboot.
6. Click OK to apply the settings and close the dialog. Click Apply to apply the settings without closing the dialog.

Port Access page sort**► To change the display sort order:**

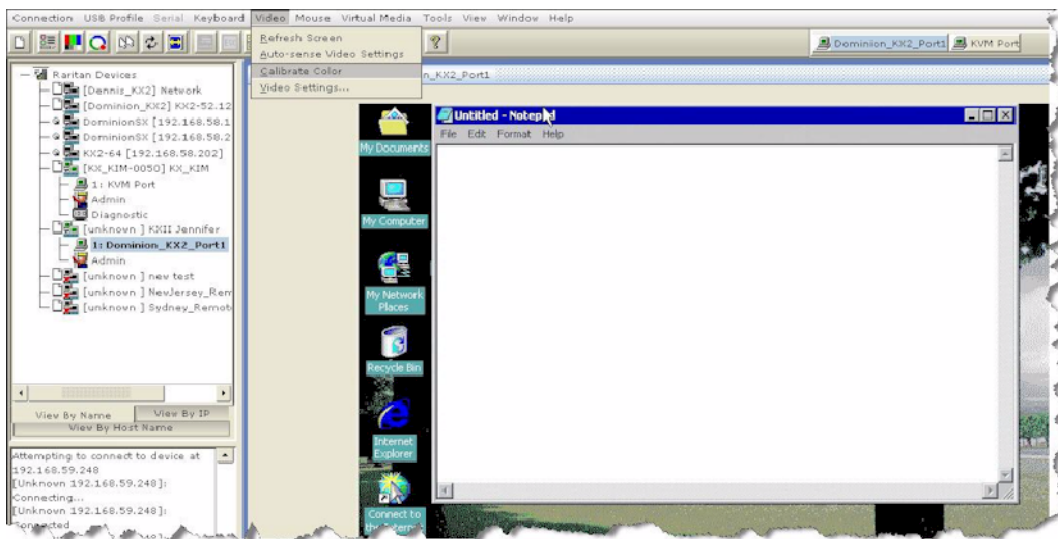

- Click the column heading by which you want to sort. The list of KVM target servers is sorted by that column.

Color Calibration

Use the Color Calibration command if the color levels (hue, brightness, and saturation) of the transmitted video images do not seem accurate. The device color settings remain the same when switching from one target KVM server to another, so you can perform color calibration once to affect all connected target servers.

1. Open a remote KVM connection to any server running a graphical user interface.
2. Ensure that a solid white color covers approximately 15% or more of the target server's desktop.

TIP: Open Microsoft Notepad and maximize the window.

3. On the Video menu, choose Calibrate Color or click the Color Calibration button  on the toolbar. The target device page will update its calibration.

*Tip: You can also specify automatic color calibration using Tools > Options. See **General Options in MPC** (on page 121) for more information.*

Administrative Functions

Although your device provides a remote interface to administrative functions through the device manager, the client provides an interface to frequently-used administrative functions directly from its own interface. When logged into a device as an administrator, you can perform the administrative tasks discussed here.

Note: Most of the commands discussed here are available in both the Tools menu and in the shortcut menu that appears when you right-click the device in the Navigator panel.

Note to MPC Users

MPC users must belong to the Administrator group in order to receive administrative permissions. MPC uses one permission: either Administrator or Normal User. It is only when the user belongs to the Administrator group that they have access to backup, restore, and restart functions. This is true regardless of any device user group settings that may be applied to the user.

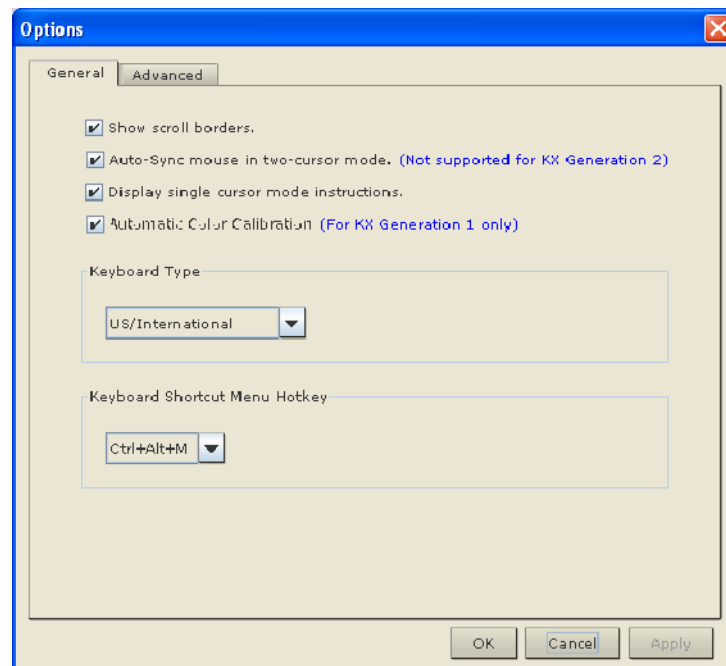

General Options

General Options in MPC

The Options available in the Tools menu provide options that allow you to customize scroll borders, mouse mode settings, single cursor mode, auto color calibration, hot key configuration, keyboard type, broadcast port, and logging.

► To configure the general options in MPC:

1. Choose Tools > Options. The Options dialog appears and displays the General tab by default.

2. Select the "Show scroll borders" checkbox to view the thin scroll borders designating the autoscroll area.
3. Select the "Auto-Sync mouse in two-cursor mode" checkbox to enable automatic mouse synchronization.
4. If you select the "Display single cursor mode instructions" checkbox, the Single Cursor Mode dialog will appear each time Single Cursor is enabled in the application. See **Mouse Options** (on page 103) for more information.
5. Select the Automatic Color Calibration checkbox to enable automatic color calibration. This option is available for KX generation 1 (G1) only.

6. Select the Keyboard Type from the drop-down list (depending on the Raritan device in use, different options may be available):
 - US/International
 - French (France)
 - German (Germany)
 - Japanese
 - United Kingdom
 - Korean (Korea)
 - Belgian (Belgium)
 - Norwegian (Norway)
 - Danish (Denmark)
 - Swedish (Sweden)
 - German (Switzerland)
 - Hungarian (Hungary)
 - Spanish (Spain)
 - Italian (Italy)
 - Slovenian
7. From the Keyboard Shortcut Menu HotKey drop-down, select the key combination you would like to use to invoke the **Shortcut Menu** (on page 90).

8. For advanced options, open the Advanced tab.

9. From the KVM Switch OSUI Hot Key section, select the hot key to use when switching between target server displays.
10. For the Broadcast Port, type the broadcast port number in the Port field if you want to use a port other than 5000.
11. Select the Enable IPv6 Networking checkbox for IPv6 to enable IPv4 and IPv6 dual-stack operation.

Note: KSX II and KX II-101 devices are not IPv6 enabled, so this section will not apply to those devices.

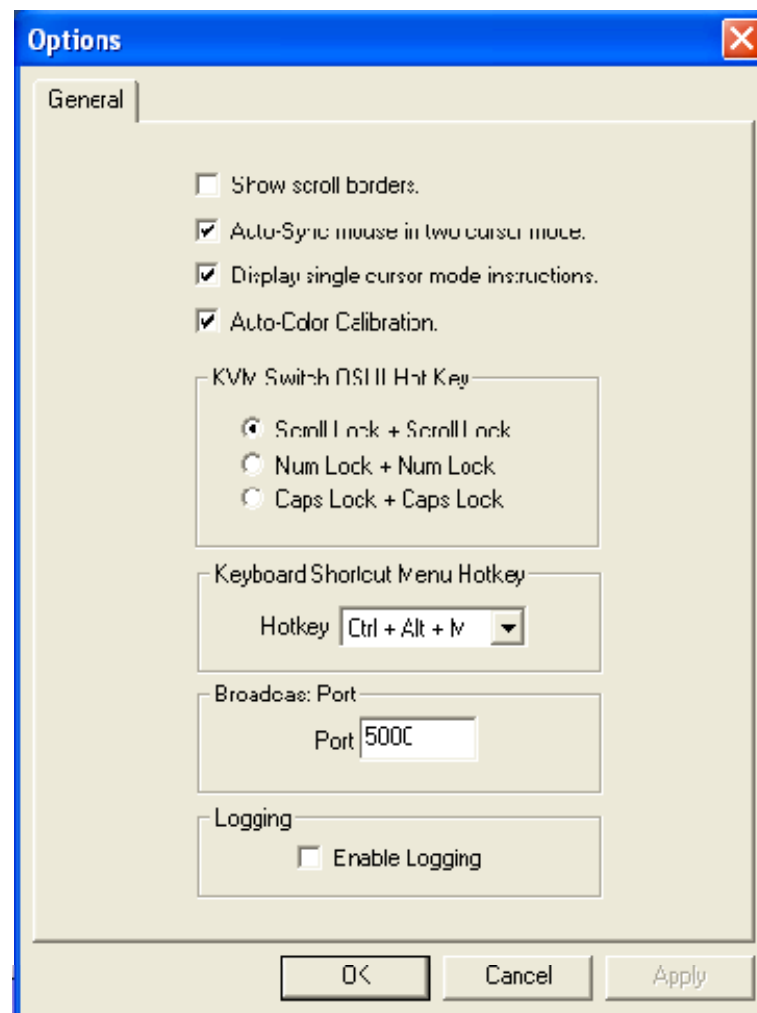

12. Select the Enable Logging checkbox only if directed to by Technical Support. This option creates a log file in your home directory.
13. Click OK when finished. Click Apply any time while making selections to apply it.

General Options in RRC

The Options available in the Tools menu provide options that allow you to customize scroll borders, mouse mode settings, single cursor mode, auto color calibration, hot key configuration, keyboard type, broadcast port, and logging.

► **To configure the general options in RRC:**

1. In RRC, choose Tools > Options to open the Options dialog.

2. Select the "Show scroll borders" checkbox to view the thin scroll borders that show the Auto-Scroll area.
3. Select the "Auto-Sync mouse in two cursor mode" checkbox to enable Automatic Mouse Synchronization.

4. If you select the "Display single cursor mode instructions" checkbox the Single Cursor Mode dialog will open each time Single Cursor is enabled in the application (see **Mouse Options** (on page 103) for more information).
5. Select Auto-Color Calibration to enable it.
6. In the KVM Switch OSUI Hot Key panel, select the radio button next to the hot key combination you would like to use.
7. In the Keyboard Type panel, click on the drop-down arrow and click on your keyboard choice.
8. In the Broadcast Port panel, type the broadcast port number in the Port field.
9. Click OK when finished. Click Apply any time during your selection to apply an option you have chosen.

Upgrading Device Firmware

► **To update a device's firmware:**

1. Connect to the device by highlighting the device's icon in the Navigator.
2. Click Tools > Update > Update Device to perform firmware upgrades.
3. You will be prompted to locate a Raritan firmware distribution file (*.RFP format), which can be found on the Raritan website (www.raritan.com) on the Firmware Upgrades page.

Ensure that you read all instructions included in Firmware Upgrade Guide carefully before upgrading a device.

Note: Copy the firmware update file on the Raritan website to a local machine before uploading. Do not load the file from a network drive.

Changing a Password

► **To update your password**

1. Connect to a target by selecting it in the Navigator.

2. Highlight the target's icon in the Navigator and then choose Tools > Update > User Password. The Change Password dialog appears.

A screenshot of a 'Change Password' dialog box. The dialog has a title bar with the text 'Change Password' and a close button (X). Inside the dialog, there is a section labeled 'Info' which contains three text input fields: 'Old Password' (containing '*****'), 'New Password', and 'Confirm New Password'. At the bottom of the dialog are two buttons: 'OK' and 'Cancel'.

3. Type your current password in the Old Password field.
4. Type the new password in the New Password field.
5. Retype the password in the Confirm New Password field.
6. When finished, click OK.

Restarting a Device

► **To restart a device:**

1. Select the device in the Navigator.
2. On the Tools menu, choose Restart Device.

Backup and Restore Functions

In addition to using backup and restore for business continuity purposes, you can use this feature as a time-saving mechanism. For instance, you can quickly provide access from another Dominion device to your team by backing up the user configuration settings from the device in use and restoring those configurations to the new Dominion device.

Backup and Restore (Dominion KX II only)

► **To backup the entire system (both user and device configuration):**

1. Choose Tools > Backup All. The Backup All dialog appears.

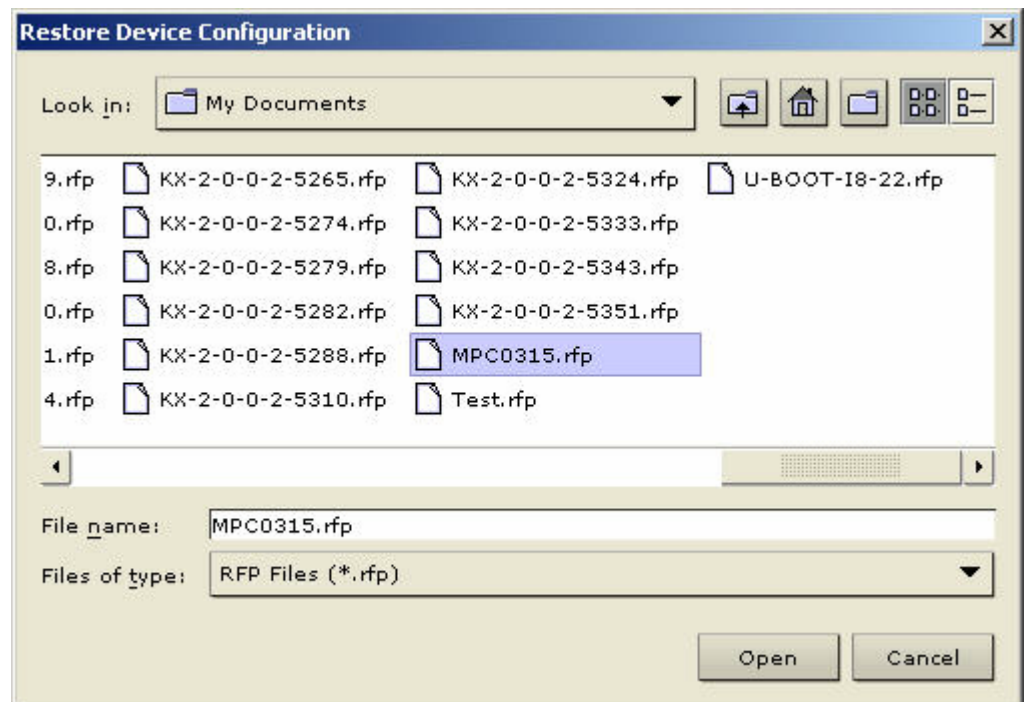

2. Navigate to the desired directory and give the backup file a name. (Backup files have an extension of .rfp).
3. Click Save. A message is displayed confirming the successful backup.
4. Click OK.

Note: Backups are always complete system backups. Restores can be complete or partial depending on your selection.

► **To restore:**

1. Choose Tools > Restore Configuration. The Restore Device Configuration dialog appears.

2. Navigate to the appropriate directory and select the backup file.
3. Click Open. The Restore Packages dialog appears.

4. Select the type of restore you want to run:
 - Full Restore: A complete restore of the entire system; generally used for traditional backup and restore purposes.
 - Protected Restore: Everything is restored except device-specific information such as serial number, MAC Address, IP Address, name, port names, etc. With this option, you can setup one Dominion device and copy the configuration to multiple Dominion devices.
 - Custom Restore: With this option, the following options are available. Check the appropriate checkboxes:
 - User and Group Restore: This option includes only user and group information. Use this option to quickly setup users on a different Dominion device.
 - Device Settings Restore: This option includes only device settings. Use this option to quickly copy the device information.
1. Click OK.

Backing Up and Restoring a Device Configuration

► To back up a device:

1. Download the device configuration to your local computer by selecting the device in the Navigator.
2. Click Tools > Save Device Configuration.

► To restore a device configuration:

1. Upload the archived device configuration by selecting the device in the Navigator.
2. Click Tools > Restore Device Configuration.

Note that device configuration is specific to a particular device and should not be restored to another device.

Backing Up and Restoring a User Configuration

► To back up a device's user configuration:

1. Select the device in the Navigator.
2. Click Tools > Save User Configuration.

► To restore a user configuration:

1. Upload a device's archived user configuration by selecting the device in the Navigator.
2. Click Tools > Restore User Configuration.

Note: Use these commands to easily transfer user and group information from one device to another.

Log Files

Activity Log

► **To download a detailed activity log for review or troubleshooting:**

1. Select the device in the Navigator.
2. On the Tools menu, choose Save Activity Log.

Diagnostic Log (excluding Dominion KX II)

► **To download a detailed diagnostic log for reporting or analysis:**

1. Select the device in the Navigator.
2. On the Tools menu, choose Save Diagnostic Log.

Broadcast Port

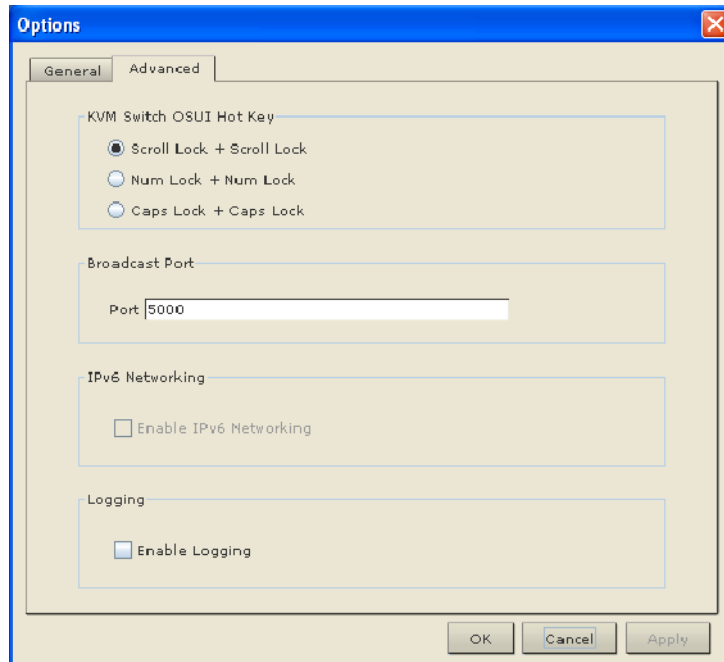

By default, all Raritan devices send data through Port 5000. This network traffic includes the autodiscovery broadcast. In the case of conflicts or to deal with firewall issues, you may want to use a different broadcast port.

MPC Broadcast Port

► **To change the autodiscovery port from the default broadcast port of 5000:**

1. Select the device in the Navigator.
2. Choose Tools > Options. The Options dialog appears.
3. On the Advanced tab, type the new port number in the Port field of the Broadcast Port section and then click OK.

Note: If you want the application to autodiscover Raritan devices on the new broadcast port you entered in the Options dialog, you must configure all Raritan devices to use the new port number.

RRC Broadcast Port

- **To change the autodiscovery port from the default broadcast port of 5000:**
 1. Select the device in the Navigator.
 2. On the Tools menu, choose Options. The Options dialog appears.
 3. In the Broadcast Port field, type the new port number in the Port field and then click OK.

Note: If you want the application to autodiscover Raritan devices on the new broadcast port you entered in the Options window, you must configure all Raritan devices to use the new port number.

The image shows a Windows-style dialog box titled "Options" with a close button (X) in the top right corner. The "General" tab is selected. The dialog contains several settings:

- ☐ Show scroll borders.
- ☒ Auto-Sync mouse in two cursor mode.
- ☒ Display single cursor mode instructions.
- ☒ Auto-Color Calibration.
- KVM Switch OSUI Hot Key**
 - ☒ Scroll Lock + Scroll Lock
 - ☐ Num Lock + Num Lock
 - ☐ Caps Lock + Caps Lock
- Keyboard Shortcut Menu Hotkey**
 - Hotkey:
- Broadcast Port**
 - Port:
- Logging**
 - ☐ Enable Logging

At the bottom of the dialog are three buttons: "OK", "Cancel", and "Apply".

Remote Power Management

AC power to associated targets can be managed when used with a properly configured Raritan Remote Power Control Strip (RPC strip). Three options are available when performing remote target power management:

- Power On
- Power Off
- Cycle Power

► To change the power status of a target:

1. Select the device in the Navigator.
2. On the Tools menu, choose Power On, Power Off, or Cycle Power.

Import/Export Keyboard Macro Definitions

The functions contained in this section describe how to exchange keyboard macro definitions between users using import and export functions. The primary purpose of this function is to exchange data between copies of the client application.

Import/Export MPC Keyboard Macros

► To import MPC macros:

1. Choose Tools > Import Macros to open the Import Macros dialog. By default, the macro will exist on the desktop.
2. Click on the macro file and click Open to import the macro.
 - a. If too many macros are found in the file, an error message will be displayed and the import will terminate once OK is selected.
 - b. If the import fails, an error dialog will appear and will display a message regarding why the import failed. Select OK to continue the import without importing the macros that cannot be imported.
3. Select the macros to be imported by checking their corresponding checkbox or using the Select All or Deselect All options.
4. Click OK and the import will begin.
 - a. If a duplicate macro is found, the Import Macros dialog will appear. Do one of the following:

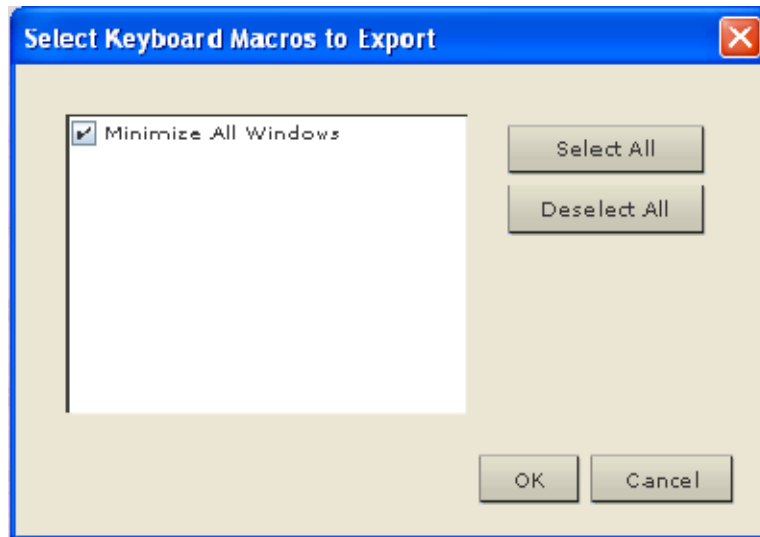

- Click Yes to replace the existing macro with the imported version.
 - Click Yes to All to replace the currently selected and any other duplicate macros that are found.
 - Click No to keep the original macro and proceed to the next macro
 - Click No to All keep the original macro and proceed to the next macro. Any other duplicates that are found will be skipped as well.
 - Click Cancel to stop the import.
 - Alternatively, click Rename to rename the macro and import it. If Rename is selected, the Rename Macro dialog will appear. Enter a new name for the macro in the field and click OK. The dialog will close and the process will proceed. If the name that is entered is a duplicate of a macro, an alert will appear and you will be required to enter another name for the macro.
- b. If during the import process the number of allowed, imported macros is exceeded, a dialog will appear. Click OK to attempt to continue importing macros or click Cancel to stop the import process.

The macros will then be imported.

If a macro is imported that contains a hot key that already exists, the hot key for the imported macro will be discarded.

► **To export MPC macros:**

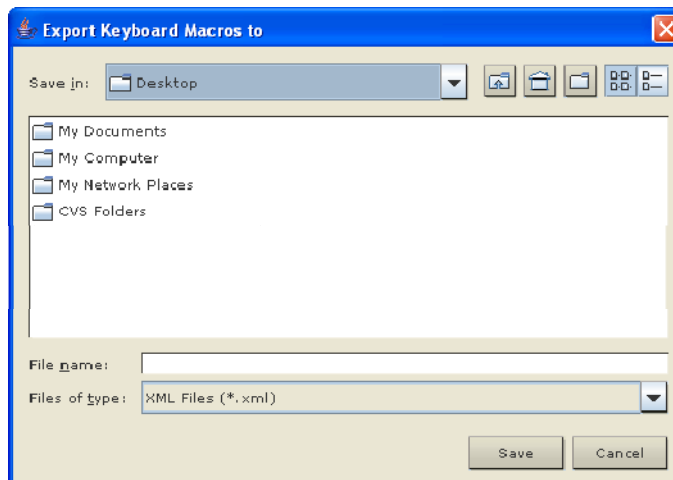

1. Choose Tools > Export Macros to open the Select Keyboard Macros to Export dialog.

2. Select the macros to be exported by checking their corresponding checkbox or using the Select All or Deselect All options.
3. Click OK. The selected macro file(s) will be moved to your desktop (by default).

A dialog from which you can locate and select the macro file will then appear. By default, the macro will exist on your desktop.

4. Locate the macro file, click it to select it and then click Save. If the macro already exists, you will receive an alert message. Select Yes to overwrite the existing macro or No to close the alert without overwriting the macro.

Import/Export RRC Keyboard Macros

► To export RRC macros:

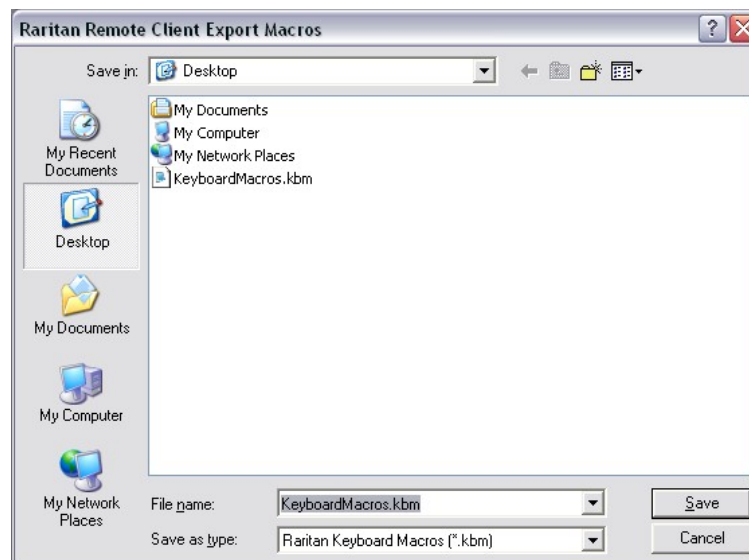

1. Choose Tools > Export Macros to open the Export Macros dialog.

2. Select the macros to be exported by checking their corresponding checkbox or using the Select All or Unselect All options.
3. Click OK. The selected macro file(s) will be moved to your desktop (by default).

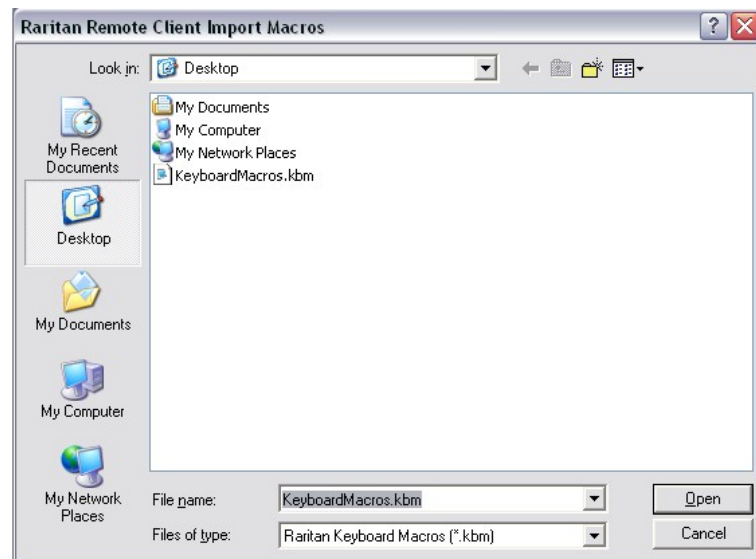

A select dialog from which you can locate and select the macro file will then appear. By default, the macro will exist on your desktop.

4. Locate the macro file, click on it to select it and then click Save. If the macro already exists, you will receive an alert message. Select Yes to overwrite the existing macro or No to close the alert without overwriting the macro.

► **To import RRC macros:**

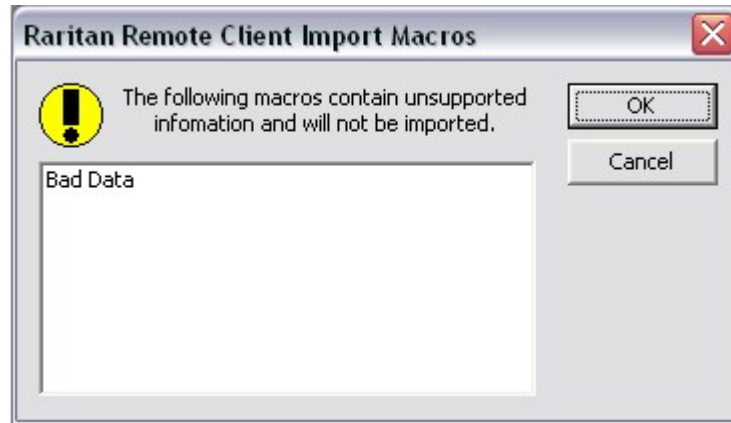

1. Choose Tools > Import Macros to open the Import Macros dialog. By default, the macro will exist on the desktop.

2. Click on the macro file and click Open to import the macro.
 - a. If too many macros are found in the file, an error message will be displayed and the import will terminate once OK is selected.

- b. If the import fails, an error dialog will open and will display a message regarding why the import failed. Select OK to continue the import without importing the macros that cannot be imported.

3. Select the macros to be imported by checking their corresponding checkbox or using the Select All or Unselect All options.
4. Click OK and the import will begin.

- a. If a duplicate macro is found, a dialog will appear. Do one of the following:

- Click Yes to replace the existing macro with the imported version.
- Click Yes to All to replace the currently selected and any other duplicate macros that are found.
- Click No to keep the original macro and proceed to the next macro
- Click No to All keep the original macro and proceed to the next macro. Any other duplicates that are found will be skipped as well.
- Click Cancel to stop the import.

- Alternatively, click Rename to rename the macro and import it. If Rename is selected, Raritan Remote Client Rename Macro dialog will open. Enter a new name for the macro in the field and click OK. The dialog will close and the process will proceed. If the name that is entered is a duplicate of a macro, an alert will appear and you will be required to enter another name for the macro.

- b. If during the import process the number of allowed, imported macros is exceeded, a message will appear. Click OK to attempt to continue importing macros or click Cancel to stop the import process.

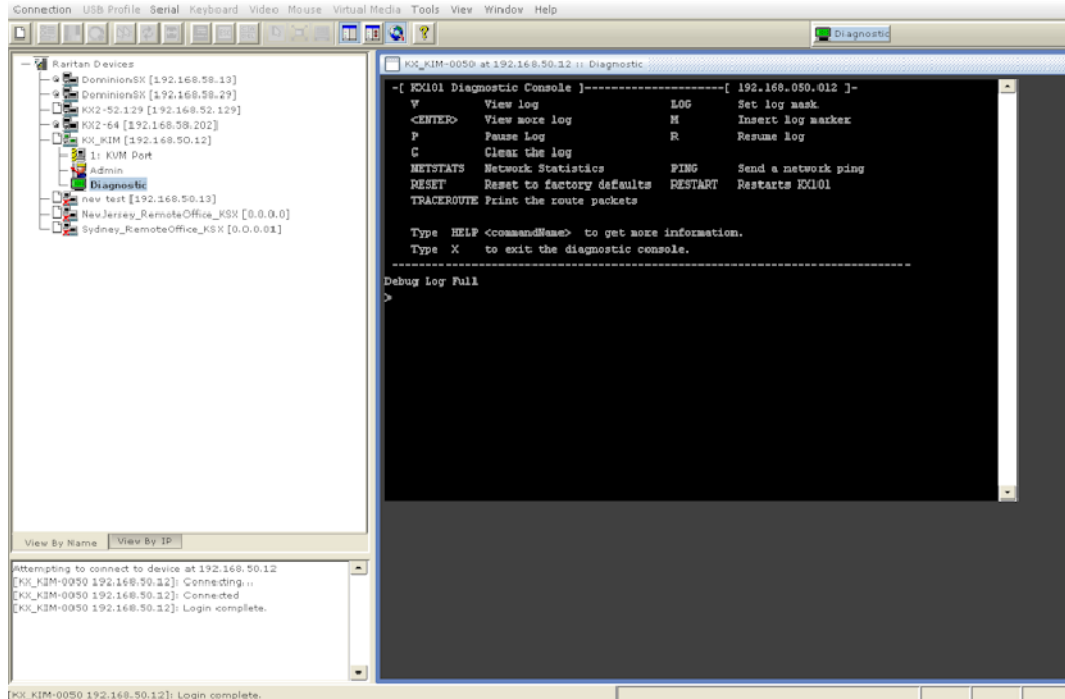

The macros will then be imported. If a macro is imported that contains a hot key that already exists, the hot key for the imported macro will be discarded.

Accessing the MPC Diagnostic Interface (excluding Dominion KX II)

► To access a device's diagnostic console:

- In the Navigator, scroll through the list of the targets associated with the device and then double-click the Diagnostic icon at the bottom of the target list.

Chapter 4 Virtual Media

In This Chapter

Overview	142
Prerequisites for Using Virtual Media	144
File Server Setup (File Server ISO Images Only)	145
Using Virtual Media	146
Connecting to Virtual Media	148
Disconnecting Virtual Media	151

Overview

Virtual media extends KVM capabilities by enabling KVM target servers to remotely access media from a client PC and network file servers. With this feature, media mounted on a client PC and network file servers is essentially "mounted virtually" by the target server. The target server can then read from and written to that media as if it were physically connected to the target server itself.

Virtual media can include internal and USB-mounted CD and DVD drives, USB mass storage devices, PC hard drives, and ISO images (disk images).

Note: ISO9660 is the standard supported by Raritan. However, other ISO standards can be used.

Virtual media provides the ability to perform additional tasks remotely, such as:

- Transferring files
- Running diagnostics
- Installing or patching applications
- Complete installation of the operating system

This expanded KVM control eliminates most trips to the data center, saving time and money, thereby making virtual media very powerful.

Diagram key			
	Desktop PC		CD/DVD drive
			USB mass storage device
	CIM		PC hard drive
	Target server		Remote file server (ISO images)

Prerequisites for Using Virtual Media

With the virtual media feature, you can mount up to two drives (of different types) that are supported by the USB profile currently applied to the target. These drives are accessible for the duration of the KVM session.

For example, you can mount a specific CD-ROM, use it, and then disconnect it when you are done. The CD-ROM virtual media “channel” will remain open, however, so that you can virtually mount another CD-ROM. These virtual media “channels” remain open until the KVM session is closed as long as the USB profile supports it.

The following conditions must be met in order to use virtual media:

- For users requiring access to virtual media, the device permissions must be set to allow access to the relevant ports, as well as virtual media access (VM Access port permission) for those ports. Port permissions are set at the group-level.
- A USB connection must exist between the device and the target server.
- If you want to use PC-Share, Security Settings must also be enabled in the Security Settings page. **Optional**
- You must choose the correct USB profile for the KVM target server you are connecting to.

Client PC

- Certain virtual media options require administrative privileges on the client PC (for example, drive redirection of complete drives).

Note: If you are using Microsoft Vista, turn User Account Control off: Control Panel > User Accounts > User Account Control > turn off.

If you would prefer not to change Vista account permissions, run Internet Explorer as an administrator. To do this, click the Start Menu, locate IE, right-click it and select Run as Administrator.

Target Server

- KVM target servers must support USB connected drives.
 - KVM target servers running Windows 2000 must have all of the recent patches installed.
 - USB 2.0 ports are both faster and preferred.
- **To use virtual media:**
- Connect/attach the media to the client or network file server that you want to access from the target server. This need not be the first step, but it must be done prior to attempting to access this media.

File Server Setup (File Server ISO Images Only)

Note: This feature is only required when using virtual media to access file server ISO images.

ISO9660 format is the standard supported by Raritan. However, other CD-ROM extensions may also work.

Use the Remote Console File Server Setup page to designate the files server(s) and image paths that you want to access using virtual media. File server ISO image(s) specified here will become available for selection in the Remote Server ISO Image Hostname and Image drop-down lists in the Map Virtual Media CD/ISO Image dialog. See CD-ROM/DVD-ROM/ISO Images.

- **To designate file server ISO images for virtual media access:**
1. Choose Virtual Media from the Remote Console. The File Server Setup page opens.
 2. Check the Selected checkbox for all media that you want accessible as virtual media.
 3. Enter information about the file server ISO images that you want to access:
 - IP Address/Host Name - Host name or IP address of the file server.
 - Image Path - Full path name of the location of the ISO image.

Note: The host name cannot exceed 232 characters in length.

- Click Save. All media specified here will now be available for selection in the Map Virtual Media CD/ISO Image dialog.

Home > File Server Setup

File Server Setup

IP Address/Host Name: Enter name of the host name or IP Address of shared drive containing ".iso" image.
Image Path: Enter path to ".iso" image on shared drive. Do not include host name or IP Address in the path.

Selected	IP Address/Host Name	Image Path
<input type="checkbox"/>		
<input type="checkbox"/>		
<input type="checkbox"/>		
<input type="checkbox"/>		
<input type="checkbox"/>		
<input type="checkbox"/>		
<input type="checkbox"/>		
<input type="checkbox"/>

<input type="checkbox"/>		
<input type="checkbox"/>		

Save Cancel

Using Virtual Media

With the virtual media feature, you can mount up to two drives (of different types) that are supported by the USB profile currently applied to the target. These drives are accessible for the duration of the KVM session.

For example, you can mount a specific CD-ROM, use it, and then disconnect it when you are done. The CD-ROM virtual media "channel" will remain open, however, so that you can virtually mount another CD-ROM. These virtual media "channels" remain open until the KVM session is closed as long as the USB profile supports it.

- The following conditions must be met in order to use virtual media:
- You must choose the correct USB profile for the KVM target server you are connecting to.

Client PC

- Certain virtual media options require administrative privileges on the client PC (for example, drive redirection of complete drives).

Note: If you are using Microsoft Vista, turn User Account Control off: Control Panel > User Accounts > User Account Control > turn off.

If you would prefer not to change Vista account permissions, run Internet Explorer as an administrator. To do this, click the Start Menu, locate IE, right-click it and select Run as Administrator.

Target Server

- KVM target servers must support USB connected drives.
 - KVM target servers running Windows 2000 must have all of the recent patches installed.
 - USB 2.0 ports are both faster and preferred..
1. If you plan to access file server ISO images, identify those file servers and images through the Remote Console File Server Setup page. See **File Server Setup (File Server ISO Images Only)** (on page 145).

Note: ISO9660 format is the standard supported by Raritan. However, other CD-ROM extensions may also work.

2. Open a KVM session with the appropriate target server.
 - a. Open the Port Access page from the Remote Console.
 - b. Connect to the target server from the Port Access page:
 - Click the Port Name for the appropriate server.
 - Choose the Connect command from the Port Action menu. The target server opens in a Virtual KVM Client window.
3. Connect to the virtual media.

For:	Select this VM option:
Local drives	Local Drives (on page 148)
Local CD/DVD drives	CD-ROM/DVD-ROM/ISO Images
ISO Images	Connect CD-ROM/ISO Image
File Server ISO Images	Connect CD-ROM/ISO Image

Upon completion of your tasks, disconnect the virtual media. See **Disconnecting Virtual Media** (on page 151).

Connecting to Virtual Media

Local Drives

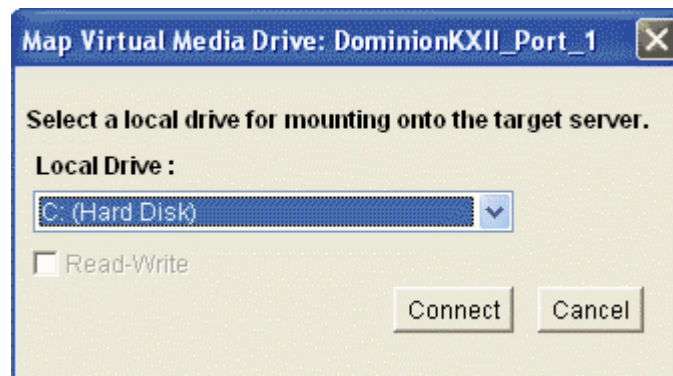

This option mounts an entire drive, which means the entire disk drive is mounted virtually onto the target server. Use this option for hard drives and external drives only. It does not include network drives, CD-ROM, or DVD-ROM drives. This is the only option for which Read/Write is available.

Note: KVM target servers running certain versions of the Windows operating system may not accept new mass storage connections after an NTFS-formatted partition (for example, the local C drive) has been redirected to them.

If this occurs, close the Remote Console and reconnect before redirecting another virtual media device. If other users are connected to the same target server, they must also close their connections to the target server.

► To access a drive on the client computer:

1. From the Virtual KVM Client, choose Virtual Media > Connect Drive. The Map Virtual Media Drive dialog appears.

2. Choose the drive from the Local Drive drop-down list.
3. If you want Read and Write capabilities, select the Read-Write checkbox. This option is disabled for nonremovable drives. See the **Conditions when Read/Write is Not Available** (on page 149) for more information. When checked, you will be able to read or write to the connected USB disk.

WARNING: Enabling Read/Write access can be dangerous! Simultaneous access to the same drive from more than one entity can result in data corruption. If you do not require Write access, leave this option unselected.

4. Click Connect. The media will be mounted on the target server virtually. You can access the media just like any other drive.

Conditions when Read/Write is Not Available

Virtual media Read/Write is not available in the following situations:

- For all hard drives.
- When the drive is write-protected.
- When the user does not have Read/Write permission:
 - Port Permission Access is set to None or View.
 - Port Permission VM Access is set to Read-Only or Deny.

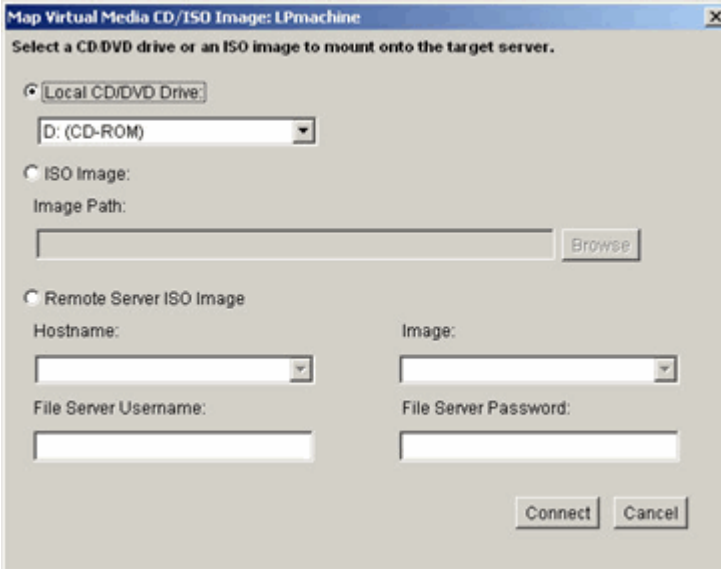

CD-ROM/DVD-ROM/ISO Images

This option mounts CD-ROM, DVD-ROM, and ISO images.

Note: ISO9660 format is the standard supported by Raritan. However, other CD-ROM extensions may also work.

► To access a CD-ROM, DVD-ROM, or ISO image:

1. From the Virtual KVM Client, choose Virtual Media > Connect CD-ROM/ISO Image. The Map Virtual Media CD/ISO Image dialog appears.

The dialog box titled "Map Virtual Media CD/ISO Image: LPmachine" contains the following elements:

- A title bar with a close button (X).
- Instruction text: "Select a CD/DVD drive or an ISO image to mount onto the target server."
- Three radio buttons for selection:
 - Local CD/DVD Drive:** This option is selected. Below it is a dropdown menu showing "D: (CD-ROM)".
 - ISO Image:** Below this is an "Image Path:" label and a text input field with a "Browse" button to its right.
 - Remote Server ISO Image:** Below this are four input fields: "Hostname:", "Image:", "File Server Username:", and "File Server Password:", each with a corresponding text box.
- At the bottom right, there are "Connect" and "Cancel" buttons.

2. For internal and external CD-ROM or DVD-ROM drives:
 - a. Choose the Local CD/DVD Drive option.

- b. Choose the drive from the Local CD/DVD Drive drop-down list. All available internal and external CD and DVD drive names will be populated in the drop-down list.
 - c. Click Connect.
 3. For ISO images:
 - a. Choose the ISO Image option. Use this option when you want to access a disk image of a CD, DVD, or hard drive. ISO format is the only format supported.
 - b. Click the Browse button.
 - c. Navigate to the path containing the disk image you want to use and click Open. The path is populated in the Image Path field.
 - d. Click Connect.
 4. For remote ISO images on a file server:
 - a. Choose the Remote Server ISO Image option.
 - b. Choose Hostname and Image from the drop-down lists. The file servers and image paths available are those that you configured using the File Server Setup page. Only items you configured using the File Server Setup page will be in the drop-down list. See **File Server Setup (File Server ISO Images Only)** (on page 145) for more information.
 - c. File Server Username - User name required for access to the file server.
 - d. File Server Password - Password required for access to the file server (field is masked as you type).
 - e. Click Connect.

The media will be mounted on the target server virtually. You can access the media just like any other drive.

Note: If you are working with files on a Linux target, use the Linux Sync command after the files are copied using virtual media in order to view the copied files. Files may not appear until a sync is performed.

Note: You cannot access a remote ISO image via virtual media using an IPv6 address due to technical limitations of third-party software used by the KX2.

Disconnecting Virtual Media

► **To disconnect the virtual media drives:**

- For local drives, choose Virtual Media > Disconnect Drive.
- For CD-ROM, DVD-ROM, and ISO images, choose Virtual Media > Disconnect CD-ROM/ISO Image.

Note: In addition to disconnecting the virtual media using the Disconnect command, simply closing the KVM connection closes the virtual media as well.

Chapter 5 Raritan Serial Console

The standalone Raritan Serial Console (RSC) is used to make direct connections to a serial target without going through the device. The user specifies the device address and the port number (target), and is then connected.

In This Chapter

RSC System Requirements.....	152
Installing RSC on Windows	157
Installing RSC for Sun Solaris and Linux	159
Opening RSC from a Remote Console	160
Raritan Serial Console Interface	162

RSC System Requirements

The following requirements must be met to support the Raritan Serial Console:

- The RSC will function with JRE version 1.4.2_05 or later (except for JRE version 1.5.0_02). However, for optimum performance, Raritan recommends using JRE 1.5.0 (except for version 1.5.0_02).
- Your system may require configuration adjustments depending on the operating system and browser. The JRE provides configuration instructions with the JRE download. Browse to the page at **<http://www.java.com/en/download/help/testvm.xml>** (<http://www.java.com/en/download/help/testvm.xml> or <http://www.java.com/en/download/help/testvm.xml>) to determine the JRE version currently installed on your system. If you do not have a compatible version of the JRE, go to **<http://www.java.com>** (<http://www.java.com>) and click the Download Now button.

Note: Raritan does not support JRE version 1.5.0_02 for use with the RSC.

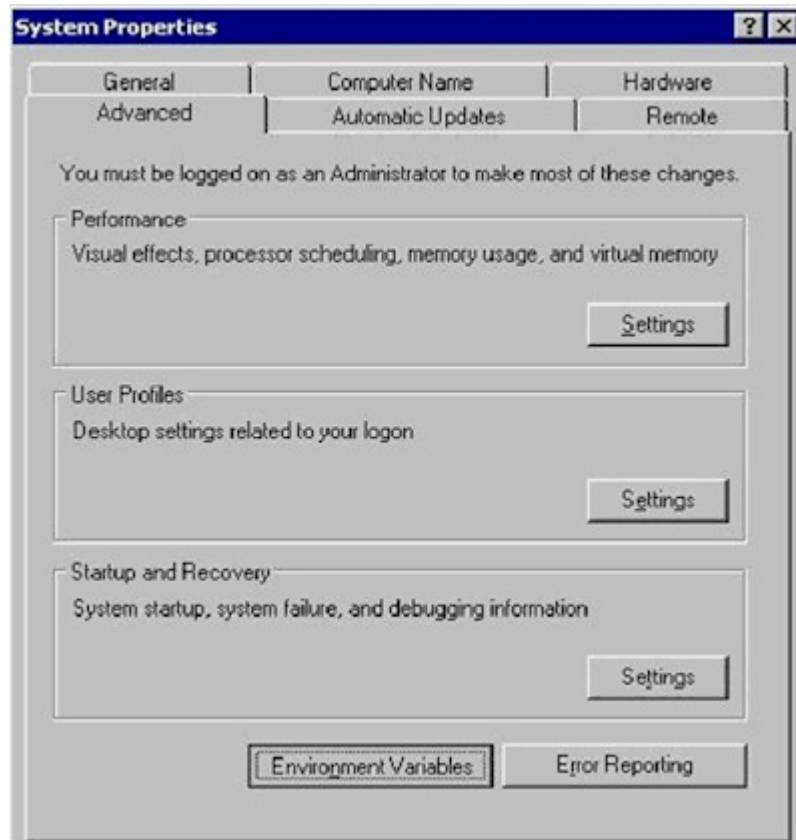

- Minimum 1 GHz PC with 512 MB RAM.

Ensure that Java can be started from the command line. To do this, environment variables must be configured. Make a note of the exact path where Java was installed. (The path information will be used later.)

Setting Windows OS Variables

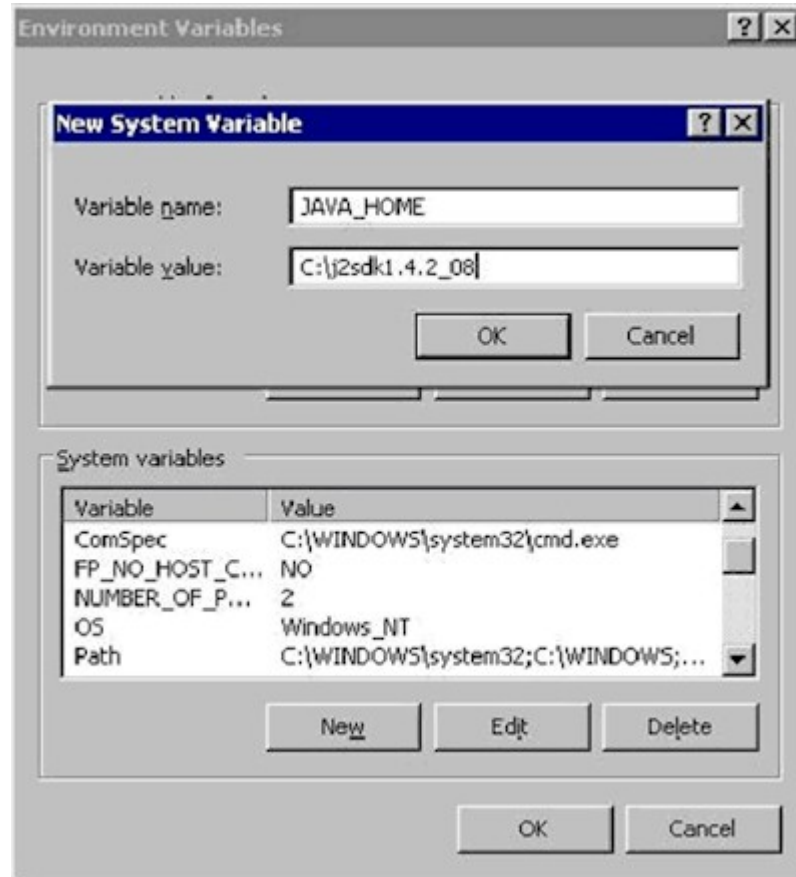

1. Choose Start > Control Panel > System.

2. Click the Advanced tab and then click Environment Variables.

3. In the System variables section, click New.

4. In the New System Variable dialog, add JAVA_HOME to the Variable name block and the path you wrote down earlier in the Variable value block.

5. Click OK.
6. Select the PATH variable and click Edit.
7. Add %JAVA_HOME%\bin to the end of the current Variable value. Ensure a semicolon (;) separates the new value from the last value in the string.

8. Click OK.

9. Select the CLASSPATH variable and click Edit.
10. Ensure the CLASSPATH Variable value is configured properly; that is, its value must have a period (.) in it. If, for any reason, there is no CLASSPATH variable defined, create one.

Setting Linux OS Variables

To set Java for a specific user, open and edit the `.profile` file located in the `/home/Username` folder.

To set Java for all users, open the `.profile` file in your `/etc` folder:

1. Find the line where you set your path:

```
export
PATH=$PATH:/home/username/somefolder
```

2. Before that line you must set your `JAVA_HOME` and then modify your `PATH` to include it by adding the following lines:

```
export
JAVA_HOME=/home/username/j2sdk1.4.2/
export PATH=$PATH:$JAVA_HOME/bin
```

3. Save the file.

Setting UNIX OS Variables

To check the latest JRE version on Sun Solaris:

1. Launch a terminal window on the Sun Solaris desktop.
2. Type `java -version` in the command line and press Enter. The currently-installed version of Java Runtime Environment (JRE) appears.
 - If your path variable is not set to where the Java binaries have been installed, you may not be able to see the JRE version.
 - Assuming JRE 1.4.2_05 is installed in `/usr/local/java`: you must set your `PATH` variable.
 - To set a path for the bash shell:

```
export
PATH=$PATH:/usr/local/java/j2re1.4.2_05/bin
```

- To set path for `tcsh` or `csh`:

```
set
PATH = ($PATH /usr/local/java/j2re1.4.2_05/bin)
```

- These commands can either be typed at the terminal each time you log in, or you can add them to your `.bashrc` for bash shell or `.cshrc` for csh and tcsh so that each time you log in, the path is already set. See your shell documentation if you encounter problems.

```

# java -version
java version "1.4.2_05"
Java(TM) 2 Runtime Environment, Standard Edition (build 1.4.2_05-b04)
Java HotSpot(TM) Client VM (build 1.4.2_05-b04, mixed mode)
#

```

3. If the JRE is version 1.4.2_05 or later, proceed with the RSC installation. If the JRE is version 1.5.0_02 or is an older version than 1.4.2_05, go to the Sun website at (<http://java.sun.com/products/>) to download the latest Runtime Environment.

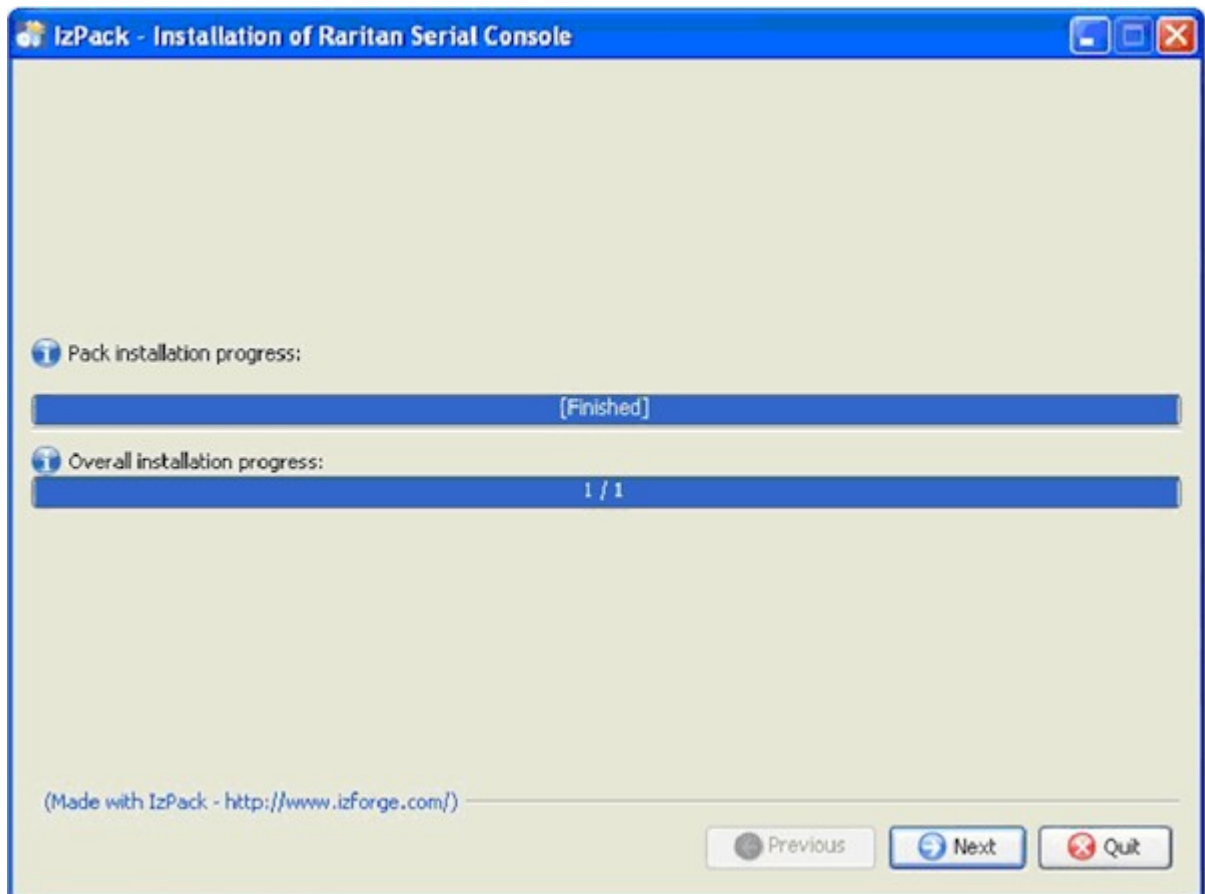

Installing RSC on Windows

You must have administrative privileges to install RSC.

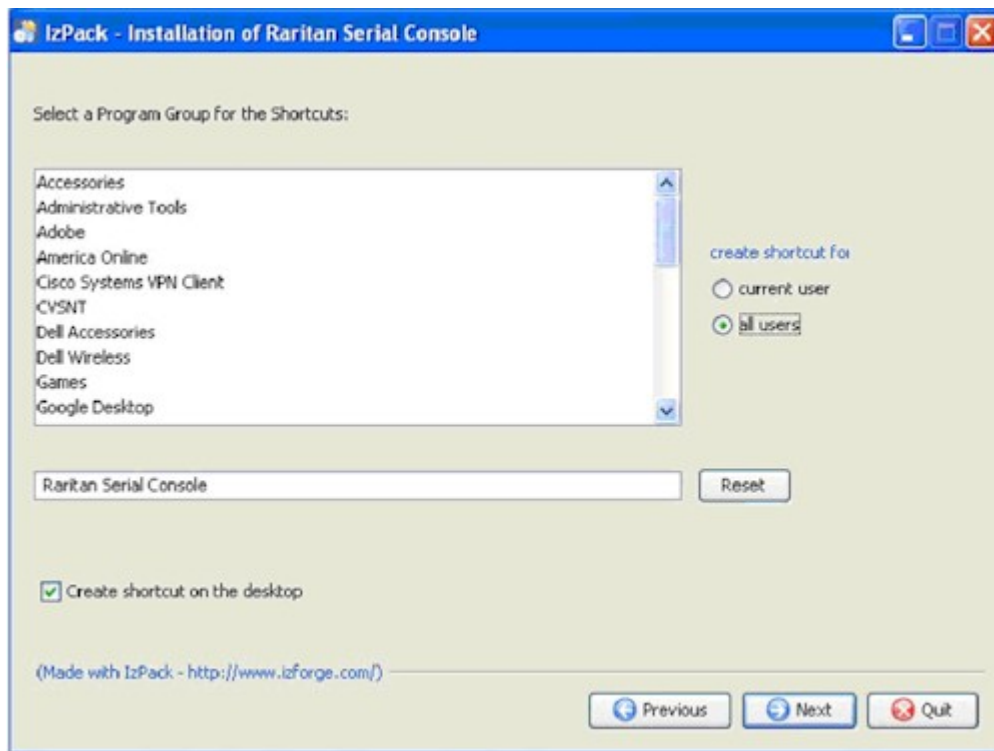

► To install RSC on Windows:

1. Log on to a Windows machine.
2. Download, or copy from a known location, the RSC-installer.jar installation file.
3. Double-click the executable file to start the installer program. The splash page appears.
4. Click Next. The installation path page appears.
5. Change the path, if desired.
6. Click Next. The installation progress page appears.

Note: The standalone version of Raritan Serial Console (RSC) is available from the Raritan website (www.raritan.com) on the Support page.

7. Click Next. The Windows shortcut page appears.

8. Specify the desired Program Group for the shortcut.
9. Click Next. The installation finished page appears.
10. Click Done.

Installing RSC for Sun Solaris and Linux

You must have administrative privileges to install RSC.

1. Log in to your Sun Solaris machine.
2. Download, or copy from a known location, the RSC-installer.jar installation file.
3. Open a terminal window and change to the directory where the installer is saved.
4. Type `java -jar RSC-installer.jar` and press Enter to run the installer.
5. Click Next after the initial page loads. The Set Installation Path page opens.
 - a. Select the directory where you want to install RSC and click Next.
 - b. Click Browse to navigate to a non-default directory.

- c. Click Next when the installation is complete.
 - d. Click Next again. The installation is complete. The final page indicates where you will find an uninstaller program and provides the option to generate an automatic installation script.
6. Click Done to close the Installation dialog.

Opening RSC from a Remote Console

► To open the Raritan Serial Console (RSC) from the Remote Console:

1. Select the Port Access tab.

Port Number	Port Name	Port Type	Status	Availability
1	Win Target	VM	up	idle
2	Dominion_KSX2_Port2	Not Available	down	idle
3	Dominion_KSX2_Port3	Not Available	down	idle
4	KSX-G2 Admin	VM	up	idle
5	Dominion_KSX2_Port5	Not Available	down	idle
6	Dominion_KSX2_Port6	Not Available	down	idle
7	Dominion_KSX2_Port7	Not Available	down	idle
8	Dominion_KSX2_Port8	Not Available	down	idle
9	Cisco 2501	Serial	up	idle
10	SP-2	Serial	up	idle
11	Serial Port 3	Serial	up	idle
12	Serial Port 4	Serial	up	idle
13	SP - 5	Serial	up	idle
14	Serial Port 6	Serial	up	idle
15	Serial Port 7	Serial	up	idle
16	Serial Port 8	Serial	up	idle

2. Click the name of the serial port you want to access for the RSC.

Note: A security pop-up screen appears only if you used https to connect to the RSC.

3. If you're using Dominion DSX:
 - Click Yes. A Warning - Security pop-up screen appears.
 - Click Yes to access the Raritan Serial Console from the Port page.

Note: If you click Always, you will not receive the security page for future access.

- The Raritan Serial Console window appears. For information, see **Raritan Serial Console Interface** (on page 162) section in this chapter.

If you're using Dominion KSX or KX:

- Click Connect to start connecting to the target port for RSC, and the Raritan Serial Console window appears.
- The Raritan Serial Console window appears.

Note: You can download the standalone Raritan Serial Console from the Raritan website (www.raritan.com) on the Support page.

► **To open RSC from the Windows desktop:**

1. Double-click the shortcut or use the Start menu to open the standalone RSC. The Raritan Serial Console Login connection properties window appears.
2. Enter the device's IP address, account information, and the desired target (port).
3. Click Start. RSC opens with a connection to the port.

Note: If you experience unrecognized characters or blurry pages in the RSC window due to localization support, try changing the font to Courier New. Click Emulator > Settings > Display and select Courier New for Terminal Font Properties or GUI Font Properties.

Note: When RSC connects to a serial target, hitting Ctrl + _ or Ctrl + ^ + _ does not cause information to be sent. However, hitting the Ctrl + Shift + _ or the Ctrl + Shift + ^ will cause information to be sent.

► **To open RSC on Sun Solaris:**

1. Open a terminal window and change to the directory where you installed the RSC.
2. Type `./start.sh` and press Enter to open RSC.
3. Double-click the desired device to establish a connection.
4. Type your user name and password.
5. Click OK to log on.

Raritan Serial Console Interface

Important: The Raritan Serial Console page usually opens in a separate window behind the Port page. With some versions of Java on Windows, the page opens in front of the Port page.

Default RSC Option Values

The following default values apply to the GUI font properties, colors and fonts defined in RSC:

Item	Value
Font properties	Lucida Console
GUI font properties	Lucida Console
Colors	Black foreground and white background

Emulator

1. Change the default user Idle Timeout setting before launching the RSC for the first time or it will timeout in 10 minutes and display a host termination message.
2. Click the Emulator drop-down menu to display a list of topics.

Settings

1. Choose Emulator > Settings. The Settings page displays the General tab with the default settings.

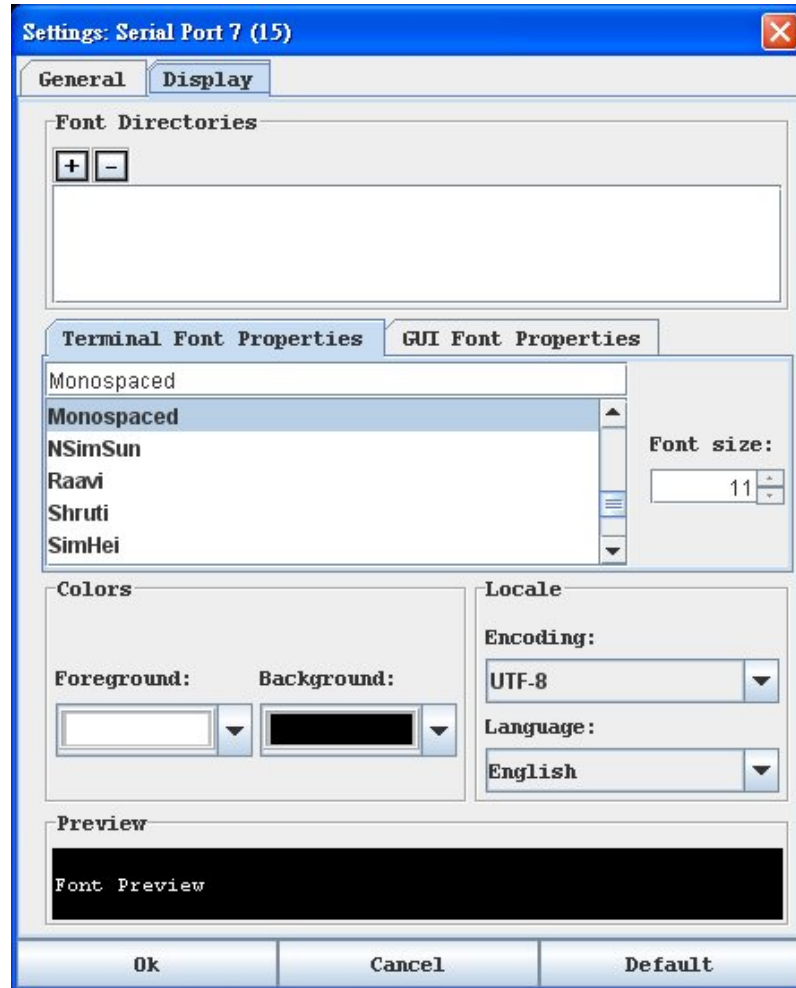

2. Accept the Main Menu Shortcut default of None or choose one of the following from the Main Menu Shortcut drop-down menu:
 - F10
 - Alt
3. Accept the Show Confirmation Dialog on Exit default or uncheck it.
4. Accept the Terminal Size default or choose a size from the Terminal Size drop-down menu.
5. Accept the Backspace Sends default of ASCII DEL or choose Control-H from the Backspace Sends drop-down menu.
6. Accept the History Buffer Size default of 75 or use the arrows to change the buffer size.

7. Accept the Cursor type default of Block Cursor or select Line Cursor.
8. Click OK.

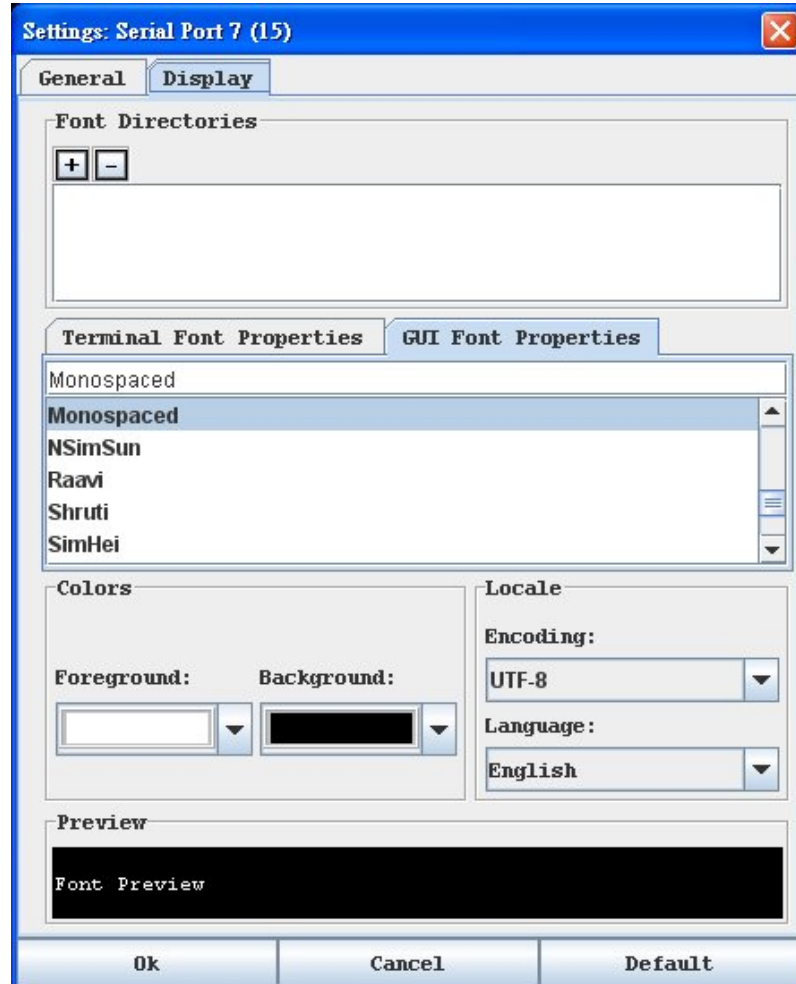

Display Settings

1. Choose Emulator > Settings, and then click the Display tab.

2. Click Default to accept the Default settings. Then click Ok to close the Display Settings dialog. However, if you want to change the settings, perform the following steps:
3. Accept the Terminal Font Properties default of Lucida Console or choose a font from the scrolling list of Terminal Font Properties.
4. If you want to change the size of the font, choose a font size by clicking the up or down arrows. The result of selected font and font size is displayed in the Preview box.

5. Click the GUI Font Properties tab and accept the default of Lucida Console or choose a font from the scrolling list of GUI Font Properties.

Note: For Simplified Chinese characters, Raritan Serial Console supports EUC-CN encoding system.

6. Choose the following from their drop-down menus:
 - Foreground Color
 - Background Color
7. Choose one of the following from the Encoding drop-down menu:
 - US-ASCII
 - ISO-8859-1
 - ISO-8859-15

- UTF-8
 - Shift-JIS
 - EUC-JP
 - EUC-CN
 - EUC-KR
8. Choose one of the following from the Language drop-down menu:
 - English
 - Bulgarian
 - Japanese
 - Korean
 - Chinese
 9. Click Ok to close the Display Settings dialog. If you changed the Language setting, the RSC changes to that language when the Display Settings dialog is closed.

Note: If you experience unrecognized characters or blurry pages in the RSC window due to localization support, try changing the font to Courier New.

Get History

History information can be useful when debugging, troubleshooting, or administering a target device. The Get History feature allows you to view the recent history of console sessions by displaying the console messages to and from the target device.

When the size limit is reached, the text will wrap, overwriting the oldest data with the newest.

Note: The history data is displayed only to the user who requested the history.

- To view the session history, choose Emulator > Get History.

Clear History

- To clear the history, choose Emulator > Clear History.

Get Write Access

Only administrators and operators can get Write access. The user with Write access can send commands to the target device. Write access can be transferred among users working in the Raritan Serial Console via the Get Write Access command.

To enable Write access, choose Emulator > Write Access.

- You now have Write access to the target device.
- When another user assumes Write access from you,
 - The RSC displays a red block before Write access in the status bar.
 - A message alerting the user who currently has Write access appears to tell that user that another user has taken over access to the console.

Get Write Lock

- Choose Emulator > Get Write Lock. If the Get Write Lock is not available, a request rejected message appears.

Write Unlock

- Choose Emulator > Write Unlock.

Send Break

Some target systems, such as Sun Solaris servers, require the transmission of a null character (break) to generate the `OK` prompt. This is equivalent to issuing a STOP-A from the Sun keyboard.

- Only users with Administrator privileges can send a break.
- Users who are Operator or Observers cannot send a break.

► **To send an intentional break to a Sun Solaris server:**

1. Verify that you have Write access. If not, follow the instructions in the previous section to obtain Write access.
2. Choose Emulator > Send Break. A Send Break Ack (Acknowledgement) pop-up appears.
3. Click OK.

Connected Users

The Connected Users command allows you to view a list of other users who are currently connected on the same port.

1. Choose Emulator > Connected Users, a Connected Users page is displayed.

2. A check mark appears in the Write access column after the name of the user who has Write access to the console.
3. Click Close to close the Connected Users window.

Exit

1. Choose Emulator > Exit to close the Raritan Serial Console. The Exit Confirmation page appears.
2. Click Yes.

Edit

Use the Copy, Paste, and Select All text commands to relocate and/or re-use important text.

► To copy and paste all text:

1. Choose Edit > Select All.
2. Choose Edit > Copy.
3. Position the cursor at the location where you want to paste the text.
4. Click once to make that location active.
5. Choose Edit > Paste.

Note: The text copy limit in Raritan Serial Console is 9999 lines.

Keyboard shortcuts that you can use to highlight, copy, and paste all or partial lines of text:

- Click and drag your mouse over the text you wish to copy.
- Use Ctrl+C to copy text.
- Position the cursor where you want to paste the text and click in that location to make it active.
- Use Ctrl+V to paste text.

Tools

Click the Tools menu to display a list of topics.

Start Logging

The Start Logging function allows you to collect raw console data from the target device and save it to a file on your computer. When you start RSC, the Logging indicator on the status bar indicates whether logging is on or off.

1. Choose Tools > Start Logging.
2. Choose an existing file or provide a new file name in the Save RSC Log dialog.
 - When an existing file is selected for logging, data gets appended to the contents.
 - If you provide a new file name, a new file is created.

3. Click Save after selecting or creating a file.

Stop Logging

Choose Tools > Stop Logging. The logging stops.

Send Keystroke

1. Choose Tools > Send Keystroke. A Send Keystroke dialog appears:

2. Enter the keystroke combinations that you want and select a Key Code name from the drop-down menu.
3. Send the keystroke combinations.

Send Text File

1. Choose Tools > Send Text File. A Send Text File screen appears.
2. Open the directory of the Text file.
3. Click on or enter the File Name of the Text file.
4. Click Open.
 - When you click Open, it sends whatever file you selected directly to the port.
 - If there is a loopback plug inserted, you will see the file displayed.
 - If there is currently no target connected, then nothing will be visible on the screen.

Toggle Power

The Toggle Power function lets you power on or off the device that is connected to the associated outlet on a Power Distribution Unit (PDU). For example, if a router is connected to one of the outlets on the PDU, you can toggle the router's power on or off.

You must configure the association of outlets to the target port of the device before you can use the Toggle Power feature. Go to the Power Control tab on remote console's GUI to configure the outlets. If you have not done this, the system displays a message stating that the target is not associated with a power outlet.

1. Select Toggle Power to turn the device (router) on or off. A prompt appears displaying the current status of the outlet(s). You can turn the device on or off depending on its current status.
2. If you select No, the system returns you to the RSC screen.
3. If you select Yes, the system sends the power command to either turn on or off the outlets associated to the target port of the device.

If you receive a:

- Hardware error message: this means that the PDU command failed.

Software error message: this means that another user is controlling the power outlet and the power control command cannot be sent.

Chat

When using browser access over SSL, an interactive chat feature called Chat allows you and other users on the same port to communicate. You can conduct an online dialog for training or collaborative diagnostic activities. The maximum length of a chat message is 300 characters.

Note: When a chat is initiated, a chat window appears on the monitors of all SSL users logged on to the port. If a user is logged into a port multiple times, multiple chat messages will not appear to that user.

► **To open chat:**

- Choose Chat > Chat.

► **To clear text in a chat text box:**

- Click Clear to delete the typed text.

Help

Help Topics include online assistance for operating the Raritan Serial Console and release information about Raritan Serial Console.

Help Topics

► **To access help topics:**

- Choose Help > Help Topics.

About Raritan Serial Console

The About Raritan Serial Console dialog displays the copyright and version information (name and revision number) of the console terminal emulation software. When contacting Raritan for technical support or when performing a software upgrade, you may be asked for this information.

► **To access 'About' information:**

- Choose Help > About Raritan Serial Console. An About Raritan Serial Console message appears.
