

Dominion SX 2.5 Technical Bulletin

Release Date: 8 September 2005

Last Updated: 8 September 2005

Description

A method is needed to backup and restore configuration of one or more Dominion SX units. This should be possible from the Command Line Interface (SSH/Telnet) as well as from CommandCenter

Resolution

From the CLI, this capability is supported in the Dominion SX2.5 release. When backing up and restoring the Dominion SX ensure that an FTP server is running on the PC/server that the backup and restore commands are issued from:

backup [ip IP] <login LOGIN> <passwd PASSWD> [path PATH] [file FILE]

restore[ip IP] <login LOGIN> <passwd PASSWD> [path PATH] [file FILE]

It is highly desirable that the FTP server has a log that can be viewed to check FTP transactions. From CommandCenter Secure Gateway version 2.3 or higher, this capability is supported. See the Command Center User Guide for how to accomplish this capability.

Only configurations backed up from like models can be restored to another unit. For example, a configuration from a DSX32 can only be backed up to another DSX32, but not to a DSX4 unit.

Hardware platforms affected

All Dominion SX models running firmware version SX2.5.

Raritan Computer Inc.
400 Cottontail Lane
Somerset, NJ 08873
